## CHAPTER 1

### Transplacental Transfer of Lead and Cadmium

|                                                                                              |    |
|----------------------------------------------------------------------------------------------|----|
| R.A. GOYER. With 2 Figures .....                                                             | 1  |
| A. Introduction .....                                                                        | 1  |
| I. Comparison of Human<br>and Rodent Fetal-Maternal Blood Barriers .....                     | 2  |
| II. Methods for Sampling the Human Placenta .....                                            | 3  |
| B. Placental Transfer of Lead .....                                                          | 3  |
| I. Mechanism of Placental Transfer of Lead .....                                             | 3  |
| II. Maternal Blood Lead Levels During Pregnancy .....                                        | 5  |
| III. Effect of Maternal Lead on Birth Outcomes .....                                         | 6  |
| IV. Effect of Lead on Neurobehavioral<br>and Cognitive Development In Utero .....            | 6  |
| V. Mechanisms for the Neurotoxicity of Lead .....                                            | 7  |
| C. Placental Transfer of Cadmium .....                                                       | 8  |
| I. Cadmium Levels in Human Placenta .....                                                    | 9  |
| II. Cadmium Effects on Placenta and Fetus .....                                              | 10 |
| III. Interactions in Placenta Between Cadmium, Zinc<br>and Copper, and Metallothionein ..... | 11 |
| D. Summary .....                                                                             | 13 |
| References .....                                                                             | 13 |

## CHAPTER 2

### Porphyrin Metabolism as Indicator of Metal Exposure and Toxicity

|                                                                              |    |

| D. Metal- and Metalloid-Induced Porphyrinopathies and Porphyrinurias .....                      | 27 |
| I. Lead .....                                                                                   | 27 |
| 1. Erythrocyte ALA Dehydratase .....                                                            | 28 |
| 2. Erythrocyte Zinc-Protoporphyrin .....                                                        | 30 |
| 3. Urinary Coproporphyrin .....                                                                 | 33 |
| II. Mercury .....                                                                               | 36 |
| 1. Mercury-Directed Alteration of Renal Coproporphyrinogen Metabolism .....                     | 36 |
| 2. Mercury-Facilitated Porphyrinogen Oxidation .....                                            | 38 |
| III. Arsenic .....                                                                              | 39 |
| IV. Other Metals .....                                                                          | 41 |
| 1. Cadmium .....                                                                                | 41 |
| 2. Platinum .....                                                                               | 41 |
| 3. Aluminum .....                                                                               | 42 |
| 4. Metal Interactions .....                                                                     | 43 |
| E. Perspectives on the Use of Porphyrins as Biomarkers of Metal Exposure in Human Studies ..... | 43 |
| References .....                                                                                | 46 |

### CHAPTER 3

#### Membrane Transporters as Sites of Action and Routes of Entry for Toxic Metals

|                                                                                         |    |
|-----------------------------------------------------------------------------------------|----|
| D.C. DAWSON and N. BALLATORI. With 4 Figures .....                                      | 53 |
| A. Introduction: Metals and Membranes .....                                             | 53 |
| B. Chemical Properties of Metals in Solutions .....                                     | 54 |
| C. Model Systems .....                                                                  | 59 |
| D. Mercury Inhibition of NaCl Cotransport: An Example Problem with a Model System ..... | 62 |
| E. Metal Entry into Cells .....                                                         | 63 |
| F. Permeation in a Lipid-Soluble Form .....                                             | 63 |
| G. Permeation as a Cation .....                                                         | 64 |
| H. Permeation as an Anion .....                                                         | 67 |
| I. Transport of Organic Complexes .....                                                 | 69 |
| J. Physiological Significance of Metal Permeation Pathways .....                        | 71 |
| References .....                                                                        | 72 |

