Preface — V

1 Vector, metric, normed and Banach spaces — 1

- 1.1 Vector spaces — 1
- 1.2 Metric spaces — 24
- 1.3 Useful inequalities — 29
- 1.4 Complete spaces — 32
- 1.5 Normed spaces — 39
- 1.6 Banach spaces — 53
- 1.7 Inner product spaces — 54
- 1.8 Hilbert spaces — 62
- 1.9 Separable spaces — 69
- 1.10 Advanced practical problems — 70

2 Lebesgue integration — 73

- 2.1 Lebesgue outer measure. Measurable sets — 73
- 2.2 The Lebesgue measure. The Borel–Cantelli lemma — 95
- 2.3 Nonmeasurable sets — 99
- 2.4 The Cantor set. The Cantor–Lebesgue function — 102
- 2.5 Lebesgue measurable functions — 107
- 2.6 The Riemann integral — 124
- 2.7 Lebesgue integration — 125
- 2.7.1 The Lebesgue integral of a bounded measurable function over a set of finite measure — 125
- 2.7.2 The Lebesgue integral of a measurable nonnegative function — 135
- 2.7.3 The general Lebesgue integral — 143
- 2.8 Continuity and differentiability of monotone functions. Lebesgue’s theorem — 158
- 2.9 General measure spaces — 168
- 2.10 General measurable functions — 169
- 2.11 Integration over general measure spaces — 171
- 2.12 Advanced practical problems — 176

3 The L^p spaces — 179

- 3.1 Definition — 179
- 3.2 The inequalities of Hölder and Minkowski — 180
- 3.3 Some properties — 182
- 3.4 The Riesz–Fischer theorem — 183
- 3.5 Separability — 189

3.6	Duality — 190
3.7	General L^p spaces — 204
3.8	Advanced practical problems — 207
4	Linear operators — 209
4.1	Definition — 209
4.2	Linear operators in normed vector spaces — 211
4.3	Inverse operators — 229
4.4	Advanced practical problems — 233
5	Linear functionals — 235
5.1	The Hahn–Banach extension theorem — 235
5.2	The general form of the linear functionals on E_n in the case $F = \mathbb{R}$ — 241
5.3	The general form of the linear functionals on Hilbert spaces — 242
5.4	Weak convergence of sequences of functionals — 244
5.5	Advanced practical problems — 244
6	Relatively compact sets in metric and normed spaces. Compact operators — 247
6.1	Definitions. General theorems — 247
6.2	Criteria for compactness of sets in metric spaces — 250
6.3	A Criteria for relative compactness in the space $C([a, b])$ — 254
6.4	A Criteria for compactness in the space $L^p([a, b])$, $p > 1$ — 257
6.5	Compact operators — 260
6.6	Advanced practical problems — 263
7	Self-adjoint operators in Hilbert spaces — 265
7.1	Adjoint operators. Self-adjoint operators — 265
7.2	Unitary operators — 266
7.3	Projection operators — 267
8	The method of the small parameter — 273
8.1	Abstract functions of a real variable — 273
8.2	Power series — 280
8.3	Analytic abstract functions and Taylor's series — 282
8.4	The method of the smaller parameter — 286
8.5	An application to integral equations — 289
9	The parameter continuation method — 299
9.1	Statement of the basic result — 299
9.2	An application to a boundary value problem for a class of second order ordinary differential equations — 300

10	Fixed-point theorems and applications — 309
10.1	The Banach fixed-point theorem — 309
10.2	The Brinciari fixed-point theorem — 311
10.3	The Brouwer fixed-point theorem — 318
10.4	The Schauder fixed-point theorem — 320
10.5	Non-compact Type Krasnosel'skii fixed-point theorems — 322
10.6	Fixed-point results for the sum $\mathbb{T} + \mathbb{S}$ — 325
10.7	Fixed-point results to one parameter operator equations and eigenvalues problems — 338
10.8	Application to perturbed Volterra integral equation — 339
10.9	Application to transport equations — 344
10.10	Application to a class of difference equations — 348
10.11	Application to a Darboux problem — 360
A	Sets and mappings — 375
A.1	Union and intersection of sets — 375
A.2	Mappings between sets — 376
A.3	Countable and uncountable sets — 379
A.4	Continuous real-valued functions on a real variable — 383
B	Functions of bounded variation — 385
	Bibliography — 389
	Index — 391
