

Contents

1	Introduction — 1
2	Bio-inspired and bio-hybrid materials — 3
2.1	Biomimetic functional materials — 3
2.2	Protein-based functional materials — 7
2.3	Bioelectronics — 26
2.4	Microorganism-synthesized biomimetic materials — 29
2.5	Biomimetic robotics — 37
3	Biomimetic surfaces — 43
3.1	Adhesion and wetting — 43
3.2	Color and photonics — 54
3.3	Biosensing — 59
3.4	Cell-surface interactions — 60
4	Artificial Organs and Tissue Engineering — 69
4.1	Artificial organs — 69
4.1.1	Organoids — 71
4.1.2	Three-dimensional organ printing — 75
4.2	Tissue engineering — 78
4.2.1	Cell seeding and growth in engineered tissues — 81
4.2.2	TE scaffolds — 82
4.2.3	Tissue-engineered cartilage: a case study — 100
4.3	Tissue engineering and drug design — 104
5	Biomineralization — 108
5.1	Protein- and peptide-associated biomineralization — 109
5.2	Organism-templated biomineralization — 119
6	Synthetic biology — 132
6.1	Synthetic proteins — 133
6.2	Directed evolution — 141
6.3	Protein modeling and synthetic proteins — 146
6.4	Engineered oligonucleotides and synthetic genes — 153
6.5	Mimicking functional biomolecules — 156
6.6	Artificial chromosomes — 165
6.7	Engineered microorganisms — 168

7	Artificial cells — 171
7.1	Biomimetic membranes — 172
7.2	Artificial cell division — 182
7.3	Biomolecules encapsulated in artificial cells — 185
7.4	Artificial replication — 187
8	Drug delivery — 193
9	DNA and RNA nanotechnology — 212
9.1	Basics of DNA nanostructures — 212
9.2	DNA origami — 214
9.3	DNA-based advanced materials — 222
9.4	RNA nanostructures — 229
9.5	DNA-based computing — 232
10	Mimicking biological phenomena and concepts — 236
10.1	Catalytic antibodies — 236
10.2	Artificial photosynthesis — 238
10.3	Bio-inspired motors — 241
10.4	Artificial muscles — 245
10.5	Biomimetic pores and channels — 249
10.6	Biomimetic signaling pathways — 252
10.7	Electronic noses — 253
10.8	Neural networks and biologically-inspired computers — 259
Further Reading — 265
