Kurzfassung	XI
Abstract	XIII
1 Introduction	1
1.1 Uncertainty Analysis	2
1.2 Automotive Passive Safety Systems	5
1.2.1 Numerical Crash Simulation	8
1.2.2 Uncertainty Quantification in Crash Simulation	9
1.3 Aims and Objectives	11
1.4 Outline of this Thesis	12
2 Possibility Theory and Imprecise Probabilities	15
2.1 Uncertain Variables	16
2.2 Imprecise Probabilities	16
2.3 Possibility Theory	20
2.3.1 Possibility as an Upper Probability	22
2.3.2 Specificity of Possibility Distributions	24
2.3.3 Conditioning in Possibility Theory	24
2.3.4 Epistemic Independence of Uncertain Variables	25
2.4 Relation to Other Uncertainty Theories	25
2.4.1 Fuzzy Set Theory	26
2.4.2 Evidence Theory and Random Sets	26
2.4.3 Interval Analysis	27
2.5 Constructing Possibility Distributions	28

2.5.1	Data-Based Possibility Distributions	29
2.5.2	Consonant Random Sets	30
2.5.3	Order Preserving Optimal Transform	31
2.6	Propagating Possibility – The Possibilistic Forward Problem	32
2.6.1	Consistent Uncertainty Propagation	33
2.7	General Discussion	35
3	Conventional Strategies for Possibilistic Uncertainty Propagation	37
3.1	Superlevel Approach and Interval Arithmetic	39
3.2	Sampling Techniques	40
3.2.1	Uniform Random and Pattern-Based Sampling Sequences	41
3.2.2	Sequential Weighted Sampling	42
3.3	Surrogate-Based Techniques	44
3.3.1	Kernel Interpolation	45
3.3.2	Artificial Neural Networks	46
3.3.3	Sparse-Grid Interpolation	47
4	Possibilistic Multifidelity Modeling	51
4.1	Concept of Multifidelity Modeling	51
4.2	Possibilistic Multifidelity Scheme	52
4.2.1	Weak Dependency	54
4.2.2	Strong Dependency	54
4.3	Estimation of the Conditional Possibility Density Function	55
4.4	Derivation of Appropriate Low-Fidelity Surrogates	57
4.5	Sample Selection	58
4.6	Proof of Concept	59
4.7	General Remarks	62
4.7.1	Computational Efficiency	64
4.7.2	Multifidelity Superlevel Optimization	65
5	Uncertainty Quantification in Large-Scale Crash Simulation	67

5.1	Quantification of Uncertain Parameters	68
5.1.1	Passenger Weight	68
5.1.2	Impact Velocity	69
5.2	Numerical Test Setup	72
5.2.1	High-Fidelity Model	72
5.2.2	Physics-Aware Low-Fidelity Models	74
5.3	Quantity of Interest	75
5.4	Results	77
5.4.1	Low-Fidelity Results	77
5.4.2	Multifidelity Results	79
5.5	Concluding Remarks	83
6	Robust Design of a Crumple-Zone Structure under Uncertainty	87
6.1	Robust Optimization in Possibility Theory	87
6.1.1	Uncertain Objective Function	88
6.1.2	Uncertain Constraints	89
6.2	Problem Description and Simulation Setup	90
6.2.1	Shape Optimization Using Free-Form Deformation	91
6.2.2	Formulation of the Optimization Problem	92
6.2.3	Utilizing PMFM for Optimization under Uncertainty	94
6.2.4	Optimal Design	94
7	Conclusion and Outlook	97
7.1	Summary and Conclusion	97
7.2	Outlook	100
7.2.1	Uncertainty Quantification and PMFM	100
7.2.2	Applications	101
	Literature	103
	Abbreviations, Symbols, and Notations	117
