

CONTENTS

ABSTRACT 1

1 INTRODUCTION 3

2 OPTICAL LOSS MECHANISMS IN SEMICONDUCTORS – AN OVERVIEW 5

2.1 Pure field effects 6

2.2 Free charge carrier effects 8

2.3 Heating effects 13

3 EXPERIMENTAL METHODS FOR SPATIALLY RESOLVED ABSORPTION MEASUREMENTS 16

4 MODELING OF OPTICAL LOSS DYNAMICS 21

4.1 Charge carrier dynamics 22

4.1.1 Charge carrier dynamics in an electron-hole plasma 22

4.1.2 Charge carrier dynamics in PDS 23

4.2 Heat dynamics 30

4.2.1 Heat dynamics in an electron-hole plasma 31

4.2.2 Heat dynamics in PDS 32

4.2.3 Self-heating effect in optical microring resonators 38

5 KEY SIGNAL CONTRIBUTIONS IN PHOTOTHERMAL DEFLECTION SPECTROSCOPY 50

5.1 Refractive index field in PDS 51

5.2 Probe beam deflection 53

5.2.1 Probe beam deflection in the bulk 55

5.2.2 Probe beam deflection close to the surface 58

5.2.3 Ray tracing in anisotropic media 61

5.3 Influence of experimental parameters on the PDS signal 62

5.4 Experimental methods and results 66

5.4.1 Thermally induced surface distortion 67

5.4.2 Contributions of linear and quadratic absorption	69
5.4.3 Extraction of the depth resolved attenuation coefficient	71
6 INTENSITY DEPENDENT DEFLECTION SPECTROSCOPY	79
6.1 Experimental methods and sample properties	80
6.2 Determination of the model function	81
6.2.1 Refractive index modulation by absorption	82
6.2.2 Refractive index modulation by pure field effects	88
6.2.3 Total refractive index modulation and model function	91
6.3 Extraction of the absorption parameters	92
CONCLUSION AND OUTLOOK	98
