Preface — V

Contributors List — XIII

Yujiro Hayashi

1	Domino and one-pot syntheses of biologically active compounds using diphenylprolinol silyl ether — 1
1.1	Introduction — 1
1.2	Diphenylprolinol silyl ether catalyst — 2
1.2.1	The general reaction model — 2
1.2.2	Effect of the silyl substituent on diarylprolinol silyl ether — 4
1.2.3	Effect of the aryl substituents on diarylprolinol silyl ether [15] — 4
1.3	Syntheses of baclofen — 5
1.4	Synthesis of telcagepant — 8
1.5	Synthesis of oseltamivir — 9
1.5.1	Total synthesis of oseltamivir in 60 min — 9
1.5.2	Multistep continuous flow synthesis for (–)-oseltamivir — 12
1.6	Synthesis of ABT-341 — 13
1.7	Synthesis of prostaglandins — 14
1.8	Synthesis of estradiol — 15
1.9	Horsfiline and coerulescine — 20
1.10	Summary — 22
	References — 22

Ierasia Triandafillidi, Errika Voutyritsa and Christoforos G. Kokotos

2	Recent advances in reactions promoted by amino acids and oligopeptides — 29
2.1	Introduction — 29
2.1.1	α -Functionalization of carbonyl compounds — 30
2.1.2	Olefins as electron acceptors — 47
2.1.3	Reactions including carbon–nitrogen bond — 52
2.1.4	Addition to aromatic rings — 58
2.1.5	Other reactions and applications — 60
2.2	Conclusion — 72
	References — 73

Anthony J. Burke and Gesine J. Hermann

3	Amino-cinchona derivatives — 85
3.1	Introduction — 85
3.2	Amino-cinchona catalysed reactions — 87

3.2.1	Conjugate addition reactions —	87
3.2.2	Oxa-Diels–Alder reactions —	92
3.2.3	α -Fluorination reactions —	92
3.2.4	Peroxidation reactions —	94
3.2.5	Alkylation reactions —	95
3.3	Amino-cinchona amide catalysed reactions —	96
3.3.1	Conjugate addition reactions —	96
3.3.2	Aldol reactions —	97
3.3.3	Cycloaddition reactions —	97
3.3.4	Ring-opening reactions —	98
3.3.5	Hydrosilylation reactions —	99
3.4	Amino-cinchona thioamide catalysed reactions —	100
3.4.1	Decarboxylative Mannich and decarboxylative protonation reactions —	100
3.5	Amino-cinchona sulfonamide catalysed reactions —	100
3.5.1	Conjugate addition reactions —	101
3.5.2	Decarboxylative aldol reactions —	102
3.5.3	Peroxidation reactions —	103
3.5.4	Desymmetrization reactions —	104
3.5.5	Oxytrifluoromethylation reactions —	105
3.6	Amino-cinchona urea catalysed reactions —	106
3.6.1	Conjugate addition reactions —	107
3.6.2	Aldol reactions —	110
3.6.3	Nitro-Mannich reaction —	110
3.6.4	Halogenation reactions —	112
3.6.5	Alkylation reactions —	113
3.7	Amino-cinchona thiourea catalysed reactions —	114
3.7.1	Conjugate addition reactions —	115
3.7.2	Mannich reactions —	119
3.7.3	Aza-Henry reactions —	120
3.7.4	Aldol reactions —	120
3.7.5	Diels-Alder Reactions —	122
3.7.6	Oxidation reactions —	123
3.8	Cinchona-based diaminomethylenemalonitrile (DMM) organocatalysts —	124
3.8.1	Conjugate addition reactions —	124
3.8.2	Hydrophosphonylation reactions —	126
3.9	Cinchona-squaramide catalysed asymmetric reactions —	127
3.9.1	Conjugate addition reactions —	128
3.9.2	Mannich reactions —	155
3.9.3	The Rauhut–Currier reaction —	161
3.9.4	1,3-Dipolar cycloadditions —	162

- 3.10 Conclusions, outlook and perspectives — 166
- List of abbreviations — 167
- Notes — 168
- References — 168

Laura Raimondi, Chiara Faverio and Monica Fiorenza Boselli

- 4 Chiral imidazolidinones: A class of privileged organocatalysts in stereoselective organic synthesis — 177**
 - 4.1 Introduction — 177
 - 4.2 Imidazolidinones: Iminium ion activation — 180
 - 4.3 Chiral imidazolidinones: Other activation modes — 183
 - 4.3.1 Stereoselective alkylation of aldehydes — 183
 - 4.3.2 Stereoselective imine reduction — 184
 - 4.4 Immobilized imidazolidinones — 186
 - 4.5 Conclusion and perspectives — 193
 - References — 194

Florenci V. González Adelantado

- 5 Phase-transfer catalysis and the ion pair concept — 197**
 - 5.1 Introduction — 197
 - 5.2 Alkylation — 198
 - 5.2.1 Preparation of amino acids and peptides — 198
 - 5.2.2 Alkylation of oxindoles — 201
 - 5.2.3 Other alkylations — 201
 - 5.3 Conjugate additions — 205
 - 5.4 Fluorinations — 209
 - 5.5 Photoinduced PTC — 211
 - 5.6 Nitro-Mannich reactions — 213
 - 5.7 Preparation of heterocycles — 214
 - 5.7.1 Heterocyclizations — 214
 - 5.7.2 Cycloadditions — 217
 - 5.8 Derivatizations of isoxazoles — 218
 - 5.9 Umpolung conjugate additions of imines — 219
 - 5.10 Other reactions — 220
 - 5.11 Outlook and perspectives — 223
 - References — 223