## CHAPTER 4

**Immunotoxicology of Metals**

|                                                                             |    |
|-----------------------------------------------------------------------------|----|
| L. PELLETIER and P. DRUET .....                                             | 77 |
| A. Introduction .....                                                       | 77 |
| B. Basis of the Immune Response .....                                       | 78 |
| C. Hypersensitivity Reactions .....                                         | 80 |
| D. Experimental Models of Metal-Induced Autoimmunity .....                  | 81 |
| I. Description of the Models .....                                          | 81 |
| 1. HgCl <sub>2</sub> -Induced Autoimmunity in Rats .....                    | 81 |
| 2. HgCl <sub>2</sub> -Induced Autoimmunity in Other Species .....           | 83 |
| 3. Gold-Induced Autoimmunity .....                                          | 83 |
| II. Mechanisms of Induction .....                                           | 83 |
| III. Autoregulation .....                                                   | 86 |
| E. Nonantigen-Specific Immunosuppression Induced by HgCl <sub>2</sub> ..... | 86 |
| F. Conclusions .....                                                        | 87 |
| References .....                                                            | 87 |

## CHAPTER 5

**Effects of Metals on Gene Expression**

|                                                                              |     |
|------------------------------------------------------------------------------|-----|
| J. KOROPATNICK and M.E.I. LEIBBRANDT .....                                   | 93  |
| A. Introduction .....                                                        | 93  |
| B. Molecular Control of Gene Expression .....                                | 95  |
| C. Eukaryotic Strategies of Signal Transfer .....                            | 95  |
| I. Multiple Factor Signal Transduction Systems .....                         | 96  |
| II. Single Factor Signal Transduction Systems .....                          | 96  |
| D. Transduction of Metal Signals in Eukaryotes .....                         | 98  |
| I. Entry, Binding, and Storage of Essential Metals .....                     | 98  |
| 1. Iron .....                                                                | 98  |
| 2. Copper .....                                                              | 100 |
| II. Essential Metals as Regulators of Metabolism .....                       | 102 |
| 1. Iron .....                                                                | 102 |
| 2. Copper .....                                                              | 103 |
| III. Metallothionein and Other Genes as Models<br>for Metal Regulation ..... | 103 |
| 1. Metal Regulation in Yeast .....                                           | 104 |
| 2. Metal Regulation in Mammals .....                                         | 104 |
| IV. Metal Bioavailability and Sequestration .....                            | 107 |
| E. Other Metal-Regulated Genes .....                                         | 109 |
| I. Plastocyanin and <i>cyt c6</i> .....                                      | 109 |
| II. Superoxide Dismutase .....                                               | 109 |
| III. Heat Shock Proteins .....                                               | 111 |
| IV. Acute Phase Proteins, Heme Oxygenase, and Oncogenes ..                   | 111 |

|                                                       |     |
|-------------------------------------------------------|-----|
| F. Metal-Induced Changes in Chromatin Structure ..... | 112 |
| G. Summary .....                                      | 113 |
| References .....                                      | 113 |

## CHAPTER 6

### **Metallothionein and Its Interaction with Metals**

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| M.G. CHERIAN .....                                                         | 121 |
| A. Introduction .....                                                      | 121 |
| B. Metal Binding and Dynamic Aspects<br>of Metallothionein Structure ..... | 122 |
| C. Induction of Metallothionein and Excretion of Metals .....              | 123 |
| D. Detoxification of Metals .....                                          | 125 |
| E. Regulation of Zinc and Copper Metabolism .....                          | 127 |
| F. Lipid Peroxidation and Oxidative Stress .....                           | 130 |
| G. Summary .....                                                           | 131 |
| References .....                                                           | 132 |

