Preface — V

Preface to the Second Edition — IX

Part I: Basic Structures

1 Vectors and Operators — 3

- 1.1 Hilbert Space — 3
- 1.2 Operators — 4
- 1.3 Positivity — 5
- 1.4 Trace and Duality — 6
- 1.5 Convexity — 7
- 1.6 Notes and References — 8

2 States, Observables, Statistics — 10

- 2.1 Structure of Statistical Theories — 10
 - 2.1.1 Classical Systems — 10
 - 2.1.2 Axioms of Statistical Description — 11
- 2.2 Quantum States — 13
- 2.3 Quantum Observables — 16
 - 2.3.1 Quantum Observables from the Axioms — 16
 - 2.3.2 Compatibility and Complementarity — 18
 - 2.3.3 The Uncertainty Relation — 20
 - 2.3.4 Convex Structure of Observables — 21
- 2.4 Statistical Discrimination Between Quantum States — 24
 - 2.4.1 Formulation of the Problem — 24
 - 2.4.2 Optimal Observables — 25
- 2.5 Notes and References — 31

3 Composite Systems and Entanglement — 33

- 3.1 Composite Systems — 33
 - 3.1.1 Tensor Products — 33
 - 3.1.2 Naimark's Dilation — 35
 - 3.1.3 Schmidt Decomposition and Purification — 37
- 3.2 Quantum Entanglement vs. "Local Realism" — 39
 - 3.2.1 Paradox of Einstein–Podolski–Rosen and Bell's Inequalities — 39
 - 3.2.2 Mermin–Peres Game — 43
- 3.3 Quantum Systems as Information Carriers — 45
 - 3.3.1 Transmission of Classical Information — 45

- 3.3.2 Entanglement and Local Operations — 46
- 3.3.3 Superdense Coding — 47
- 3.3.4 Quantum Teleportation — 48
- 3.4 Notes and References — 50

Part II: The Primary Coding Theorems

- 4 Classical Entropy and Information — 55**
 - 4.1 Entropy of a Random Variable and Data Compression — 55
 - 4.2 Conditional Entropy and the Shannon Information — 57
 - 4.3 The Shannon Capacity of the Classical Noisy Channel — 60
 - 4.4 The Channel Coding Theorem — 61
 - 4.5 Wiretap Channel — 67
 - 4.6 Gaussian Channel — 68
 - 4.7 Notes and References — 70
- 5 The Classical-Quantum Channel — 71**
 - 5.1 Codes and Achievable Rates — 71
 - 5.2 Formulation of the Coding Theorem — 72
 - 5.3 The Upper Bound — 75
 - 5.4 Proof of the Weak Converse — 79
 - 5.5 Typical Projectors — 83
 - 5.6 Proof of the Direct Coding Theorem — 88
 - 5.7 The Reliability Function for Pure-State Channel — 90
 - 5.8 Notes and References — 93

Part III: Channels and Entropies

- 6 Quantum Evolutions and Channels — 99**
 - 6.1 Quantum Evolutions — 99
 - 6.2 Completely Positive Maps — 102
 - 6.3 Definition of the Channel — 108
 - 6.4 Entanglement-Breaking and PPT Channels — 110
 - 6.5 Quantum Measurement Processes — 112
 - 6.6 Complementary Channels — 115
 - 6.7 Covariant Channels — 119
 - 6.8 Qubit Channels — 122
 - 6.9 Notes and References — 124
- 7 Quantum Entropy and Information Quantities — 126**

7.1	Quantum Relative Entropy — 126
7.2	Monotonicity of the Relative Entropy — 127
7.3	Strong Subadditivity of the Quantum Entropy — 132
7.4	Continuity Properties — 134
7.5	Information Correlation, Entanglement of Formation, and Conditional Entropy — 136
7.6	Entropy Exchange — 141
7.7	Quantum Mutual Information — 142
7.8	Notes and References — 144

