

Contents

Preface — V

Chapter 1

History and background — 1

- 1.1 Introduction — 1
- 1.2 Reservoirs — 4
- 1.3 Formation — 5
- 1.4 Conventional gas — 7
 - 1.4.1 Associated gas — 8
 - 1.4.2 Non-associated gas — 11
 - 1.4.3 Gas in geopressurized zones — 13
 - 1.4.4 Gas in tight formations — 14
 - 1.4.5 Gas hydrates — 15
 - 1.4.6 Other definitions — 18
- 1.5 Gas condensate — 19
 - 1.5.1 Lease condensate — 20
 - 1.5.2 Plant condensate — 21
 - 1.5.3 Natural gasoline — 21
 - 1.5.4 Low-boiling naphtha — 22
- 1.6 Uses — 22
- 1.7 Energy security — 28
- References — 29

Chapter 2

Reservoir fluids and reservoirs — 32

- 2.1 Introduction — 32
- 2.2 Reservoir fluids — 35
- 2.3 Sediments — 39
 - 2.3.1 Rock types — 41
 - 2.3.2 Characteristics — 42
 - 2.3.3 Composition — 43
 - 2.3.4 Texture — 43
 - 2.3.5 Structure — 44
- 2.4 Reservoir evaluation — 45
 - 2.4.1 Reservoir geology — 46
 - 2.4.2 Rock types — 47
 - 2.4.3 Temperature — 48
 - 2.4.4 Heterogeneity — 48
 - 2.4.5 Porosity and permeability — 49
 - 2.4.6 Reservoir morphology — 52

2.5	Tight formations —	53
2.5.1	Shale formations —	54
2.5.2	Sandstone and carbonate formations —	55
2.5.3	Development and production —	56
2.6	Reservoir types —	56
2.6.1	Natural gas reservoirs —	59
2.6.2	Gas condensate reservoirs —	63
2.6.3	Crude oil reservoirs —	66
	References —	67

Chapter 3

Reservoir engineering — 71

3.1	Introduction —	71
3.2	Definitions —	72
3.3	Reservoir evaluation —	75
3.3.1	Coring and core analysis —	78
3.3.1.1	Well coring —	80
3.3.1.2	Core analysis —	82
3.3.1.3	Tight reservoirs —	84
3.3.2	Pressure transient testing of wells —	87
3.3.3	Reserves —	88
3.3.3.1	Reserve estimates and material balance —	90
3.3.3.2	Methods for estimating residual gas —	92
3.4	Recovery —	93
3.5	Storage and storage facilities —	100
3.5.1	Depleted reservoirs —	105
3.5.2	Aquifers —	107
3.5.3	Salt caverns —	108
3.5.4	Other types of storage —	110
3.5.4.1	Gas holders —	110
3.5.4.2	Cryogenic storage —	111
3.5.5	Storage measures —	112
3.5.6	Losses during gas storage —	113
3.6	Transportation —	114
3.6.1	Pipelines —	117
3.6.2	Liquefied natural gas —	121
3.6.3	Liquefied petroleum gas —	123
3.6.4	Compressed natural gas —	127
3.6.5	Gas-to-solid —	128
3.6.6	Gas-to-power —	130

- 3.6.7 Gas-to-liquids — 131
- 3.6.8 Gas-to-commodity — 137
- References — 139

Chapter 4

Production engineering — 142

- 4.1 Introduction — 142
- 4.2 Properties of gas mixtures — 147
- 4.3 Flow in the reservoir — 150
 - 4.3.1 Natural flow — 153
 - 4.3.2 Artificial lift methods — 153
- 4.4 Stimulation and remedial operations — 154
- 4.5 Surface production systems — 157
- 4.6 Production engineering — 158
 - 4.6.1 Gas wells — 164
 - 4.6.2 Well completion — 164
 - 4.6.3 Wellhead — 168
 - 4.6.4 Well treatment — 169
 - 4.6.5 Gas production — 170
- References — 173

Chapter 5

Field operations — 175

- 5.1 Introduction — 175
- 5.2 Reserves and reservoir performance — 175
- 5.3 Deliverability — 177
 - 5.3.1 Annular flow — 178
 - 5.3.2 Predicting reservoir performance — 179
 - 5.3.3 Optimum development patterns — 179
 - 5.3.4 Well performance — 180
 - 5.3.5 Material balance — 182
- 5.4 Wellhead operations — 183
 - 5.4.1 Gas and liquid separation — 186
 - 5.4.2 Separator internals — 188
 - 5.4.3 Types of separators — 189
 - 5.4.3.1 Vertical separators — 189
 - 5.4.3.2 Horizontal single-tube separators — 189
 - 5.4.3.3 Horizontal double-tube separators — 190
 - 5.4.3.4 Spherical separators — 191
 - 5.4.4 Factors affecting separation — 191
 - 5.4.4.1 Low-temperature separation — 192
 - 5.4.4.2 High-temperature separation — 193

