Preface — VII

Acknowledgment — IX

Acronyms — XV

Part I: Introduction

- 1 Preliminaries and notations — 3**
 - 1.1 Polynomial sequences — 3
 - 1.2 About polynomial sequences represented by lower triangular, nonsingular infinite matrices — 4
 - 1.3 The plan of the book — 5
- 2 Particular matrices and their connections with formal power series — 7**
 - 2.1 Binomial-type matrix — 7
 - 2.2 Appell-type matrix — 9
 - 2.3 Sheffer-type matrix — 11
 - 2.4 Lidstone-type matrix — 15
 - 2.5 Production matrix — 18
 - 2.6 Summary — 19

Part II: Polynomial sequences of binomial type

- 3 Binomial polynomial sequences — 23**
 - 3.1 Introduction — 23
 - 3.2 Definition and characterizations — 23
 - 3.3 Recurrence relations — 27
 - 3.4 Determinantal forms — 31
 - 3.5 Relationship with δ -functionals — 34
 - 3.6 Relationship with δ -operators — 35
 - 3.7 Connection constants — 38
 - 3.8 Summary — 40
- 4 Applications to linear interpolation and operators approximation theory — 41**
 - 4.1 Linear interpolation — 41
 - 4.2 Approximation operators of binomial type — 42

4.3 Summary — 45

5 Examples — 47

- 5.1 The sequence $\{x^n\}_{n \in \mathbb{N}}$ — 47
- 5.2 Lower factorial and exponential polynomials — 48
- 5.3 Abel polynomial sequences — 55
- 5.4 Binomial Laguerre polynomials — 62
- 5.5 Central factorial polynomials — 67

Part III: Appell polynomial sequences

6 Appell polynomial sequences — 77

- 6.1 Introduction — 77
- 6.2 Definition and characterizations — 78
- 6.3 Recurrence relations — 81
- 6.4 Determinantal forms — 85
- 6.5 General properties — 88
- 6.6 Localization of zeros — 93
- 6.7 Operational matrices — 95
- 6.8 Relationship with linear functionals — 96
- 6.9 Generalization of Appell polynomials — 98
- 6.10 Summary — 99

7 Application to linear interpolation and approximation theory — 101

- 7.1 Appell interpolation — 101
- 7.2 Operators approximation theory — 103

8 Examples — 107

- 8.1 Bernoulli polynomials — 107
- 8.2 Euler polynomials — 123
- 8.3 Hermite polynomials — 134
- 8.4 Appell–Laguerre polynomials — 141

Part IV: Sheffer polynomial sequences

9 Sheffer polynomial sequence — 149

- 9.1 Introduction — 149
- 9.2 Definition and first characterizations — 149
- 9.3 Recurrence relations and determinantal forms — 153
- 9.4 Differential equations — 158
- 9.5 General properties — 162

- 9.6 Relationship with δ -operators and functionals — 163
- 9.7 Summary — 165
- 10 Applications to linear interpolation and operators approximation theory — 167**
 - 10.1 Linear interpolation — 167
 - 10.2 Operators approximation theory — 171
- 11 Examples — 175**
 - 11.1 The generalized Bernoulli polynomials of the second kind — 175
 - 11.2 Generalized Laguerre polynomials — 184
 - 11.3 Generalized Boole polynomials — 190
 - 11.4 Poisson–Charlier polynomials — 195

Part V: Lidstone polynomial sequences

- 12 Lidstone-type polynomial sequences — 203**
 - 12.1 Introduction — 203
 - 12.2 Odd Lidstone-type polynomial sequences — 203
 - 12.3 Recurrence relation, determinantal form — 207
 - 12.4 Even Lidstone-type polynomial sequences — 210
 - 12.5 Recurrence relation, determinantal form — 213
 - 12.6 Summary — 215
- 13 Application to linear interpolation and operators approximation theory — 217**
 - 13.1 Odd Lidstone-type linear interpolation problem — 217
 - 13.2 Odd Lidstone-type generalized Szasz operators — 218
 - 13.3 Even Lidstone-type interpolation problem — 219
 - 13.4 Even Lidstone-type generalized Szasz operators — 220
 - 13.5 Summary — 221
- 14 Examples — 223**
 - 14.1 First type Lidstone polynomials — 223
 - 14.2 Odd Lidstone–Euler polynomials — 229
 - 14.3 Second type or complementary Lidstone polynomials — 233
 - 14.4 Even Lidstone–Euler polynomials — 238

Bibliography — 245

Index — 255
