

Table of Contents

1	Dissecting the Genetic Component of Complex Diseases in Humans <i>A. Reis</i>	1
2	Bioinformatics of Membrane Proteins <i>G. von Heijne</i>	17
3	SNAPping Up Functionally Related Genes Based on Context Information: A Colinearity-Free Approach <i>G. Kolesov, H.-W. Mewes, D. Frishman</i>	29
4	Promoter Analysis <i>T. Werner</i>	65
5	Cluster Analysis and Its Applications to Gene Expression Data <i>R. Sharan, R. Elkon, R. Shamir</i>	83
6	Statistical Methods for Analyzing Gene Expression Data for Cancer Research <i>N. Friedman, N. Kaminski</i>	109
7	Comparing Secondary Structure 'Stick' Models of Proteins Using Graph Matching with Double Dynamic Programming <i>W.R. Taylor</i>	133
8	Computational Structural Proteomics <i>L. Brive, R. Abagyan</i>	149

9	Proteomics in Biological Research: The Challenge to Make Proteins Speak <i>M. Gentzel, T. Köcher, M. Wilm</i>	167
10	Construction and Prediction of Protein–Protein Interaction Maps <i>V. Schächter</i>	191
11	Bioinformatics, Cellular Flows, and Calculation <i>H.V. Westerhoff, W.M. Getz, H.W. van Verseveld, J.-H.S. Hofmeyr, J.L. Snoep</i>	221
12	Graph-Based Analysis of Metabolic Networks <i>J. van Helden, L. Wernisch, D. Gilbert, S.J. Wodak</i>	245
13	Orphan Protein Function and Its Relation to Glycosylation <i>R. Gupta, L.J. Jensen, S. Brunak</i>	275
	Subject Index	295
	Previous Volumes Published in This Series	297