## CHAPTER 7

### **Biochemical Mechanisms of Aluminum Toxicity**

|                                                             |     |
|-------------------------------------------------------------|-----|
| E.H. JEFFERY .....                                          | 139 |
| A. Introduction .....                                       | 139 |
| B. Aluminum Species in Biological Systems .....             | 141 |
| C. Bioavailability of Aluminum .....                        | 142 |
| I. Exposure .....                                           | 142 |
| II. Gastrointestinal Absorption .....                       | 143 |
| III. Transcellular Uptake .....                             | 144 |
| IV. Paracellular Uptake .....                               | 145 |
| V. Systemic Transport .....                                 | 146 |
| VI. Accumulation in Erythrocytes .....                      | 146 |
| VII. Cellular Uptake .....                                  | 147 |
| VIII. Aluminum Interactions with Desferrioxamine .....      | 147 |
| D. Aluminum-Related Anemia .....                            | 148 |
| E. Aluminum-Related Bone Disease .....                      | 149 |
| F. Aluminum Neurotoxicity .....                             | 151 |
| G. Aluminum and Second Messenger Systems .....              | 153 |
| I. Fluoroaluminate Stimulation of G-Protein Systems .....   | 153 |
| II. Fluoride Stimulation of Second Messenger Systems .....  | 154 |
| III. Aluminum Stimulation of Second Messenger Systems ..... | 155 |
| IV. GTP Interaction with Aluminum .....                     | 155 |
| References .....                                            | 156 |

## CHAPTER 8

**Mercury Toxicity**

|                                                      |     |
|------------------------------------------------------|-----|
| K. MIURA, A. NAGANUMA, S. HIMENO, and N. IMURA ..... | 163 |
| A. Introduction .....                                | 163 |
| B. Organic Mercury .....                             | 163 |
| I. Methylmercury .....                               | 164 |
| 1. Mechanism of Uptake and Excretion .....           | 164 |
| 2. Mechanism of Toxicity .....                       | 166 |
| C. Inorganic Mercury .....                           | 171 |
| I. Mercuric Mercury .....                            | 171 |
| 1. Tissue Accumulation and Excretion .....           | 171 |
| 2. Toxicity .....                                    | 172 |
| 3. Mechanism of Renal Toxicity .....                 | 173 |
| II. Elemental Mercury .....                          | 175 |
| 1. Exposure to Elemental Mercury .....               | 175 |
| 2. Metabolism .....                                  | 176 |
| 3. Biotransformation .....                           | 177 |
| 4. Toxicity .....                                    | 179 |
| 5. Mechanism of Toxicity .....                       | 179 |
| References .....                                     | 180 |

## CHAPTER 9

**Toxicology of Cadmium**

|                                                     |     |
|-----------------------------------------------------|-----|
| P.L. GOERING, M.P. WAALKES, and C.D. KLAASSEN ..... | 189 |
| A. Introduction .....                               | 189 |
| I. Production and Uses .....                        | 189 |
| II. Exposure to Cadmium .....                       | 190 |
| III. Metabolism .....                               | 190 |
| B. Molecular and Cellular Effects .....             | 191 |
| I. Calmodulin-Calcium-Cadmium Interactions .....    | 191 |
| II. Other Effects .....                             | 193 |
| C. Target Organ Toxicity .....                      | 194 |
| I. Acute Toxicities .....                           | 194 |
| II. Chronic Toxicities .....                        | 194 |
| 1. Lung .....                                       | 194 |
| 2. Kidney .....                                     | 195 |
| 3. Liver .....                                      | 195 |
| 4. Developmental Effects .....                      | 196 |
| 5. Reproductive Effects .....                       | 196 |
| 6. Bone .....                                       | 197 |
| 7. Immune Effects .....                             | 198 |

|                                                                    |     |
|--------------------------------------------------------------------|-----|
| D. Carcinogenesis .....                                            | 199 |
| I. Human Studies .....                                             | 199 |
| II. Animal Studies .....                                           | 200 |
| 1. Lung .....                                                      | 200 |
| 2. Prostate .....                                                  | 201 |
| 3. Testes .....                                                    | 201 |
| 4. Injection Site .....                                            | 201 |
| 5. Hematopoietic .....                                             | 202 |
| 6. Metal-Metal Interactions .....                                  | 202 |
| 7. Synergism and Antagonism .....                                  | 202 |
| E. Roles of Metallothionein and Glutathione in Cadmium Toxicity .. | 203 |
| I. Metallothionein .....                                           | 203 |
| II. Glutathione .....                                              | 204 |
| F. Conclusion .....                                                | 204 |
| References .....                                                   | 205 |

