

Contents

1	Introduction	15
2	Theory: Laser interaction with semiconducting substrates	19
2.1	Optical properties of isotropic solids	20
2.1.1	Thin film optics	21
2.2	Absorption and excitation	26
2.2.1	Linear absorption in silicon	26
2.2.2	Nonlinear absorption	27
2.2.3	Generation of the electron-hole plasma	28
2.2.4	Optical response of the excited semiconductor	29
2.3	Carrier relaxation	31
2.4	Thermal effects	33
2.4.1	Heat diffusion	34
2.4.2	Melting and solidification	35
2.5	Laser ablation	38
2.5.1	Surface morphology	41
2.5.2	Defects and amorphization	42
2.5.3	Structural analysis with Raman spectroscopy	43
3	Methodology: Time-resolved observation of laser processing	47
3.1	Laser processing	49
3.2	Pump-probe microscopy	51
3.2.1	Synchronization of independent beam sources	53
3.2.2	Optical synchronization of femtosecond pulses	56

3.2.3	Transient reflected-light microscopy	57
3.2.4	Infrared transmission microscopy	58
3.3	Automation and data processing	62
3.3.1	Maintaining focus	65
3.3.2	Image processing	66
4	Results: Pulsed laser annealing of amorphous silicon	71
4.1	Local laser-induced crystallization	72
4.1.1	Transient reflectivity	75
4.1.2	Simulation	77
4.1.3	Structural analysis	80
4.1.4	Impact of solidification dynamics on crystal structure . .	82
4.2	Annealing of laser induced amorphization	83
4.3	Excimer laser annealing	86
5	Results: Laser ablation for local opening of dielectric coatings	89
5.1	Excitation	95
5.2	Ultrafast melting	102
5.3	Solidification and amorphization	104
5.4	Delamination of the dielectric layer	110
5.4.1	Modelling thin-film interference during ablation	115
5.4.2	Velocity distribution of cavity expansion	117
5.4.3	Simulation of other ablation effects	119
5.5	Direct ablation at elevated fluence	123
5.6	Delamination promoted by amorphization	130
6	Conclusion	133
6.1	Methodology	133
6.2	Annealing of thin amorphous silicon layers	134
6.3	Ablation of dielectric layers	135
	Publications	139
	Bibliography	141
	Symbols	165
	Acronyms	167

A Samples & Equipment 169

A.1 Equipment 169

A.2 Sample properties 170

B Models & Algorithms 173

B.1 Melt depth parameterization 173

B.2 Delamination TMM model implementation 174

B.3 Delamination TMM model sample fits 176