Part IV: Basic Channel Capacities

8	The Classical Capacity of Quantum Channels — 149
8.1	The Coding Theorem — 149
8.2	The χ -Capacity — 151
8.3	The Additivity Problem — 154
8.3.1	The Effect of Entanglement in Encoding and Decoding — 154
8.3.2	A Hierarchy of Additivity Properties — 157
8.3.3	Some Entropy Inequalities — 160
8.3.4	Additivity for Complementary Channels — 163
8.3.5	Nonadditivity of Quantum Entropy Quantities — 164
8.4	Notes and References — 171
9	Entanglement-Assisted Classical Communication — 173
9.1	The Gain of Entanglement Assistance — 173
9.2	The Classical Capacities of Quantum Observables — 177
9.3	Proof of the Converse Coding Theorem — 181
9.4	Proof of the Direct Coding Theorem — 183
9.5	Notes and References — 186
10	Transmission of Quantum Information — 187
10.1	Quantum Error-Correcting Codes — 187
10.1.1	Error Correction by Repetition — 187
10.1.2	General Formulation — 189
10.1.3	Necessary and Sufficient Conditions for Error Correction — 190
10.1.4	Coherent Information and Perfect Error Correction — 191
10.2	Fidelities for Quantum Information — 195
10.2.1	Fidelities for Pure States — 195
10.2.2	Relations Between the Fidelity Measures — 197
10.2.3	Fidelity and the Bures Distance — 199
10.3	The Quantum Capacity — 202

10.3.1	Achievable Rates —	202
10.3.2	The Quantum Capacity and the Coherent Information —	206
10.3.3	Degradable Channels —	208
10.4	The Private Classical Capacity and the Quantum Capacity —	211
10.4.1	The Quantum Wiretap Channel —	211
10.4.2	Proof of the Private Capacity Theorem —	214
10.4.3	Large Deviations for Random Operators —	220
10.4.4	The Direct Coding Theorem for the Quantum Capacity —	222
10.5	Notes and References —	227

Part V: Infinite Systems

11	Channels with Constrained Inputs —	233
11.1	Convergence of Density Operators —	233
11.2	Quantum Entropy and Relative Entropy —	237
11.3	Constrained c-q Channel —	239
11.4	Classical-Quantum Channel with Continuous Alphabet —	241
11.5	Constrained Quantum Channel —	243
11.6	Entanglement-Assisted Capacity of Constrained Channels —	247
11.7	Entanglement-Breaking Channels in Infinite Dimensions —	248
11.8	Notes and References —	253
12	Gaussian Systems —	255
12.1	Preliminary Material —	255
12.1.1	Spectral Decomposition and Stone's Theorem —	255
12.1.2	Operators Associated with the Heisenberg Commutation Relation —	258
12.1.3	Classical Signal Plus Quantum Noise —	261
12.1.4	The Classical-Quantum Gaussian Channel —	263
12.2	Canonical Commutation Relations —	265
12.2.1	Weyl–Segal Canonical Commutation Relation —	265
12.2.2	The Symplectic Space —	267
12.2.3	Dynamics, Quadratic Operators, and Gauge Transformations —	269
12.3	Gaussian States —	273
12.3.1	Characteristic Function —	273
12.3.2	Definition and Properties of Gaussian States —	274
12.3.3	The Density Operator of Gaussian State —	279
12.3.4	Entropy of a Gaussian State —	281
12.3.5	Separability and Purification —	284
12.4	Gaussian Channels —	287
12.4.1	Open Bosonic Systems —	287

12.4.2	Gaussian Channels: Basic Properties —	291
12.4.3	Gaussian Observables —	292
12.4.4	Gaussian Entanglement-Breaking Channels —	294
12.5	The Capacities of Gaussian Channels —	297
12.5.1	Maximization of the Mutual Information —	297
12.5.2	Gauge Covariant Channels I —	299
12.5.3	Maximization of the Coherent Information —	301
12.5.4	The Classical Capacity —	302
12.6	The Case of Single Mode —	319
12.6.1	Classification of Gaussian Channels —	319
12.6.2	Entanglement-Breaking Channels —	324
12.6.3	Attenuation/Amplification/Classical Noise Channel —	325
12.6.4	Estimating the Quantum Capacity —	328
12.7	Notes and References —	333

Bibliography — 337

Index — 348
