

Table of Contents

1	Cell Culture Models: Reliable Tools in Pharmacotoxicology? <i>N. E. Fusenig</i>	1
2	Differentiation of Human Monocytes In Vitro: A Model of Macrophage Ontogeny <i>R. Andreesen and M. Kreutz</i>	9
3	Embryonic Stem Cell Derived Cardiogenesis and Myogenesis <i>A. M. Wobus, J. Rohwedel, V. Maltsev, and J. Hescheler</i>	29
4	Embryonic Stem Cells as a Tool for Analyzing Mammalian Hematopoietic Development and Disease <i>E. F. Wagner</i>	59
5	Tight Junctions and the Blood-Brain Barrier <i>L. L. Rubin, K. Herrenknecht, and J. M. Staddon</i>	69
6	Carcinogenesis Studies of Human Cells: Reliable In Vitro Models <i>N. E. Fusenig and P. Boukamp</i>	79
7	The Use of Animal Tumor Models to Study the Role of the Tumor Microenvironment and Paracrine and Autocrine Growth Mechanisms in Metastasis to Specific Sites <i>G. L. Nicolson</i>	103

8	Cellular Models for Angiogenesis Research <i>M. A. Rupnick and B. R. Zetter</i>	125
9	Effects of Progesterone and Antiprogestins on Gonadotropin Secretion in the Model of Cultured Rat Pituitary Cells <i>O. Ortmann, S. S. Stojilkovic, K. J. Catt, K.-D. Schulz, and G. Emons</i>	165
10	Effect of Progesterone on Proteins Vectorially Secreted by Glandular Epithelial Cells of Guinea Pig Endometrium: Modulation by Homologous Stroma <i>A. Mahfoudi, M. Nicollier, and G. L. Adessi</i>	191
11	Steroids as Negative Regulators of Granulosa Cell Proliferation and Differentiation <i>J. J. Peluso</i>	215
12	Applications of Expression Vectors Containing Bicistronic Transcription Units in Mammalian Cells <i>W. Dirks, C. Mielke, S. Karreman, B. Haase, M. Wirth, W. Lindenmaier, and H. Hauser</i>	239
13	Regulation of Progesterone Receptor Activity in Cell Culture Systems and Cell-Free Transcription <i>L. Vaßen, M. Klotzbücher, V. Ulber, G. U. Ryffel, and L. Klein-Hitpass</i>	267
	Subject Index	299
