

Contents

I	The Future of Gene Therapy <i>G.J. Nabel</i>	1
I Cardiovascular Diseases		
2	Angiogenesis Clinical Trials <i>S. Ylä-Herttuala</i>	19
3	AAV Vectors, the Future Workhorse of Human Gene Therapy <i>R.J. Samulski</i>	25
4	Nonviral Vectors for Cardiovascular Gene Delivery <i>J.A. Wolff, H. Herweijer</i>	41
5	Gene Therapy for Coronary Artery Disease: Preclinical and Initial Clinical Results with Intracoronary Administration of Ad5FGF-4 <i>M.W. Watkins, G.M. Rubanyi</i>	61
II Cancer		
6	Cancer Gene Therapy: Present Status and Future Directions <i>G.J. Nabel</i>	81

7	Oncolytic Virotherapy as a Novel Treatment Platform for Cancer <i>D. Kim</i>	89
8	Adenovirus Retargeting and Systemic Delivery <i>L.W. Seymour, K.D. Fisher, N.K. Green, S.J. Hale, M. Lyons, V. Mautner, S. Nicum, D. Onion, D. Oupicky, M. Stevenson, K. Ulbrich</i>	107

III CNS Diseases

9	CNS Diseases Amenable to Gene Therapy <i>H. Federoff</i>	117
10	Molecular Therapies for the Nervous System and Skeletal Muscle <i>G. Karpati</i>	159
11	Lentivirus: A Vector for Nervous System Applications <i>S. Kingsman</i>	179

IV Novel Technologies

12	Endothelial Progenitor Cells for Neovascularization <i>T. Asahara</i>	211
13	Therapeutic Aptamers and Antidotes: A Novel Approach to Safer Drug Design <i>B. Sullenger, R.R. White, C.P. Rusconi</i>	217
14	Plasmid-Based Gene Transfer and Antiprogestin-Controllable Transgene Expression <i>J.L. Nordstrom</i>	225
	Subject Index	245
	Previous Volumes Published in This Series	253