## CHAPTER 10

### **Chromium Toxicokinetics**

|                                                         |     |
|---------------------------------------------------------|-----|
| E.J. O'FLAHERTY .....                                   | 215 |
| A. Introduction .....                                   | 215 |
| B. Chromium Actions and Kinetics .....                  | 215 |
| I. Local and Systemic Toxicity .....                    | 215 |
| II. Essentiality of Cr(III) .....                       | 216 |
| III. Carcinogenicity of Cr(VI) .....                    | 217 |
| C. Key Features of Chromium Kinetics .....              | 218 |
| I. Solubility .....                                     | 218 |
| II. Membrane Permeability and Chromium Absorption ..... | 219 |
| 1. Gastrointestinal Absorption .....                    | 219 |
| 2. Pulmonary Absorption .....                           | 220 |
| III. Reduction of Cr(VI) to Cr(III) .....               | 221 |
| IV. General Chromium Disposition .....                  | 221 |
| V. Chromium in the Red Cell .....                       | 222 |
| VI. Chromium in Bone .....                              | 225 |
| VII. Chromium in Other Tissues .....                    | 225 |
| VIII. Excretion .....                                   | 222 |
| D. Uncertainties and Research Needs .....               | 223 |
| References .....                                        | 226 |

## CHAPTER 11

**Metals and Stress Proteins**

|                                                                     |     |
|---------------------------------------------------------------------|-----|
| P.L. GOERING and B.J. FISHER. With 1 Figure .....                   | 229 |
| A. Introduction .....                                               | 229 |
| B. Stress Proteins and Their Functions .....                        | 230 |
| C. Metals and Their Effects on Expression of Stress Proteins .....  | 233 |
| I. General .....                                                    | 233 |
| II. Arsenic .....                                                   | 235 |
| III. Cadmium .....                                                  | 239 |
| IV. Mercury .....                                                   | 240 |
| V. Copper .....                                                     | 240 |
| VI. Zinc .....                                                      | 241 |
| VII. Lead .....                                                     | 241 |
| VIII. Iron .....                                                    | 242 |
| IX. Gold .....                                                      | 242 |
| D. Tolerance Induction and Stress Proteins .....                    | 243 |
| E. Heme Oxygenase Is a Stress Protein .....                         | 245 |
| F. Is Metallothionein a Stress Protein? .....                       | 247 |
| I. Evolutionary Conservation .....                                  | 248 |
| II. Common Inducers .....                                           | 248 |
| III. Protective Roles and Cross-tolerance .....                     | 248 |
| IV. Gene Regulation .....                                           | 250 |
| V. Increased Expression in Neoplasms and Other Diseases ...         | 250 |
| VI. Adjuncts to Chemotherapy .....                                  | 251 |
| G. Stress Proteins as Biomarkers of Metal Exposure and Toxicity ... | 251 |
| I. Rationale and Criteria .....                                     | 252 |
| II. Exposure and Toxicity .....                                     | 252 |
| III. Toxicity Screening Assays .....                                | 254 |
| IV. Environmental Monitoring .....                                  | 256 |
| V. Human Applications .....                                         | 257 |
| References .....                                                    | 257 |

## CHAPTER 12

**Metals and Anticancer Drug Resistance**

|                                                                   |     |
|-------------------------------------------------------------------|-----|
| J.S. LAZO. With 1 Figure .....                                    | 267 |
| A. Introduction .....                                             | 267 |
| B. Metal-Binding and Metal-Based Anticancer Agents .....          | 267 |
| I. Bleomycin .....                                                | 268 |
| II. Doxorubicin .....                                             | 268 |
| III. Cisplatin and Carboplatin .....                              | 268 |
| C. Metal-Induced Anticancer Drug Resistance in Cell Culture ..... | 269 |
| I. Cadmium .....                                                  | 269 |

|                                                                            |     |
|----------------------------------------------------------------------------|-----|
| II. Zinc .....                                                             | 270 |
| D. Metallothionein and Anticancer Drug Resistance .....                    | 270 |
| I. In Vitro Metallothionein-Drug Interactions .....                        | 270 |
| II. Metallothionein in Drug-Resistant Cells .....                          | 271 |
| III. Nonmetal Induction of Metallothionein .....                           | 272 |
| IV. Metallothionein Gene Transfer .....                                    | 273 |
| V. Human Tumor Expression of Metallothionein and<br>Drug Sensitivity ..... | 274 |
| E. Metal-Mediated Changes in Drug Sensitivity In Vivo .....                | 274 |
| I. Zinc .....                                                              | 274 |
| II. Bismuth .....                                                          | 275 |
| F. Summary .....                                                           | 276 |
| References .....                                                           | 276 |

