Preface — VII

1 Preliminaries — 1

- 1.1 Set Theoretic Basics — 1
 - 1.1.1 Some Terminology and Notations — 1
 - 1.1.2 Cardinality and Countability — 4
- 1.2 Terminology Related to Functions — 6
- 1.3 Upper and Lower Limits — 8
- 1.4 Fundamentals of Metric Spaces — 9
 - 1.4.1 Definition and Examples — 9
 - 1.4.2 Convergence — 10
 - 1.4.3 Completeness — 12
 - 1.4.4 Balls and Boundedness — 13
 - 1.4.5 Interior Points, Open Sets — 15
 - 1.4.6 Limit Points, Closed Sets — 16
 - 1.4.7 Dense Sets and Separable Spaces — 18
 - 1.4.8 Compactness — 19
 - 1.4.9 Continuity — 22

2 Basic Set Classes — 25

- 2.1 Semirings, Semi-algebras — 25
- 2.2 Rings, Algebras — 26
- 2.3 σ -Rings, σ -Algebras — 29
- 2.4 Monotone Classes — 31
- 2.5 Generated Set Classes — 32
 - 2.5.1 Intersection Lemma — 33
 - 2.5.2 Generated Set Classes — 34
 - 2.5.3 Borel Sets — 39
- 2.6 Problems — 40

3 Measures — 43

- 3.1 Set Functions — 43
- 3.2 Measure — 45
 - 3.2.1 Definition and Examples — 45
 - 3.2.2 Properties of Measure — 46
 - 3.2.3 Continuity of Measure — 49
 - 3.2.4 More Examples of Measures — 51
- 3.3 Problems — 62

4	Extension of Measures — 65
4.1	Extension of a Set Function — 65
4.2	Extension From a Semiring — 65
4.3	Outer Measure — 68
4.3.1	Definition and Examples — 68
4.3.2	Construction of Outer Measures — 69
4.4	μ^* -Measurable Sets, Carathéodory's Theorem — 72
4.4.1	μ^* -Measurable Sets — 72
4.4.2	Carathéodory's Theorem — 74
4.5	Completeness — 77
4.5.1	Null Sets, Completeness — 77
4.5.2	Addendum to Carathéodory's Theorem — 78
4.5.3	Completion — 79
4.6	Measure Extension From a Ring — 81
4.6.1	Carathéodory's Extension Theorem — 82
4.6.2	Approximation — 90
4.7	Lebesgue–Stieltjes Measures — 92
4.7.1	The Construct — 92
4.7.2	Relationships Between Various Extensions of Length — 95
4.7.3	Existence of a Non-Lebesgue Measurable Set in $\mathbb{R}$ — 96
4.7.4	Multidimensional Lebesgue Measure — 98
4.8	Problems — 100
5	Measurable Functions — 105
5.1	Measurable Space and Measure Space — 105
5.2	Definition and Examples — 105
5.3	A Characterization of Σ - Σ' -Measurability — 107
5.4	Borel and Lebesgue Measurable Functions — 108
5.5	Properties of Measurable Functions — 110
5.5.1	Compositions of Measurable Functions — 110
5.5.2	Combinations of Measurable Functions — 111
5.5.3	Sequences of Measurable Functions — 112
5.6	Simple Functions — 114
5.7	Luzin's Theorem — 120
5.8	Notion of Almost Everywhere — 124
5.8.1	Definition and Examples — 124
5.8.2	Equivalence of Functions — 125
5.8.3	A. E. Characterization of Measurability — 126
5.9	Convergence Almost Everywhere — 128
5.9.1	Definition, Examples, and Properties — 128
5.9.2	Uniqueness A. E. of Limit A. E. — 132
5.9.3	Measurability of Limit A. E. — 133

