|----------|------------------------------------------------|----|
| <b>1</b> | <b>Introduction and Motivation</b> .....       | 1  |
|          | References .....                               | 4  |
| <b>2</b> | <b>Quark Flavor Interaction</b> .....          | 5  |
| 2.1      | Chiral Symmetry .....                          | 5  |
| 2.2      | Dynamical Breaking of Chiral Symmetry .....    | 6  |
| 2.3      | The Nambu–Jona–Lasinio Model .....             | 8  |
| 2.4      | Gradient Expansion .....                       | 15 |
| 2.5      | PCAC .....                                     | 19 |
| 2.6      | Relation to Instanton Effects .....            | 21 |
| 2.7      | Final Note on Chiral Quark Models .....        | 24 |
|          | References .....                               | 24 |
| <b>3</b> | <b>Self-consistent Soliton</b> .....           | 27 |
| 3.1      | Static Energy Functional .....                 | 27 |
| 3.2      | Method .....                                   | 31 |
| 3.3      | Soliton Solutions in NJL-Type Models .....     | 35 |
| 3.3.1    | Pseudoscalar Fields .....                      | 35 |
| 3.3.2    | Vector and Axial-Vector Fields .....           | 38 |
| 3.3.3    | Remark on the $\omega$ Field .....             | 39 |
| 3.3.4    | Comments on Scalar Fields .....                | 40 |
|          | References .....                               | 41 |
| <b>4</b> | <b>The Skyrme Model</b> .....                  | 43 |
| 4.1      | Large- $N_C$ Considerations .....              | 43 |
| 4.2      | Baryons in Large- $N_C$ QCD .....              | 47 |
| 4.3      | A Simple Soliton .....                         | 51 |
| 4.4      | Skyrme Model Soliton .....                     | 53 |
| 4.5      | Equations of Motion and Wess–Zumino Term ..... | 55 |
| 4.6      | Topological Structures .....                   | 58 |

|          |                                                                |            |
|----------|----------------------------------------------------------------|------------|
| 4.7      | Vector Interactions .....                                      | 60         |
|          | References .....                                               | 64         |
| <b>5</b> | <b>Soliton Quantization in Flavor <math>SU(2)</math></b> ..... | <b>65</b>  |
| 5.1      | Collective Coordinates .....                                   | 65         |
| 5.2      | Quantization of the $SU(N)$ Rigid Top .....                    | 67         |
| 5.3      | Nucleon and $\Delta$ States .....                              | 71         |
| 5.4      | Nucleon Static Properties .....                                | 73         |
| 5.5      | Quantization in Vector Meson Models .....                      | 79         |
| 5.6      | Quantization in Chiral Quark Models .....                      | 81         |
|          | References .....                                               | 83         |
| <b>6</b> | <b>Soliton Quantization in Flavor <math>SU(3)</math></b> ..... | <b>85</b>  |
| 6.1      | Baryon States in the Non-relativistic Quark Model .....        | 85         |
| 6.2      | Quantization of the Soliton in the Flavor Symmetric Case ....  | 86         |
| 6.3      | Flavor Symmetry Breaking .....                                 | 92         |
| 6.4      | Diagonalization with Flavor Symmetry Breaking .....            | 96         |
| 6.5      | Beyond the Classical Hedgehog Solution .....                   | 98         |
| 6.6      | Bound State Approach .....                                     | 100        |
| 6.7      | Baryons with a Heavy Valence Quark .....                       | 105        |
| 6.8      | Brief Summary on Soliton Quantization .....                    | 110        |
|          | References .....                                               | 111        |
