

Table of contents

List of figures	xiii
List of tables	xvii
1 Motivation	1
1.1 Challenges for automotive drivetrain electrification	1
1.2 Thermal management as an essential design factor for high power density traction machines	2
1.3 Thesis objectives and outline	3
2 Surrogate based optimization of e-machine's thermal management	7
2.1 Surrogate based thermal optimization approach	7
2.2 Modeling surrogates	10
2.2.1 Functional principle	10
2.2.2 Design of Experiments	11
2.2.3 Surrogate modeling techniques	14
2.3 Multi-objective optimization	18
2.3.1 Problem definition	18
2.3.2 MOO methods	19
2.3.3 Multi-objective genetic algorithm	20
2.4 State of the art automotive electric machine thermal management	23
2.4.1 Heat transfer mechanism	23
2.4.2 Boundary conditions in electric vehicles	29

2.4.3	Thermal management techniques of electric machine	31
3	Conception approach for electric machine thermal solutions	37
3.1	Boundary condition and constraints	38
3.2	Generation of innovative thermal solutions	40
3.2.1	Functional structure of electric drivetrain	40
3.2.2	Morphological design analysis	42
3.2.3	Alternative thermal solutions	46
3.3	Conception by analytic hierarchy process	51
3.3.1	Evaluation criteria structure	51
3.3.2	Analytic Hierarchy Process based weighting system	53
3.3.3	Knock-out criterion	59
3.4	Selection of innovative thermal concept	59
3.4.1	Evaluation of thermal concepts	59
3.4.2	Slot sealing in the direct coil cooling concept	61
4	Modeling of electric machines by direct coil cooling	65
4.1	Description of direct coil cooling concept	65
4.2	Modeling approach of direct coil cooled machines	69
4.3	Detailed coil cooling channel model	72
4.3.1	Computational domain and boundary condition	72
4.3.2	Governing equations	73
4.3.3	Equivalent channel geometry	74
4.3.4	Mesh and grid independence	78
4.3.5	Heat transfer behavior	82
4.4	Modeling of fluid distribution in electric machines	87
4.4.1	Type of flow distribution system	87
4.4.2	Stator coolant distribution network	89
4.4.3	Governing equations	90
4.4.4	Chebyshev polynomial approach	91

4.5	Model of direct coil cooled electric machines	94
4.5.1	Segment model of electric machines	94
4.5.2	Governing equations	96
4.5.3	Homogenization of coil	97
5	Thermal design optimization of the direct coil cooled machines	103
5.1	Design objectives, variables and constraints	103
5.2	Optimization of coolant distribution	104
5.3	Surrogate model of coil cooling channel	107
5.3.1	Design points for high-fidelity simulation	107
5.3.2	Modeling surrogates	109
5.3.3	Surrogate quality	110
5.3.4	Behavior of coil cooling channel model	115
5.4	Optimization results of direct coil cooling	117
5.4.1	Surrogate supported nsGA-II optimization	117
5.4.2	Sensitivity of design variables	120
6	Evaluation of drivetrain system integration	123
6.1	Thermal integration of direct coil cooled machines	123
6.1.1	Topologies of common drivetrain oil circuit	123
6.1.2	Driving cycle and operating condition	125
6.2	Thermal modeling approach of drivetrain system	127
6.2.1	System model of direct coil cooled e-machine	127
6.2.2	Modeling of power losses in gearbox	132
6.2.3	System model of power inverter	133
6.2.4	Modeling heat transfer of drivetrain housing	135
6.3	Results and discussions of drive cycle behavior	137
6.3.1	Efficiency issue under low environmental temperature	137
6.3.2	Thermal performance under high environmental temperature	139

7 Experimental demonstration of the direct coil cooled machine 145

7.1 Evaluation of coil cooling channel performance 145

7.1.1 Setup of coil cooling channel test plate 145

7.1.2 Experimental results of coil test plate 148

7.2 Evaluation of stator sealing behavior 151

7.2.1 Test setup for leakage evaluation 151

7.2.2 Experimental results of oil leakage 153

7.3 Evaluation of direct coil cooled e-machine 156

7.3.1 Test setup of prototype SR machine 156

7.3.2 Evaluation of hydrodynamic behavior 159

7.3.3 Evaluation of thermal performance 159

7.3.4 Continuous performance of the prototype machine 164

7.3.5 Comparison of direct coil cooling against literature 166

8 Conclusions and outlook 169

8.1 Summary of the work 169

8.2 Future research directions 172

Bibliography 175
