

Contents

The new chassis of Volkswagen ID.3 within MEB platform – Front Axle, Rear Axle

Andreas Saathoff and Thomas Kersten

Without A Chassis We Will Go Nowhere

Yousuke Sekino

The All-New YARIS

Masato Fujiyama, T. Kondo and T. Kaneko

Automated Driving Requires International Regulations

Benjamin Koller and Robert Matawa

Porsche Taycan - recuperative brake system for combined braking

Martin Reichenacker and Bernhard Schweizer

The Integral Bushing Rear Suspension Architecture of the New Lincoln Corsair

Friedrich Wolf-Monheim, Paul Zandbergen, Daniel Mainz, Ralf Hintzen and Timothy Drotar

An Efficient Evaluation Method for Longitudinal Driver Assistance Systems within a Consistent KPI based Development Process

Jonas Nesensohn, S. Lefèvre, D. Allgeier, B. Schick and F. Fuhr

The Power of Oil – Influence of Shock Absorber Oil on Vehicle Ride and Handling Performance

Shinji Kato and Navid Samadi

How to extract advantage from driving simulator technology in developing brand specific vehicle dynamics

Florian Goy, Antonino Pizzuto, Christian Ludwig and Alessandro Salgarello

Designing and Assessing the Driving Experience of a Tilting Vehicle

Tom Lehmkuhl and Lutz Eckstein

Basic Study for Materials of Tire and Wheel for Dynamic Wireless Power Transfer System with In-Wheel Coil

Osamu Shimizu, Takashi Gunji and Isao Kuwayama

Analysis of tire wet grip mechanisms and their respective weightings in a wet braking test

Frédéric Biesse and Violaine Todoroff

Tire modeling for extreme handling maneuvers

Ioannis Konstantinou, Willem Versteden and Konstantin Sedlan

Transient Motion Analysis Based Objective Quantification of Cornering Feedback and Its Application to Vehicle Motion Control

Jun-Mo Lee and Adolfo Tee

Enhanced Characterization of Suspension Systems for Virtual Chassis Development

Stefan Büchner, Norbert Deixler, Ralph Stroph and Markus Lienkamp

The efficient use of HiL simulation and vehicle tests for in-house software development at Porsche

Benedikt Jooß, Thomas Rotter and Dieter Schramm

Analysis of Suspension Dynamic Characteristics for Ride Comfort Development Using Suspension Rig Test

Seungmin Kwon, Yong-Sub Yi, Jieun Song, Jongmin Jung and Ho Joon Park

Simulating and optimizing the dynamic chassis forces of the Audi e-tron

Stefan Uhlar

Lightweight Composite Spring for the new Transit Camper

Alberto Girelli Consolaro, Francesco Italiano, Paul Zandbergen, Nick Watson and Ian MacLachlan

Design of an innovative car wheel suspension concept with a fiber-reinforced plastic spring/control arm

Ludwig Seethaler

Utilizing artificial neural networks and design solution spaces to cope with the complexity in subframe design

Martin Kundla, Dieter Schramm, Markus Zimmermann, Niels Justen, Florian Scheirl, Tim Lindner, Florian Till and Jaffrey Immanuel Jeyakumar

Virtual operational strength analysis for commercial vehicles

Robert Buchmann, Roland Krivachy and Alexander Lion

Independent Design of Yaw Rate Gain and Phase Characteristics in SBW Vehicle

Kei Kitahara and Hiroshi Mouri

Ford steer-by-wire technology development using the example of vehicle ingress and egress

Florian Rath, Alexander Ein Waldt and Oliver Nehls

Steering Feel of Lane Keeping Assist Systems

Matthias Becker, Manuel Höfer and Peter E. Pfeffer

Enabling flexible Interiors for existing vehicle platforms with a Steering Wheel integrated Steer-by-Wire Force Feedback Actuator

Christian Strümpfer, Roland Grimm and Daniel Alt

Objective and Subjective Steering Feel HiL Testing on a New High Performance Steering HiL with Virtual Vehicle Prototypes

Markus Lemmen, Michael Peperhowe, Olav Lange and Michael Moczala

Effects of Hub Bearing Integrated with Additional Wheel Steering System on Vehicle Agility and Stability

Mitsunori Ishibashi, Makoto Yamakado, Yoshio Kano, Masato Abe, Atsushi Ito, Norio Ishihara and Hirokazu Ohba

Steer-by-Wire in the Context of the Connected Vehicle: Opportunities for Future Steering Innovations

Joe Klesing

Optimal design of a DC brushless motor for automotive brake actuation

Francesco Camozzi, Antonino DI GERLANDO, Cristiano Fissore,
Massimiliano Gobbi, Gianpiero Mastinu, Paolo RIGHETTINI,
Roberto Strada and Damiano Todisco

Brake-by-Wire Actuator for Electromechanical Disc Brake

Carsten Kügeler, Dominic Scopacasa, Joachim Funke, Ingo Greue and
Jens Hunecke

Wheel individual longitudinal control systems

Eberhard Drechsel, Maximilian Böhle and Miso Kvesic

**Test Procedure Development and Validation for Brake Wet Fading in the
FKFS Thermal Wind Tunnel**

Domenik Schramm, Adrian Bernhard, Timo Kuthada,
Jochen Wiedemann, Andreas Wagner and
Lars Altseimer

On the vehicle state estimation benefits of smart tires

Victor Mazzilli, D. Ivone, V. Vidal Muñoz, S. De Pinto, P. Camocardi, L. Pascali,
P. Gruber, A. Doria Cerezo, G. Tarquinio and A. Sorniotti

Road-Load Performance Prediction Limitations by RRC Reduction

Ryosuke Okubo

Extended Evaluation of Tyre Comfort using Wavelet Analysis

Ventseslav Yordanov, Lutz Eckstein and Mark Harris

An optimized tire test method on snow

Mauro Martino and Salvatore Danise

Digital design of chassis and tire: virtual is real!

Patrick Pallot

Noise measurement in accordance with UNECE R 51.03: Three years' experience with the new standard

Bernhard Gerster, Marcel Strup and Stefan Sempach