## CHAPTER 13

### **Chemistry of Chelation: Chelating Agent Antagonists for Toxic Metals**

|                                                                                                       |     |
|-------------------------------------------------------------------------------------------------------|-----|
| M.M. JONES. With 9 Figures .....                                                                      | 279 |
| A. Chelation: Its Basic Chemistry and Advantages<br>as a Metal Complexation Process .....             | 279 |
| B. Chemistry of Chelation in Biological Systems .....                                                 | 280 |
| C. Toxic Metal Excretion and Its Acceleration .....                                                   | 286 |
| I. Toxic Metal Half-Lives, Organ Distribution,<br>and Normal Rates of Excretion .....                 | 286 |
| II. Acceleration of Rates of Excretion of Toxic Metal Ions<br>Subsequent to Chelation .....           | 287 |
| 1. Lead Intoxication .....                                                                            | 287 |
| D. Alteration of Metal Reactivity, Toxicity, and Distribution<br>by Chelation .....                   | 289 |
| E. Stability Constants of Clinical Chelating Agents<br>with Toxic Metal Ions .....                    | 289 |
| I. Conditional or Effective Stability Constants .....                                                 | 290 |
| F. Development of Chelating Agents for Clinical Use .....                                             | 290 |
| I. BAL and Its Derivatives .....                                                                      | 291 |
| II. EDTA and Its Analogs .....                                                                        | 292 |
| III. D-Penicillamine<br>and Triethylenetetramine Dihydrochloride .....                                | 292 |
| IV. Deferoxamine and Hydroxypyrid inones .....                                                        | 292 |
| V. Sodium Diethyldithiocarbamate .....                                                                | 293 |
| G. Toxicity and Adverse Effects<br>of Clinically Used Chelating Agents .....                          | 293 |
| H. Current Clinical Treatments for Common Metal Intoxications<br>and Their Underlying Chemistry ..... | 293 |
| I. Lead .....                                                                                         | 293 |

CHAPTER 15

**Zinc Fingers and Metallothionein in Gene Expression**

|                                                                          |     |
|--------------------------------------------------------------------------|-----|
| J. ZENG and J.H.R. KÄGI. With 7 Figures .....                            | 333 |
| A. Introduction .....                                                    | 333 |
| B. Zinc Finger Proteins in Gene Expression .....                         | 333 |
| C. Modulation of Zinc Finger-Dependent Gene Expression<br>by pZn.....    | 336 |
| D. Effects of Thionein<br>on Zinc Finger-Dependent Gene Expression ..... | 338 |
| E. Implications and Speculation .....                                    | 343 |

|                  |     |
|------------------|-----|
| F. Summary ..... | 344 |
| References ..... | 345 |

## CHAPTER 16

### **Role of Active Oxygen Species in Metal-Induced DNA Damage**

|                                                          |     |
|----------------------------------------------------------|-----|
| S. KAWANISHI. With 1 Figure .....                        | 349 |
| A. Introduction .....                                    | 349 |
| B. Chromium .....                                        | 351 |
| C. Iron Complex .....                                    | 354 |
| D. Nickel .....                                          | 356 |
| E. Cobalt .....                                          | 358 |
| F. Copper .....                                          | 360 |
| G. Manganese .....                                       | 362 |
| H. Arsenic, Lead, and Cadmium .....                      | 363 |
| I. Role of Active Oxygen Species in Carcinogenesis ..... | 364 |
| References .....                                         | 365 |

