1 With Alkali Metals	1
1.1 Rules for the Miscibility of Uranium with Alkali and Alkaline Earth Metals . . .	1
1.2 The Influence of Nonmetals on the U – M Systems	3
1.3 Uranium – Lithium	5
1.3.1 Phase Diagram	5
1.3.2 Preparation of Alloys	6
1.3.3 Physical Properties	6
1.3.4 Chemical Reactions	6
1.3.5 Use of U – Li Alloys	6
1.3.6 Ternary Systems	7
1.4 Uranium – Sodium	7
1.4.1 Phase Diagram	7
1.4.2 Preparation of Alloys	8
1.4.3 Physical Properties	9
1.4.4 Chemical Reactions	9
1.4.5 Uses of U – Na Alloys	10
1.4.6 Ternary Systems	10
1.5 Uranium – Potassium	11
1.6 Uranium – Rubidium	12
1.7 Uranium – Caesium	12
1.8 Uranium – Francium	13
 2 With Alkaline Earth Metals	 14
2.1 Uranium – Beryllium	14
2.1.1 Phase Diagram	14
2.1.2 Preparation of Alloys	16
2.1.3 UBe ₁₃	18
Preparation and Formation	18

	Page
Heat of Formation	19
Physical Properties	19
General Remarks	19
Crystal Structure of UBe_{13}	20
Electronic Structure	23
Density, Thermal Expansion	28
Elastic Constants. Compressibility	29
Hardness	29
Ultrasonic Attenuation	30
Phonon Dispersion	31
Heat Capacity, Enthalpy, Entropy	33
Thermal Conductivity	36
Magnetic Susceptibility	37
Electrical Resistivity	39
Magnetoresistance and Hall Effect	40
Thermoelectric Power	43
Superconductivity	43
Heavy-Fermion Superconductivity	43
Josephson Effect	48
The Influence of Magnetic Fields on the Superconductivity	49
Photoelectron Emission	52
Raman Scattering	53
NMR Spectra	53
Optical Spectra, Reflectance	54
2.1.4 Chemical Reactions of UBe_{13} and U–Be Alloys	55
2.1.5 Nuclear Properties and Irradiation Behavior	56
2.1.6 Uses of U–Be Alloys	57
2.1.7 Ternary Systems	57
Introduction	57
U–Be–Th	59
U–Be–Np	65
U–Be–Zr	65
U–Be–Nb	66
U–Be–RE	66
U–Be–M	67
U–Be–Mo	69
U–Be–Si	69
U–Be–Na	69
U–Be–C	69
2.2 Uranium – Magnesium	70
2.2.1 Phase Diagram	70
2.2.2 Preparation of Alloys	72
2.2.3 Structural Data	72
2.2.4 Physical Properties	72

	Page
2.2.5 Chemical Reactions	73
2.2.6 Uses of U—Mg Alloys	73
2.2.7 Ternary Systems	73
2.3 Uranium—Calcium	76
2.3.1 Phase Diagram	76
2.3.2 Preparation and Fabrication of Alloys	76
2.3.3 Physical Properties	76
2.3.4 Chemical Reactions	77
2.3.5 Uses of U—Ca Alloys	77
2.3.6 Ternary Systems	77
2.4 Uranium—Strontium	78
2.4.1 Phase Diagram	78
2.4.2 Preparation and Fabrication of Alloys	78
2.4.3 Structural Data	78
2.4.4 Physical Properties	78
2.4.5 Chemical Reactions	79
2.4.6 Uses of U—Sr Alloys	79
2.4.7 Ternary Systems	79
2.5 Uranium—Barium	80
2.5.1 Phase Diagram	80
2.5.2 Preparation and Fabrication of Alloys	80
2.5.3 Physical Properties	80
2.5.4 Chemical Reactions	80
2.5.5 Uses of U—Ba Alloys	80
2.5.6 Ternary Systems	80
2.6 Uranium—Radium	81
 3 With Metals of 3rd Main Group	 82
3.1 Uranium—Aluminium	82
3.1.1 Phase Diagram	82
3.1.2 Interdiffusion of Uranium and Aluminium	85

	Page
3.1.3 Uranium Dialuminide, UAl_2	88
Formation and Preparation	88
Preparation	88
Sintering	90
Single Crystals	90
Enthalpy, Free Enthalpy, and Entropy of Formation	91
Crystallographic Properties. Bonding. Lattice Dynamics	92
Mechanical Properties	95
Density	95
Hardness. Compressibility. Elasticity	95
Thermal Properties	97
Thermal Expansion	97
Melting Point	98
Heat Capacity and Thermodynamic Functions	98
Thermal Conductivity	100
Electrical Properties	101
Electronic Structure	101
Specific Resistivity	103
Thermoelectric Power	105
Hall Coefficient	106
Thermionic Emission	106
Optical Properties	107
Magnetic Properties	108
Magnetization	108
Magnetic Susceptibility	109
Magnetoresistance	111
Nuclear Magnetic Resonance	111
Chemical Reactions	113
Reactions with Elements	113
Reactions with Compounds	115
Uranium Dialuminide—Aluminium Dispersions, UAl_2 —Al	116
Preparation of UAl_2 —Al Dispersions and Fuel Plates	116
Interaction of UAl_2 and Al Matrix	116
Mechanical Properties	117
Neutron Irradiation of UAl_2 —Al Dispersion Fuel Elements	117
3.1.4 Uranium Trialuminide, UAl_3	118
Formation and Preparation	118
Preparation	118
Sintering	121
Single Crystals	121
Enthalpy, Entropy, and Gibbs Free Energy of Formation	121
Crystallographic Properties	123
Mechanical Properties	125
Thermal Properties	126
Thermal Expansion	126
Melting Point	126
Heat Capacity. Entropy	126

Specific Resistivity	128
Thermoelectric Power	129
Magnetic Properties	130
Chemical Reactions	130
Behavior on Heating	130
Reactions with Elements	130
Reactions with Compounds	132
Metallographic Etching	133
Uranium Trialuminide—Aluminium Dispersions, UAl_3 —Al	134
Preparation of UAl_3 —Al Dispersions and Fuel Plates	134
Interaction of UAl_3 and Al Matrix	134
Mechanical Properties	136
Thermal Expansion	136
Thermal Conductivity	136
Electrical Resistivity	136
Neutron Irradiation of UAl_3 —Al Dispersion Fuel Elements	136
3.1.5 Uranium Tetraaluminide, UAl_4	139
Formation and Preparation	139
Preparation	139
Single Crystals	141
Enthalpy, Entropy, and Gibbs Free Energy of Formation	142
Crystallographic Properties	143
Mechanical Properties	146
Microhardness	146
Thermal Properties	147
Thermal Expansion	147
Melting Point	147
Thermal Conductivity	147
Electrical Properties	148
Electronic Structure	148
Specific Resistivity	149
Magnetic Properties	150
Chemical Reactions	151
Behavior on Heating	151
Reaction in Oxygen or Air	151
Reactions with Compounds	152
Uranium Tetraaluminide—Aluminium Dispersions, UAl_4 —Al	153
Preparation of UAl_4 —Al Dispersions and Fuel Plates	153
Interaction of UAl_4 and Al Matrix	154
Physical Properties	154
Neutron Irradiation of UAl_4 —Al Dispersion Fuel Elements	155
3.1.6 Uranium—Aluminium Alloys	156
Uranium-Rich Alloys	156
Aluminium-Rich Alloys	158
Preparation	158
Physical Properties	160
Density	160
Thermal Expansion	160
Hardness	161
