

Table of Contents

	Page
1 General Properties of the Thorium Atom and Thorium Ions	1
1.1 Introduction	1
1.2 Electronic Structure	2
1.3 Metallic Radius	6
1.4 Ionic Radii	6
1.5 Coordination Numbers	7
1.6 Oxidation-Reduction Potentials	8
1.7 Excited Electronic Configurations	10
1.8 Spin-Orbit Coupling Parameters, Radial Integrals	10
1.9 Ionization Potentials	12
1.10 Magnetic Susceptibility	13
2 Spectra	17
2.1 The Atomic Spectroscopy of Thorium	17
2.1.1 Historical Background	17
2.1.2 General Description of Thorium Spectra	17
2.1.3 Line Lists and Energy Levels	18
Th I	18
Th II	48
Th III	66
Th IV	79
Higher Ion Stages	81
2.1.4 Ionization Potentials	81
2.1.5 Zeeman Studies	82
2.1.6 Isotope Shifts	82
2.1.7 Hyperfine Structure	83
2.1.8 Transition Probabilities	84
2.1.9 Wavelength Standards	85
2.2 Absorption Spectra	88
2.3 Thorium X-Ray Spectra	90

	Page
2.3.1 X-Ray Emission Spectra	90
General Remarks	90
Energies, Wavelengths	90
Radiative and Nonradiative Transition Probabilities, Intensities, Line Widths, Fluorescence Yields	91
X-Rays from Ion-Ion Collisions	91
The K Series	92
Emission Lines	92
Transition Probabilities, Intensities, Line Widths	93
Fluorescence Yield	94
The L Series	95
Emission Lines	95
Transition Probabilities, Intensities, Line Widths	96
Fluorescence Yields	97
The M Series	100
Emission Lines	100
Radiative Rates, Fluorescence Yields, Level Widths	100
The N and O Series	102
Emission Lines	102
Radiative Rates, Fluorescence Yields, Level Widths	102
2.3.2 Auger and Coster-Kronig Transitions	103
2.3.3 Absorption Edges	106
2.3.4 Muonic X-Rays	106
2.4 Photoemission Spectra	110
2.4.1 Introduction	110
2.4.2 Core Levels	111
Binding Energies – Thorium Metal	111
Intensities	113
Satellites	113
2.4.3 Thorium Metal	117
Valence Bands	117
Chemisorption	119
2.4.4 Intermetallic Compounds and Alloys	119
NaCl-Type Compounds	120
Angle-Resolved UPS–ThPd ₃ and UPd ₃	122
Other Th and U Alloys and Intermetallic Compounds	125
Thorium Hydrides and Hydrogen Absorption	127
Catalytic Activity	128
2.4.5 Oxygen Compounds	129
ThO ₂ and UO ₂ – Electronic Structure	129
Binding Energies of Thorium-Oxygen Compounds	130
2.4.6 Thorium-Halogen Compounds	132
2.4.7 Organometallic Complexes	134

	Page
2.5 Electron Paramagnetic Resonance (EPR)	137
2.6 Nuclear Magnetic Resonance (NMR)	139
2.7 Mössbauer Spectroscopy	140
2.8 Thorium Mass Spectrometry	143
2.8.1 Measurement of Atomic Mass of Thorium by Mass Spectrometry	143
2.8.2 The Ionization Potential of Thorium by Mass Spectrometry	144
2.8.3 Phase Equilibria, Vaporization Processes, and Thermochemical Studies of Thorium Compounds Using Mass Spectrometry	145
Introduction	145
The Thorium-Oxygen System	147
The Thorium-Nitrogen System	151
The Thorium-Fluorine System	151
The Thorium-Iodine System	151
The Thorium-Carbon System	152
The NaF-ThF ₄ System	156
The UO ₂ -ThO ₂ System	157
Intermetallic Systems Containing Thorium	158
The Thorium-Ozone System	160
2.8.4 Structural Chemistry of Thorium-Containing Complexes Using Mass Spectrometry	162
2.8.5 Analytical Mass Spectrometric Techniques for Thorium	163
Thermal Ionization Mass Spectrometry (TIMS)	163
Isotope Dilution Mass Spectrometry (IDMS)	165
Field Desorption and Field Ionization Mass Spectrometry (FDMS and FIMS)	167
Spark Source Mass Spectrometry (SSMS)	168
Inductively Coupled Plasma Mass Spectrometry (ICPMS)	170
Resonance Ionization Mass Spectrometry (RIMS)	171
Scanning Laser Mass Spectrometry Milliprobe (SLMS)	172
Secondary Ionization Mass Spectrometry (SIMS)	173
3 Chemical Thermodynamic Properties – Selected Values	175
4 Effects of Ionizing Radiations	191
Introduction	191
Metals and Alloys	191
Refractory Compounds	193
Other Compounds	196
5 Thorium Recoil Reactions	199
5.1 Introduction	199

	Page
5.2 Primary Energy, Differential Energy Loss, and Range of Thorium Recoils	201
5.3 Charge States of Energetic Thorium Species	210
5.4 Physical Consequences of Energetic Motion of Thorium	217
5.5 Classic Hot Atom Chemistry	225
5.6 Thorium Recoils in Geochemistry	228
5.7 A New Model of α-Recoil Chemistry	240
 Physical Constants and Conversion Factors	 247
