Part I From Gravity to Curved Momentum Space and Non-commutative Spacetime

1 Invitation: Gravity, Point Particles, and Group-Valued Momenta	3
1.1 Introduction	3
1.2 2+1 Gravity, Particles, and Curvature of Momentum Space	7
References	13
2 Gravity in 2+1 Dimensions as a Chern–Simons Theory	15
2.1 Pure Gravity in 2+1 Dimensions	15
2.2 Particle Coupling	21
2.3 Effective Deformed Single Particle Action	26
2.4 Properties of the Deformed Lagrangian	31
2.5 The Case of Many Particles	34
2.6 κ -Carrollian Deformation	37
2.7 Deformed Spacetime Symmetries of 2+1 Quantum Gravity	42
References	47
3 Gravity in 3+1 Dimensions, Particles, and Topological Limit	49
3.1 From 3+1 to 2+1 Dimensions via Dimensional Reduction	49
3.2 Gravity as a Constrained BF Theory	52
3.3 Particles Coupled to Gravity	59
3.4 Equations for the Particle–Gravity System	62
3.5 The Topological Vacuum	65
3.6 Effective Deformed Particle	67
References	70

Part II Deformed Particles and Their Symmetries

4 Deformed Classical Particles: Phase Space and Kinematics	73
4.1 From Symplectic Manifolds to Poisson–Lie Groups	73
4.1.1 From Symplectic Manifolds to Poisson Manifolds	74
4.1.2 Lie Groups as Phase Spaces	75

4.1.3	Deforming Phase Spaces: The Classical Doubles	82
4.2	Relativistic Spinless Particle: Flat Momentum Space	84
4.3	Deforming Momentum Space to the $AN(n)$ Group	86
4.4	Deforming Momentum Space to the Group $SL(2, \mathbb{R})$	91
4.5	Relativistic Hamiltonian Mechanics with Curved Momentum Space	95
4.6	κ -Poincaré Particle—The Free Case	101
4.7	The System of Two κ -Deformed Particles	107
4.7.1	Translations	109
4.7.2	Lorentz Symmetry	111
	References	114
5	Hopf Algebra Relativistic Symmetries: The κ-Poincaré Algebra	115
5.1	Hopf Algebra Structures in Quantum Theory	115
5.2	The κ -Poincaré Hopf Algebra	127
	References	139
 Part III An Introduction to κ-Deformed Fields		
6	Classical Fields, Symmetries, and Conserved Charges	143
6.1	Preliminaries	143
6.1.1	More on the κ -Poincaré Algebra	147
6.1.2	Non-commutative Calculus	151
6.1.3	Weyl Maps and $\star$ -Product	154
6.1.4	Summary of the Technical Tools	155
6.2	Action and Field Equations	158
6.3	Complex Scalar Field and Momentum Space Action	161
6.4	Poincaré Symmetry of the Action	165
6.5	Symplectic Structure	166
6.6	Conserved Charges	169
	References	171
7	Free Quantum Fields and Discrete Symmetries	173
7.1	Free κ -Deformed Quantum Fields: The Feynman Propagator	173
7.1.1	The κ -Deformed Free Field Partition Function	173
7.1.2	The Feynman Propagator	176
7.2	Creation/Annihilation Operators Algebra	180
7.3	Discrete Symmetries	183
7.3.1	Parity $\mathcal{P}$	183
7.3.2	Time Reversal $\mathcal{T}$	184
7.3.3	Charge Conjugation $\mathcal{C}$	185
7.4	Properties of One-Particle States	186
	References	188
	Index	189