5.5	Dehydration of natural gas —	193
5.5.1	Gas hydrates —	194
5.5.1.1	Formation —	196
5.5.1.2	Gas production —	196
5.5.1.3	Prediction of hydrate formation —	200
5.5.2	Hydrate control in gas production —	200
5.5.3	Preventing hydrate formation —	201
5.5.4	Preventing wax deposition —	201
5.5.5	Dehydration systems —	202
5.5.5.1	Adsorption of water vapor by solid desiccants —	202
5.5.5.2	Absorption of water vapor by liquid desiccants —	204
5.5.5.3	Dehydration by cooling —	206
	References —	207

Chapter 6

Production — 209

6.1	Introduction —	209
6.2	Darcy and non-Darcy flow in porous media —	209
6.2.1	Gas well inflow under Darcy flow and non-Darcy flow —	211
6.2.2	Steady-state and pseudosteady-state flow —	211
6.2.3	Transient flow —	212
6.2.4	Turbulent flow —	212
6.3	Hydraulic fracturing —	212
6.3.1	The process —	216
6.3.2	Equipment —	221
6.3.3	Well development and completion —	224
6.3.4	Fracturing fluids —	225
6.3.5	Fracture design —	226
6.3.5.1	Fracture patterns —	227
6.3.5.2	Fracture optimization —	229
6.3.6	Fracture monitoring —	232
6.3.7	Fracture diagnostics —	234
6.3.7.1	Direct far-field techniques —	234
6.3.7.2	Direct near-wellbore techniques —	235
6.3.7.3	Indirect fracture techniques —	235
6.3.8	Performance of a hydraulically fractured well —	235
6.3.9	Fracturing horizontal gas wells —	236
6.4	Fluids management —	236
6.4.1	Water requirements, use, and sources —	238
6.4.1.1	Requirements —	238
6.4.1.2	Use —	240
6.4.1.3	Sources —	242

- 6.4.1.3.1 Surface water — 244
- 6.4.1.3.2 Groundwater — 245
- 6.4.1.3.3 Municipal water supplies — 246
- 6.4.1.3.4 Wastewater and power plant cooling water — 246
- 6.4.1.3.5 Reservoir water and recycled flow back water — 246
- 6.4.1.3.6 Other sources — 247
- 6.4.2 Water contamination — 248
- 6.4.3 Water disposal — 250
- 6.4.4 Waste fluids — 252
- 6.4.4.1 Fracturing fluid requirements — 254
- 6.4.4.2 Fracturing fluid composition — 255
- 6.4.4.3 Fracturing fluid handling and storage — 256
- 6.4.4.4 Transportation — 256
- References — 258

Chapter 7

The environment — 263

- 7.1 Introduction — 263
- 7.2 Environmental issues — 267
 - 7.2.1 Hydrocarbon contamination — 269
 - 7.2.2 Soluble contaminants — 270
 - 7.2.3 Other sources of contamination — 270
 - 7.2.4 Air pollutants — 271
 - 7.2.4.1 Nitrogen oxides — 272
 - 7.2.4.2 Carbon monoxide — 272
 - 7.2.4.3 Volatile organic compounds — 272
 - 7.2.4.4 Sulfur oxides — 273
 - 7.2.4.5 Particulate matter — 273
 - 7.2.4.6 Greenhouse gases — 273
 - 7.2.5 Emissions during recovery and processing — 274
 - 7.2.5.1 Emissions during exploration, production, and delivery — 274
 - 7.2.5.2 Emissions during processing — 275
 - 7.2.5.3 Emissions during combustion — 277
 - 7.2.6 Smog and acid rain — 281
 - 7.2.7 Emissions control — 283
- 7.3 Natural gas and global climate change — 286
- 7.4 The future — 286
- References — 288

Conversion factors and constants — 289

- 1 Area — 289
- 2 Compressibility factor — 289

3	Concentration conversion —	290
4	Density —	290
5	Conversion —	291
	Flow —	291
	Mass —	291
	Pressure —	291
	Volume —	292
6	Gas constant —	292
7	Length conversion —	293
9	Sludge conversion —	295
10	Standard gas conditions —	295
11	Temperature conversion —	295
12	Thermodynamic data at 25 °C for selected constituents of natural gas —	296
13	Weight conversion —	296
14	Volume conversion —	296
15	Other conversions —	298

Glossary — 299

Appendix A Unconventional gas resources — 349

**Appendix B Illustration of the terms used to describe the resources and
reserves of natural gas — 377**

Appendix C Properties of natural gas — 383

Appendix D Gas cleaning processes — 435

**Appendix E Examples of ASTM test methods for natural gas and gas
condensate — 461**

**Appendix F Examples of the gas processors association test methods
for natural gas — 465**

About the author — 467