## CHAPTER 17

### **Metal Mutagenesis**

|                                                   |     |
|---------------------------------------------------|-----|
| T.G. ROSSMAN .....                                | 373 |
| A. Introduction .....                             | 373 |
| B. Mutagenesis by Oxidative Reactions .....       | 375 |
| C. Confounding Factors in Metal Mutagenesis ..... | 376 |
| D. Mutagenic Effects of Human Carcinogens .....   | 377 |
| I. Arsenic .....                                  | 377 |
| II. Beryllium .....                               | 378 |
| III. Cadmium .....                                | 380 |
| IV. Chromium .....                                | 383 |
| V. Nickel .....                                   | 386 |
| E. Multagenic Effects of Other Metals .....       | 389 |
| I. Lead .....                                     | 389 |
| II. Mercury .....                                 | 391 |
| III. Other Metals .....                           | 392 |
| References .....                                  | 395 |

## CHAPTER 18

**Biological Mechanisms and Toxicological Consequences  
of the Methylation of Arsenic**

|                                                         |     |
|---------------------------------------------------------|-----|
| M. STYBLO, M. DELNOMDEDIEU, and D.J. THOMAS .....       | 407 |
| A. Introduction .....                                   | 407 |
| B. Biological Methylation of Arsenic .....              | 408 |
| I. Role of Methylation in Arsenic Metabolism .....      | 408 |
| II. Determinants of Interindividual Variation           |     |
| in Methylation Capacity .....                           | 409 |
| 1. Saturable Capacity for Arsenic Methylation .....     | 409 |
| 2. Influence of Nutritional Status .....                | 410 |
| 3. Genetically Determined Capacity                      |     |
| for Arsenic Methylation .....                           | 411 |
| III. Enzymology of Arsenic Methylation .....            | 412 |
| 1. Characteristics of Arsenic Methyltransferases .....  | 412 |
| 2. Role of GSH in Arsenic Reduction, Binding,           |     |
| and Methylation .....                                   | 412 |
| C. Comparative Metabolism, Kinetics, and Toxicity ..... | 413 |
| I. Methylation in Prokaryotes .....                     | 413 |
| II. Methylation in Eukaryotes .....                     | 414 |
| 1. Methylation in Nonhuman Species .....                | 414 |
| 2. Arsenic Methylation in Humans .....                  | 421 |
| D. Conclusions and Future Research Directions .....     | 425 |
| References .....                                        | 427 |

## CHAPTER 19

**Bacterial Plasmid-Mediated Resistances to Mercury, Cadmium,  
and Copper**

|                                                                                                                        |     |
|------------------------------------------------------------------------------------------------------------------------|-----|
| S. SILVER and M. WALDERHAUG. With 10 Figures .....                                                                     | 435 |
| A. Introduction and Overview: Generalities .....                                                                       | 435 |
| B. Mercury and Organomercurial Resistance .....                                                                        | 436 |
| I. Introduction .....                                                                                                  | 436 |
| II. Genetic Organization and Molecular Biology .....                                                                   | 436 |
| 1. Operon Structure in Gram-Negative Bacteria .....                                                                    | 437 |
| 2. The Special Case of <i>Thiobacillus</i> .....                                                                       | 441 |
| 3. Operon Structure in Gram-Positive Bacteria .....                                                                    | 441 |
| C. Cadmium and Zinc Resistance .....                                                                                   | 442 |
| I. CadA Cd <sup>2+</sup> ATPase in <i>Staphylococcus</i> and <i>Bacillus</i> .....                                     | 442 |
| II. Czc (Cd <sup>2+</sup> , Zn <sup>2+</sup> , and Co <sup>2+</sup> ) and Cnr (Co <sup>2+</sup> and Ni <sup>2+</sup> ) |     |
| Resistance Systems of <i>Alcaligenes</i> .....                                                                         | 447 |
| D. Relationship Between Human Menkes' and Wilson's ATPases                                                             |     |
| and Bacterial P-Type ATPases .....                                                                                     | 449 |

|                                                      |         |
|------------------------------------------------------|---------|
| E. Copper Transport and Resistance in Bacteria ..... | 452     |
| F. Summary and Conclusions .....                     | 455     |
| References .....                                     | 456     |
