Zusammenfassung	XI
Abstract	XIII
1 Introduction	1
1.1 Passive Vibration Control	1
1.1.1 Single Particle Impact Dampers	5
1.1.2 Particle Dampers	6
1.2 Objectives of this Research	14
1.3 Thesis Outline	16
2 Lagrangian Particle Methods	19
2.1 Discrete Element Method	20
2.1.1 Normal Contact Forces	20
2.1.2 Tangential Contact Forces	21
2.1.3 Non-Convex Shapes and Rigid Boundaries	22
2.2 Smoothed Particle Hydrodynamics	23
2.2.1 Kernel and Particle Approximation	24
2.2.2 SPH Discretization of the Navier-Stokes Equations	25
2.2.3 Pressure Evaluation	26
2.2.4 Further Extensions and Corrections	26
2.2.5 Modelling Solid Boundaries	28
2.2.6 Turbulence Modelling	30
2.3 SPH-DEM Coupling	36
2.3.1 Application to Free-Surface Flows Containing Solids	37

3	Modelling a Conventional Particle Damper	43
3.1	Ring-Down Experimental Setup	43
3.2	Simulation of a Conventional Particle Damper	47
3.2.1	Generation of Initial Particle Packings	47
3.2.2	Parameter Identification Procedure	48
3.3	Important Factors Influencing the Particle Damper Performance	51
3.3.1	Effect of the Container Length	51
3.3.2	Effect of the Number of Particles	53
3.3.3	Effect of Other Parameters	55
4	Enhancing Dissipation of Particle Dampers by Partially Filling them with a Liquid	57
4.1	Liquid-Filled PD with Spherical Shapes	57
4.1.1	Experimental Results	59
4.1.2	Simulation of Liquid-Filled PDs with Spherical Shapes	60
4.2	Liquid-Filled PD with Non-Convex Shapes	69
4.2.1	Experimental Results	71
4.2.2	Simulation of Liquid-Filled PDs with Non-Convex Shapes	73
4.2.3	Effect of Solid-Liquid Ratio	74
4.2.4	Effect of Solid Particle Density	76
5	Enhancing Dissipation of Particle Dampers using Obstacle-Grids	81
5.1	Forced Response Experimental Setup	83
5.2	Experimental Results	87
5.3	Simulation of PDs with Obstacle-Grid	89
5.4	Influence of Cell-Size on the Dissipation Performance	94
5.5	Efficient Computations Using Periodic Boundaries	95
6	Investigating the Multi Frequency Damping Properties of Particle Dampers	99
6.1	Experimental Setup	100
6.2	Experimental Results	102

6.2.1	Frequency Response of the Host Structure	102
6.2.2	Investigated Damper Configurations	104
6.2.3	Influence of PD on the Host-Structure	105
6.2.4	Particle Damper versus Tuned Mass Damper	108
6.2.5	Towards Quantifying Broadband Dissipation	109
6.2.6	Concluding Recommendations and Remarks	111
7	Summary and Outlook	113
	Symbols	117
	Literature	119
