Preface — V

List of contributing authors — XI

Zbigniew Dutkiewicz

1 Computational methods for calculation of protein-ligand binding affinities in structure-based drug design — 1

- 1.1 Introduction — 1
- 1.1.1 Components of binding free energy — 3
- 1.2 Computational chemistry methods in binding affinity calculations — 6
 - 1.2.1 Molecular mechanics — 6
 - 1.2.2 Quantum-mechanics methods — 7
- 1.3 Virtual screening — 10
 - 1.3.1 Classical SFs — 11
 - 1.3.2 QM scoring functions — 12
- 1.4 Rescoring of docked ligands and lead optimization — 14
 - 1.4.1 Single-structure approaches — 14
 - 1.4.2 QM/MM methods — 14
 - 1.4.3 Linear-scaling methods — 15
 - 1.4.4 Fragmentation methods — 15
 - 1.4.5 Fully quantum mechanical — 16
 - 1.4.6 End-point approaches — 16
 - 1.4.7 FEP approaches — 22
- 1.5 Conclusions — 26
- References — 26

Ha Vinh Lam Nguyen and Isabelle Kleiner

2 Understanding (coupled) large amplitude motions: the interplay of microwave spectroscopy, spectral modeling, and quantum chemistry — 41

- 2.1 Introduction — 41
- 2.2 Spectrometer technology — 45
 - 2.2.1 Resonator-based molecular jet FTMW (2 – 40 GHz) spectrometers: *high resolution and sensitivity but time consuming for survey spectra* — 45
 - 2.2.2 Chirped-pulse molecular jet FTMW spectrometers: *how to reduce the time requirements for survey spectra?* — 46
- 2.3 Quantum chemical calculations — 47
 - 2.3.1 Geometry optimizations: *how to start?* — 48

2.3.2	Method choice: <i>be careful. Discrepancy!</i> — 48
2.3.3	Basis set choice: <i>make a lot of tests...</i> — 50
2.3.4	Estimation of the torsional barriers: <i>still challenging</i> — 51
2.4	A small historical perspective on large amplitude motions — 51
2.4.1	Internal rotation — 52
2.4.2	Inversion tunneling — 56
2.4.3	Interaction of internal rotation(s) with tunneling motion(s): <i>from rotation wagging to hydrogen transfer</i> — 56
2.5	Spectral modeling — 57
2.5.1	Global fits of rotational spectra with LAMs: <i>the way to achieve standard deviations within experimental accuracy</i> — 57
2.5.2	Separate fits of LAM species: <i>quick check of the assignments</i> — 61
2.6	Variety of large amplitude motions in molecules and their applications — 65
2.6.1	Challenges in internal rotation problems: <i>some examples</i> — 65
2.6.2	Sensing the molecular conformations of natural substances by internal rotors — 69
2.6.3	Coupled internal rotations — 72
2.6.4	Inversion tunneling — 75
2.7	Conclusions — 76
	References — 78

Iwona Gulaczyk and Marek Kręglewski

3	Floppy molecules—their internal dynamics, spectroscopy and applications — 93
3.1	Introduction — 93
3.2	Large amplitude vibrations (LAVs) — 94
3.2.1	Theories involving LAVs — 95
3.2.2	Types of large amplitude vibrations — 99
3.3	Permutation–inversion group theory — 105
3.4	Rovibrational Hamiltonian for a floppy molecule — 107
3.5	Hydrazine molecule — 110
3.5.1	Explicit rovibrational Hamiltonian for hydrazine — 113
3.5.2	Effective rovibrational Hamiltonian for hydrazine — 118
3.6	Floppy molecules applications — 125
	References — 127

Donata Pluskota-Karwatka and Marcin Hoffmann

4	Computational studies on statins photoactivity — 135
4.1	Introduction — 135
4.2	Photochemistry of rosuvastatin and pitavastatin — 137
4.3	Photochemistry of fluvastatin — 142

- 4.4 Photochemistry of atorvastatin — 146
- 4.5 Effect of pH — 151
- 4.6 Summary and conclusions — 154
- References — 155

Maciej Staszak

- 5 Artificial intelligence in the modeling of chemical reactions kinetics — 159**
 - 5.1 Concise and brief description of the artificial intelligence methods — 159
 - 5.2 Kinetics of chemical reactions in industrial applications — 162
 - 5.3 Reasons for artificial intelligence models use in chemical kinetics — 163
 - 5.4 Selection of recent papers on artificial intelligence methods in prediction of kinetics of various chemical processes — 165
 - 5.4.1 Neural network training with Arrhenius kinetics for equilibrium reactions — 165
 - 5.4.2 Catalytic cracking — 166
 - 5.4.3 Photochemical reactions — 168
 - 5.4.4 Laminar and turbulent combustion modeling — 170
 - 5.4.5 Enzymatic reaction kinetics — 172
 - 5.4.6 Deep learning based on quantum modeling of chemical reactions paths — 173
 - 5.4.7 Coupling microscale kinetics and macroscale chemistry using AI Random Forest algorithms, catalysis on RuO₂(110) surface — 175
 - 5.4.8 Hydrogen oxidation — 176
 - 5.5 Summary — 178
 - References — 179

Magdalena Olkiewicz, Bartosz Tylkowski, Josep M. Montornés,
Ricard Garcia-Valls and Iwona Gulaczyk

- 6 Modelling of enzyme kinetics: cellulose enzymatic hydrolysis case — 181**
 - 6.1 Introduction — 181
 - 6.2 Modelling of enzyme kinetics — 183
 - 6.2.1 The Michaelis-Menten kinetic — 183
 - 6.2.2 Modelling over the years — 185
 - 6.2.3 Classification of models — 186
 - 6.3 Modelling of cellulose enzymatic hydrolysis — 188
 - 6.3.1 Cellulose hydrolysis — 188
 - 6.3.2 Model examples used in cellulose hydrolysis — 191

- 6.4 Industrial applications — **195**
- 6.5 Conclusions — **198**
- References — **200**

Francis M. Gaitho, Genene T. Mola and Giuseppe Pellicane

7 Computational approach to the study of morphological properties of polymer/fullerene blends in photovoltaics — 205

- 7.1 Introduction — **205**
- 7.2 Computational models for polymer blends in BHJ PCs — **209**
 - 7.2.1 Course-grained model — **209**
 - 7.2.2 The bead-spring model — **210**
 - 7.2.3 Process-device model — **214**
- 7.3 Importance of morphological properties in the development of BHJ PCs — **215**
- 7.4 Past, current and future trends in the application of polymer interfaces in BHJ PCs — **216**
 - 7.4.1 Conjugated polymers used in BHJ PCs — **216**
 - 7.4.2 Inverted structure BHJ PCs — **218**
 - 7.4.3 Challenges and opportunities — **219**
- 7.5 Conclusion — **220**
 - Notes — **221**
 - References — **221**

Irene Tsibranska, Serafim Vlaev, Daniela Dzhonova, Bartosz Tylkowski, Stela Panyovska and Nadezhda Dermendzhieva

8 Modeling and assessment of the transfer effectiveness in integrated bioreactor with membrane separation — 227

- 8.1 Introduction — **227**
 - 8.1.1 Scope of application — **228**
 - 8.1.2 Research trends — **229**
- 8.2 Research results — **233**
 - 8.2.1 Flow behavior — **234**
 - 8.2.2 Species transport — **236**
 - 8.2.3 Mass transfer — **237**
- 8.3 Discussion — **238**
 - 8.3.1 Inference on immersed membrane effectiveness — **238**
- 8.4 Conclusion — **242**
 - References — **245**
