Preface — V

Acknowledgment — VII

1	A brief review of calculus for physics — 1
1.1	Coordinate systems — 1
1.2	Scalar and vector quantities — 2
1.3	Some properties of vectors — 3
1.3.1	Equality of two vectors — 3
1.3.2	Adding vectors — 3
1.3.3	Negative of a vector — 6
1.3.4	Subtracting vectors — 6
1.3.5	Multiplying a vector by a scalar — 7
1.3.6	Components of a vector and unit vectors — 7
1.4	Vector multiplication — 10
1.4.1	Dot product of two vectors — 10
1.4.2	Cross product of two vectors — 11
1.5	Some scientific notations — 13
1.6	Some basic rules of algebra — 15
1.6.1	Power — 16
1.6.2	Factoring — 17
1.6.3	Quadratic equations — 17
1.6.4	Linear equations — 17
1.6.5	Logarithms — 18
1.7	Geometry — 19
1.8	Trigonometry — 20
1.9	Derivative — 22
1.9.1	Derivative of the product of two functions — 22
1.9.2	Derivative of the sum of two functions — 22
1.9.3	The chain rule of differential calculus — 23
1.9.4	The second derivative — 23
1.10	Exercises — 23
2	Physics and measurement — 25
2.1	Standards of length, mass, and time — 25
2.1.1	Length — 25
2.1.2	Mass — 26
2.1.3	Time — 27
2.1.4	British engineering system of units — 27
2.2	Density — 29

2.3	Dimensional analysis — 30
2.4	Conversion of units — 32
2.5	Significant figures — 32
2.6	Exercises — 34
3	One-dimensional motion — 36
3.1	Displacement — 36
3.2	The average velocity and speed — 37
3.2.1	Graphical interpretation of the velocity — 37
3.3	Instantaneous velocity and speed — 38
3.3.1	Graphical interpretation of the instantaneous velocity — 40
3.4	Average acceleration — 41
3.4.1	Graphical interpretation of the average acceleration — 42
3.5	Instantaneous acceleration — 42
3.5.1	Graphical interpretation of instantaneous acceleration — 43
3.6	One-dimensional motion with constant acceleration — 43
3.6.1	Kinematic equations of motion — 44
3.7	Freely falling objects — 46
3.8	Exercises — 47
4	Two- and three-dimensional motion — 55
4.1	The displacement, velocity, and acceleration vectors — 55
4.2	Three-dimensional motion with constant acceleration — 58
4.3	Projectile motion — 61
4.4	Uniform circular motion — 65
4.5	Non-uniform circular motion — 68
4.6	Relative motion — 69
4.7	Exercises — 71
5	The laws of motion — 77
5.1	The concept of force — 77
5.2	Measuring the strength of a force — 79
5.3	Newton's first law and inertia frame — 80
5.4	Newton's second law of motion — 81
5.5	Newton's third law — 83
5.6	Mass and weight — 84
5.7	Elastic forces — 87
5.8	Friction and dissipation forces — 87
5.8.1	Static friction — 88
5.8.2	Kinetic friction — 89
5.8.3	Case 1 — 89
5.8.4	Case 2 — 92

5.9	Exercises — 94
6	Circular motion and other applications of Newton's laws — 97
6.1	Newton's second law applied to uniform circular motion — 97
6.2	Non-uniform circular motion — 98
6.3	Motion in accelerated frames — 99
6.4	Exercises — 101
7	Work and kinetic energy — 104
7.1	Work done by a constant force — 104
7.2	The work done by non-constant forces — 106
7.3	Work done by a spring — 107
7.4	Work–energy relation — 109
7.5	Power — 110
7.6	Exercises — 111
8	Potential energy and conservation of energy — 115
8.1	Potential energy — 115
8.1.1	Gravitational potential energy — 115
8.1.2	Elastic potential energy — 117
8.2	Conservative and non-conservative forces — 118
8.2.1	Conservative forces — 118
8.2.2	Non-conservative forces — 119
8.3	Conservative forces and potential energy — 120
8.4	Conservation of mechanical energy — 121
8.5	Work done by an applied force — 122
8.6	Exercises — 123
9	Linear momentum and collisions — 127
9.1	Linear momentum and Newton's second law — 127
9.2	Conservation of momentum for a two-particle system — 128
9.3	Impulse and momentum — 129
9.4	Collisions — 131
9.4.1	Elastic collisions — 133
9.4.2	Inelastic collision — 134
9.5	Center of mass — 135
9.6	Motion of a system of particles — 138
9.7	Exercises — 140
10	Rotation of a rigid body — 144
10.1	Angular displacement, velocity, and acceleration — 144
10.2	Rotational kinematics — 147

10.3	Angular and linear quantities —	148
10.4	Rotation energy —	150
10.5	Calculation of the moments of inertia —	151
10.6	Torque —	153
10.7	Relation between the torque and angular acceleration —	154
10.8	Work, power and energy in rotational motion —	156
10.9	Exercises —	158
11	Rolling motion and angular momentum —	162
11.1	Rolling motion of a rigid body —	162
11.2	Angular momentum of a particle —	163
11.3	Angular momentum of a system of particles —	165
11.4	Angular momentum of a rigid body —	167
11.5	Precessional motion —	169
11.6	Exercises —	170
12	Static equilibrium and elasticity —	174
12.1	Conditions for equilibrium —	174
12.2	Elastic properties of solids —	175
12.2.1	Stress —	175
12.2.2	Strain —	177
12.2.3	Bulk modulus —	178
12.3	Elasticity and plasticity —	179
12.4	Exercises —	180
13	Oscillatory motion —	182
13.1	Simple harmonic motion —	182
13.2	Energy of the simple harmonic oscillator —	186
13.3	Simple pendulum —	188
13.4	Physical pendulum —	190
13.5	Exercises —	192
14	Gravity —	195
14.1	Universal law of gravitation —	195
14.2	Second law of Newton and gravity —	196
14.3	Gauss's law of gravity —	197
14.4	Gravitational potential —	198
14.5	Kepler's laws —	200
14.5.1	First Kepler law —	200
14.5.2	Kepler's second law —	201
14.5.3	Kepler's third law —	203
14.6	Orbits of planets, spaceships, and satellites —	203

14.7 Exercises — 205

A Solutions — 207

Bibliography — 339

Index — 341
