Preface — V

1 Nielsen Methods — 1

- 1.1 Free Groups and Group Presentations — 1
 - 1.1.1 Residual Finiteness and the Hopfian Property — 8
 - 1.1.2 Counting Processes — 10
 - 1.1.3 Residual Freeness, Properties CT and CSA — 14
- 1.2 The Nielsen Method in Free Groups — 18
 - 1.2.1 Nielsen Transformations and Subgroups of Free Groups — 18
 - 1.2.2 Special Equations in Free Groups — 23
 - 1.2.3 Test Elements, Almost Primitive Elements, and Generic Elements — 29
 - 1.2.4 Vaught Problem and Powers in Free Groups — 34
 - 1.2.5 The Automorphism Group of Free Groups and Stabilizers — 36
- 1.3 Generators and Relators — 41
 - 1.3.1 Examples of Group Presentations — 42
 - 1.3.2 Decision Problems and Tietze Transformations — 49
 - 1.3.3 The Reidemeister-Schreier Method — 54
 - 1.3.4 Hall's Theorem — 63
 - 1.3.5 The Todd-Coxeter Method — 65
- 1.4 Free Products — 74
 - 1.4.1 Examples of Free Products and the Extension Problem — 75
 - 1.4.2 Normal Form, the Nielsen Method in Free Products, and the Theorem of Kurosh — 81
 - 1.4.3 Special Equations in Free Products — 91
 - 1.4.4 The Theorem of Grushko and Applications for Equations in Free Products — 97
- 1.5 Free Products with Amalgamation — 102
 - 1.5.1 The Pushout and First Properties of Free Products with Amalgamation — 102
 - 1.5.2 The Nielsen Method in Free Products with Amalgamation — 108
 - 1.5.3 E-Transformations — 118
 - 1.5.4 Equations in Free Products with Amalgamation — 120
 - 1.5.5 Lyndon Property LZ, Restricted Gromov Groups and Baumslag Doubles — 122
- 1.6 HNN Extensions — 126
 - 1.6.1 Definition and First Properties of HNN Extensions — 127
 - 1.6.2 Embeddings of Groups using HNN Extensions — 133
 - 1.6.3 The Nielsen Method and Equations in HNN Extensions — 140
- 1.7 One-Relator Groups — 148

1.7.1	Magnus's Freiheitssatz and Finite Subgroups of One-Relator Groups —	148
1.7.2	Newman's Spelling Theorem —	153
1.7.3	Normal Closures of Single Elements in Free Groups —	155
1.7.4	The Surface Group Conjecture and Property IF —	156
1.7.5	Torsion-Free Normal Subgroups of Finite Index, the Tits Alternative and Decompositions of One-Relator Groups —	158
1.7.6	RG type, CT, and CSA Properties in One-Relator Groups —	173
2	Covering Spaces —	177
2.1	Fundamental Groups and CW Complexes —	177
2.1.1	Paths, Homotopy Equivalences and Fundamental Groups —	177
2.1.2	Simplicial and CW Complexes —	184
2.1.3	Homotopy Extension Property and Cellular Approximation —	193
2.2	Covering Spaces and the Theorem of Seifert and van Kampen —	195
2.2.1	Covering Maps and Lifting Properties —	195
2.2.2	The Theorem of Seifert and van Kampen —	201
2.3	Universal Coverings, Edge Path Groups and Applications —	208
2.3.1	Surface Groups —	220
2.3.2	Covering Space Proofs of Theorems 1.2.52 and 1.3.23 —	222
2.3.3	Group Amalgam Description of the Fundamental Groups of certain CW Complexes —	223
2.3.4	Topological Proof of the Reidemeister–Schreier Theorem —	224
2.3.5	Covering Space Interpretation of Residual Finiteness —	225
2.3.6	Subgroup Separability —	225
2.3.7	Graphs of Groups —	230
3	Hyperbolic Groups —	233
3.1	Introduction: The Theory of Hyperbolic Groups —	233
3.2	Hyperbolic and Metric Spaces —	238
3.2.1	The Gromov Product in Hyperbolic Metric Spaces and \mathbb{R} -Trees —	238
3.2.2	Approximation by Trees —	244
3.2.3	Equivalent Hyperbolicity Properties for Geodesic Metric Spaces —	255
3.2.4	The Upper Half Plane as a Hyperbolic Metric Space —	262
3.3	Hyperbolic Geodesic Metric Spaces and Hyperbolic Groups —	264
3.3.1	Properly Discontinuous Actions of Groups and Quasi Isometries —	265
3.3.2	Hyperbolic Groups and Proper Actions on some Hyperbolic Space —	271
3.4	First Properties of Hyperbolic Groups —	274
3.4.1	The Rips Complex for a Hyperbolic Group —	275
3.4.2	The Dehn Algorithm and Applications —	282
3.4.3	Linear Isoperimetric Inequalities —	285

3.5	Examples of Hyperbolic Groups —	288
3.5.1	Surface Groups —	289
3.5.2	Groups with Sufficiently High-Powered Relators —	290
3.5.3	Baumslag–Solitar Groups —	291
3.5.4	Groups of F-Type —	292
3.6	Interlude: Marshall Hall’s Theorem and Property S —	306
3.7	Quasi Isometries and Quasi Geodesics —	316
3.7.1	Quasi Geodesics, Quasi Rays and Quasi Segments —	316
3.7.2	Independence of the Choice of Finite Generating Systems —	330
3.8	The Boundary of a Tree —	335
3.8.1	Equivalent Rays in a Metric Tree and its Boundary —	335
3.8.2	Lipschitz and Hölder Homeomorphisms —	339
3.8.3	Applications to Groups —	347
3.9	The Boundary of a Hyperbolic Space —	351
3.10	Automatic and Parafree Groups —	364

	Bibliography —	369
--	----------------	-----

	Index —	379
