Acknowledgement — V

Preface — VII

Introduction — 1

1 Units, constants and basic Laws — 3

- 1.1 Energy — 3
- 1.2 Power — 3
- 1.3 Electrical units — 4
 - 1.3.1 Voltage and current — 4
 - 1.3.2 Electrical charge — 4
- 1.4 Ohm's law — 5
- 1.5 Faraday's laws — 5
- 1.6 Notation of ions — 8

2 Fundamentals — 11

- 2.1 Electrochemical cells — 11
 - 2.1.1 A simple experiment — 11
 - 2.1.2 General aspects of the electrochemical cell — 12
 - 2.1.3 The Daniell element — 13
 - 2.1.4 More electrochemical cells — 16
 - 2.1.5 The lead accumulator — 19
 - 2.1.6 Some final remarks — 20
- 2.2 Electrochemistry and thermodynamics — 22
 - 2.2.1 The temperature dependence of ε_0 — 24
 - 2.2.2 The pressure dependence of ε_0 — 24
 - 2.2.3 The dependence of ε_0 on the concentrations a_i — 25
- 2.3 Electrolytes – ions in solution — 28
 - 2.3.1 The conductivity of electrolytes — 28
 - 2.3.2 Ions in the electrical field, mobility — 29
 - 2.3.3 Resistance and conductivity — 32
 - 2.3.3.1 Specific resistance — 33
 - 2.3.4 Strong and weak electrolytes — 38
 - 2.3.5 Transport number and mobility of single ions — 39
 - 2.3.6 Dependence of the conductivity from temperature and solvent — 43
 - 2.3.7 Ionic interaction in electrolyte solutions — 46
 - 2.3.8 The Debye–Hückel model — 46
- 2.4 The interface metal/electrolyte — 52

2.4.1	Electrocapillarity —	53
2.4.2	Theory and models of the double layer —	55
2.4.2.1	The excess charge Q_e —	58
2.4.2.2	The capacity C_d of the diffuse double layer —	59
2.4.2.3	The Gouy–Chapman–Stern model —	60
2.5	Kinetics of electrode processes —	64
2.5.1	Some preliminary remarks —	64
2.5.2	Overvoltage —	65
2.5.3	Charge transfer and activation energy —	66
2.5.4	Comparison of chemical and electrochemical kinetics —	70
2.5.5	Derivation of the current–overpotential equation —	71
2.5.6	The Butler–Volmer equation —	74
2.5.7	The Tafel behavior of the overpotential —	76
2.5.8	Reversible and irreversible electrode processes —	78
2.6	Mass transport —	79
2.6.1	Diffusion, migration and convection —	79
2.6.2	A general view —	80
2.6.3	The contribution of diffusion and of migration to the mass transport —	81
2.6.4	The role of supporting electrolytes —	83
2.6.5	Diffusion —	84
2.6.5.1	Fick’s laws of diffusion —	84
2.6.5.2	Linear diffusion to a planar electrode in an unstirred solution —	85
2.6.5.3	Mass transport in a stirred solution —	88
2.7	Adsorption and phase formation —	92
2.8	Solid electrodes and modern electrochemistry —	95
2.8.1	The electrode/electrolyte interface —	95
2.8.2	Electric conductivity of solids —	101
2.8.3	Electrons in solids —	101
3	Practical work in electrochemistry —	111
3.1	Instrumentation and methods —	111
3.2	The ingredients of an electrochemical experiment —	112
3.2.1	Cell design —	112
3.2.2	The working electrode —	116
3.2.3	The reference electrode —	117
3.2.4	The counter electrode —	118
3.2.5	The electrolyte solution —	118
3.3	Instrumentation —	119
3.3.1	Why are three electrodes used in an experiment? —	120
3.3.2	Potentiostat —	121
3.4	Experimental methods —	122

3.4.1	Chronoamperometry —	124
3.4.2	Planar rotating disk electrodes —	125
3.4.3	Cyclic voltammetry —	132
3.4.3.1	Reversible couples —	134
3.4.3.2	Irreversible couples —	136
3.4.4	Studying chemical reactions —	139
3.4.4.1	The CE system —	139
3.4.4.2	The EC system —	140
3.4.5	Polarography —	144
3.4.6	Cyclic voltammograms and adsorption —	146
3.4.7	Some final remarks —	149
4	Applications of electrochemistry —	151
4.1	Electroanalytical techniques —	151
4.1.1	Applications of potential measurements —	152
4.1.1.1	Standard electrode potentials —	152
4.1.1.2	Determination of solution products —	152
4.1.2	Determination of the pH value —	153
4.1.3	Glass electrode —	154
4.1.4	Potentiometry —	155
4.1.5	Coulometry —	157
4.1.6	Electrochemical sensors —	157
4.2	Industrial electrochemistry —	158
4.2.1	The electrochemical production of chlorine and sodium hydroxide —	159
4.2.2	Production of metals —	160
4.2.3	Fused salt electrolysis —	161
4.2.4	The electrolysis of water —	163
4.2.5	Organic synthesis —	164
4.3	Electrochemical generation and storage of energy —	166
4.3.1	Galvanic cells —	166
4.3.1.1	Some general aspects —	166
4.3.1.2	Nonrechargeable systems —	167
4.3.1.3	The zinc–mercury oxide battery —	168
4.3.1.4	Lithium batteries —	169
4.3.1.5	Rechargeable batteries (accumulators) —	169
4.3.2	Fuel cells —	170
4.3.3	Supercapacitors —	174
4.4	Metal deposition and corrosion —	176
4.4.1	Metal deposition —	176
4.4.2	Corrosion —	177
4.4.3	Electrochemical etching —	179

XII — Contents

Appendices — 181

Bibliography — 221

List of symbols — 223

Index — 225
