

Table of Content

Vorwort.....	VII
Zusammenfassung.....	VIII
Table of Content.....	IX
List of Abbreviations.....	XII
List of Symbols	XIV
1 Introduction	1
1.1 Outset point.....	1
1.2 Objective of the contribution.....	2
1.3 Thesis structure.....	4
2 Challenges in modular product architecture alternative decisions	7
2.1 Research environment	7
2.2 Research questions and research hypothesis	11
3 State of the art.....	17
3.1 Terminology and Taxonomy.....	18
3.2 Development of modular product architectures	20
3.3 Performance assessment of modular product architectures	21
3.4 Modular kits within business processes.....	31
3.5 The Impact Model: analysis of effects and impacts of MPAs	32
3.6 Model-Based Systems-Engineering (MBSE)	33
3.6.1 Fundamentals of Model-Based Systems Engineering	35
3.6.2 Consistency enhancement using MBSE	37
3.6.3 Single-source of truth: MBSE vs. PLM	39
3.6.4 MBSE concepts supporting the development of modular product architectures	41
3.7 Configuration systems	43
3.7.1 Types of configuration systems	44
3.7.2 Approaches to multi-dimensional configuration algorithms	46
3.7.3 The Dijkstra-algorithm as basis for the configuration system ..	48

3.7.4 The Hyperspace as a basis for the geometric configuration algorithm.....	49
3.8 Definition of the considered demand for further research	49
3.8.1 Bibliographic analysis.....	49
3.8.2 Definition of research requirements.....	51
4 Simulation approach for the performance analysis of modular product architectures.....	59
4.1 Overview to the correlation of the simulation and configuration methods	59
4.2 Definition of the Flow Diverter explanation example.....	62
4.3 The configuration system as element of the simulation method	64
4.3.1 MPA data basis structuring.....	66
4.3.2 Modelling of configuration relevant constraints	75
4.3.3 Configuration decision dimensions.....	78
4.3.4 Implementation of the product configuration system	79
4.3.5 MBSE and configuration system data exchange system.....	86
4.3.6 The Configuration Value Vector.....	91
4.3.7 The adapted Dijkstra-algorithm for the determination of valid product variants.....	93
4.3.8 The multi-dimensional Hyperspace calculation algorithm	95
4.4 Modular product architecture performance simulation method	102
4.4.1 Overview to the simulation-based decision-making process	103
4.4.2 The MPA performance assessment simulation	104
4.5 Interim summary of the MPA simulation algorithm	113
5 Validation of the methods	117
5.1 Description of the case study.....	117
5.2 Case Study implementation	120
5.2.1 Configuration implementation for the case study.....	120
5.2.2 Case Study simulation analysis dimensions	136
5.2.3 Simulation data input: customer products	139
5.2.4 Visualization of simulation results	141
5.3 Verification and validation.....	142
5.3.1 Sensitivity analysis	143

5.3.2 Validation	145
5.3.3 Response to the research questions and research hypothesis	149
6 Conclusion and outlook.....	153
7 Annex.....	157
7.1 Annex 1: Bibliographic analysis data	157
7.2 Annex 2: Extended excerpt of CND for Flow Diverter	160
7.3 Annex 3: Four Dependency Matrices for configuration process.....	161
7.4 Annex 4: Flow Diverter configuration system frondend description	162
7.5 Annex 5: Model-Based MPA – configuration system interface data format	163
7.6 Annex 6: Extended Parametric Model for case study – Axis Systems	165
7.7 Annex 7: Case study company Impact Model with relevant analysis dimensions.....	166
7.8 Annex 8: List of all configuration relevant properties for simulation	167
7.9 Annex 9: Excerpt of Dependency Matrices for MPA alternatives.....	168
8 References	169
Curriculum Vitae.....	179