5.9.4	Egorov's Theorem —	134
5.10	Convergence in Measure —	137
5.10.1	Definition, Examples, and Properties —	137
5.10.2	Uniqueness A. E. of Limit in Measure —	140
5.10.3	Lebesgue and Riesz Theorems —	141
5.11	Probabilistic Terminology —	145
5.12	Problems —	145
6	Abstract Lebesgue Integral —	151
6.1	Definitions and Examples —	151
6.2	Properties of Lebesgue Integral —	160
6.3	Countable Additivity —	165
6.4	Further Properties —	167
6.5	Monotone Convergence Theorem —	173
6.6	Linearity of Lebesgue Integral —	177
6.7	Basic Limit Theorems —	180
6.7.1	Levi's Theorem —	180
6.7.2	Fatou's Lemma —	182
6.7.3	Lebesgue's Dominated Convergence Theorem —	184
6.8	Change of Variable Theorem —	186
6.9	Approximation by Continuous Functions —	188
6.10	Comparison of Riemann and Lebesgue Integrals —	192
6.10.1	Riemann Integral Basics —	192
6.10.2	Characterization of Riemann Integrability —	194
6.10.3	Improper Integrals and Lebesgue Integral —	200
6.11	Problems —	204
7	L_p Spaces —	211
7.1	Hölder's and Minkowski's Inequalities —	211
7.1.1	Conjugate Indices —	211
7.1.2	Two Important Inequalities —	212
7.1.3	Essential Supremum —	213
7.1.4	p -Norms —	215
7.1.5	Hölder's Inequality —	217
7.1.6	Minkowski's Inequality —	219
7.2	Convergence in p -Norm —	221
7.2.1	Definitions and Examples —	221
7.2.2	Convergence in ∞ -Norm —	224
7.2.3	Uniqueness A. E. of Limit in p -Norm —	225
7.2.4	Relationships Between Different Types of Convergence —	225
7.3	Fundamentals of Normed Vector Spaces —	226
7.3.1	Definitions and Examples —	226

7.3.2	Incompleteness of $R[a, b]$ —	230
7.4	L_p Spaces —	233
7.4.1	Definition —	233
7.4.2	Important Particular Cases —	235
7.4.3	Hölder's and Minkowski's Inequalities in L_p Spaces —	236
7.4.4	Completeness of L_p Spaces —	236
7.4.5	Approximation in L_p Spaces —	241
7.5	Problems —	245

8 Differentiation and Integration — 249

8.1	Derivative Numbers —	249
8.2	Vitali Covers and Vitali Covering Lemma —	251
8.3	Monotone Functions —	257
8.3.1	Definition and Certain Properties —	257
8.3.2	Total Jump and Jump Function —	258
8.3.3	Derivative Numbers of Increasing Functions —	261
8.3.4	Differentiability of Monotone Functions —	269
8.3.5	Total Change Estimate —	270
8.3.6	The Cantor Function —	272
8.4	Functions of Bounded Variation —	274
8.4.1	Definition, Examples, Properties —	274
8.4.2	Additivity of Total Variation, Total Variation Function —	278
8.4.3	Jordan Decomposition Theorem —	279
8.4.4	Derivative of a Function of Bounded Variation —	280
8.5	Absolutely Continuous Functions —	281
8.5.1	Definition, Examples, Properties —	281
8.5.2	Characterization of Absolute Continuity —	283
8.5.3	Derivative of an Absolutely Continuous Function —	286
8.5.4	Singular Functions —	287
8.5.5	Antiderivative and Total Change Formula —	289
8.5.6	Lebesgue Decomposition Theorem —	292
8.6	Problems —	294

9 Signed Measures — 297

9.1	Definition and Examples —	297
9.2	Elementary Properties —	299
9.3	Hahn Decomposition —	300
9.3.1	Positive, Negative, and Null Set —	300
9.3.2	Negative Subset Lemma —	301
9.3.3	Hahn Decomposition Theorem —	303
9.4	Jordan Decomposition Theorem —	306
9.4.1	Mutual Singularity of Measures —	306

9.4.2	Jordan Decomposition Theorem —	307
9.4.3	Total Variation of a Signed Measure —	309
9.5	Radon–Nikodym Theorem —	309
9.5.1	Absolute Continuity of Signed Measure —	309
9.5.2	Radon–Nikodym Theorem —	312
9.5.3	Radon–Nikodym Derivative —	317
9.6	Lebesgue Decomposition Theorem —	317
9.7	Problems —	318

A The Axiom of Choice and Equivalents — 321

A.1	The Axiom of Choice —	321
A.1.1	The Axiom of Choice —	321
A.1.2	Controversy —	321
A.1.3	Timeline —	322
A.2	Ordered Sets —	322
A.3	Equivalents —	326

Bibliography — 331

Index — 333