Elisabetta Massolo and Maurizio Benaglia

- 6 Stereoselective organocascades: from fundamentals to recent developments — 229**
 - 6.1 Introduction — 230
 - 6.1.1 Taxonomy — 230

6.1.2	Reaction sequences — 233
6.2	Double cascade sequences — 234
6.2.1	Michael-type reaction initiated sequences — 235
6.2.2	1,2-Additions initiated sequences — 243
6.2.3	Diels-Alder-type reaction initiated sequences — 245
6.3	Triple cascade sequences — 247
6.3.1	Michael-type reaction initiated sequences — 247
6.3.2	1,2-Additions initiated sequences — 249
6.3.3	Miscellaneous — 251
6.4	Quadruple cascade sequences — 252
6.4.1	Michael-type reaction initiated sequences — 252
6.4.2	1,2-Additions initiated sequences — 254
6.4.3	Miscellaneous — 256
6.5	Conclusions and outlook — 257
	Abbreviations — 258
	References — 258

Manuel Orlandi

7	Basic principles of substrate activation through non-covalent bond interactions — 263
7.1	Introduction — 263
7.2	Chiral Brønsted Acid (CBA) catalysis — 264
7.2.1	H-bond activation and pK_a — 264
7.2.2	Stereoselective reduction of imines — 266
7.2.3	Ring opening reactions — 273
7.2.4	Asymmetric pericyclic reactions — 278
7.2.5	Stereoselective sulfoxidations — 281
7.3	Chiral counter-anion catalysis — 283
7.3.1	Meso-Aziridinium and meso-episulfonium ring opening reactions — 283
7.3.2	Stereoselective fluorination of allylic alcohols — 284
7.3.3	Enantioselective Pummerer reaction — 287
7.4	General considerations — 289
	References — 290

Sara Meninno, Rosaria Villano and Alessandra Lattanzi

8	Recent developments in stereoselective organocatalytic oxyfunctionalizations — 293
8.1	Introduction — 293
8.2	α -Oxygenation of carbonyl compounds — 294
8.2.1	α -Hydroxylation — 294
8.2.2	α -Benzoyloxylation — 301

8.2.3	α -Tosyloxylation — 306
8.3	Dihydroxylation and dioxygenation of alkenes — 308
8.3.1	Dihydroxylation of alkenes — 309
8.3.2	Dioxygenation of alkenes — 311
8.4	BV oxidation and oxidative desymmetrization — 314
8.5	Miscellaneous — 323
8.6	Outlook and perspectives — 325
	References — 326

Andrea Gualandi, Pier Giorgio Cozzi, Giacomo Rodeghiero, Thomas Paul Jansen and Rossana Perciaccante

9	Stereoselective synergistic organo photoredox catalysis with enamines and iminiums — 331
9.1	Introduction — 331
9.2	Photophysical and photochemical properties of organic photoredox catalysis: a guide for dummies — 332
9.3	Stereoselective alkylation of enamines through dual catalysis — 337
9.3.1	Ruthenium stereoselective alkylation of enamines — 337
9.3.2	Organic dyes in stereoselective alkylation of enamines — 339
9.3.3	Use of semiconductors and Earth abundant metals — 341
9.3.4	Iridium complexes in alkylation of enamines — 342
9.3.5	Stereoselective photoredox catalysis and HAT — 344
9.3.6	Stereoselective formation of C–N bonds with photoredox enamine catalysis — 346
9.3.7	Other stereoselective processes with enamine catalysis — 347
9.4	Stereoselective alkylation of enamines through EDA — 348
9.5	Stereoselective alkylation through iminium intermediate and a PC — 351
9.6	Stereoselective alkylation through enamine as the PC — 354
9.7	Stereoselective reactions of iminium ions as the PC — 355
9.8	Outlook and perspectives — 359
	References — 360

Alessandra Puglisi and Sergio Rossi

10	Stereoselective organocatalysis and flow chemistry — 365
10.1	Introduction — 365
10.2	Catalytic flow reactors: classification, tools and parameters — 367
10.3	Homogenous organocatalysis in flow — 370
10.3.1	Continuous-flow organophotoredox transformations — 377
10.4	Solid-supported stereoselective organic catalysts in flow — 379
10.4.1	Packed-bed reactors — 380

10.4.2	Monolithic reactors —	389
10.4.3	Inner wall-functionalized reactors —	392
10.5	Outlook and perspectives —	394
	References —	395

Armando Carlone and Luca Bernardi

11	Enantioselective organocatalytic approaches to active pharmaceutical ingredients – selected industrial examples —	401
11.1	Introduction —	401
11.2	Asymmetric organocatalysis in the industrial synthesis of APIs —	403
11.2.1	Letemovir —	403
11.2.2	Censavudine —	408
11.2.3	Uprifosbuvir —	412
11.2.4	Funapide —	417
11.3	General considerations —	426
11.4	Outlook and perspectives —	429
	References —	429

Index —	435
