Preface *xi*

1	Halogen Bonding: An Introduction	1
	<i>Daniel A. Decato, Eric A. John and Orion B. Berryman</i>	
1.1	Introduction	1
1.1.1	The Halogen Bond: Definition, Characteristics, Representations, and Parallels to the Hydrogen Bond	2
1.1.2	Parallels to the Hydrogen Bond	3
1.1.3	Notation and Terminology	4
1.1.4	Solid-state Halogen Bond Contacts	4
1.1.5	Halogen Bond Features	5
1.1.6	Additional Nomenclature	6
1.2	Historical Perspective	6
1.2.1	Rediscovery	10
1.3	Crystallographic Studies	11
1.3.1	CSD Evaluations	12
1.3.2	Fundamental Studies and Halogen Bond–Hydrogen Bond Interplay	13
1.3.3	Metal Complexes and Charge-assisted Halogen Bonding Systems	17
1.3.4	Alternative Motifs and Solid-state Reactivity	19
1.3.5	Crystallographic Studies Conclusion	20
1.4	Computational Studies	21
1.4.1	Introduction	21
1.4.2	Electrostatics of the Halogen Bond and the σ -Hole	21
1.4.3	Limitations on Electrostatic Potential	24
1.4.4	Atomic Orbital Theory and the σ -Hole	24
1.4.5	Charge Transfer	24
1.4.6	Dispersion and Polarization Component	25
1.4.7	Decomposition	26
1.4.8	Biological Computation of Halogen Bonding	26
1.4.9	Computational Conclusion	27
1.5	Materials	28
1.5.1	Introduction	28
1.5.2	Liquid Crystals	28

1.5.3	Supramolecular Polymers	29
1.5.3.1	LC Polymers	29
1.5.3.2	Light-sensitive Polymers	30
1.5.3.3	Block Polymers	30
1.5.3.4	Self-healing Polymers	31
1.5.4	Supramolecular Gels	31
1.5.5	Materials Conclusion	33
1.6	Conclusion	33
	Acknowledgments	34
	References	34

2 Thermodynamics of Halogen Bonding in Solution 43

Mark S. Taylor

2.1	Introduction	43
2.2	Molecular Halogens and Interhalogens	44
2.2.1	Uncharged Lewis Bases	44
2.3	<i>N</i> -Halo and <i>N</i> -Halonium Compounds	46
2.4	Haloalkynes	47
2.4.1	Uncharged Lewis Bases	47
2.5	Haloarenes	51
2.5.1	Uncharged Lewis Bases	51
2.5.2	Anionic Lewis Bases	58
2.6	Halogenated Heterocycles	61
2.6.1	Uncharged Lewis Bases	62
2.6.2	Anionic Lewis Bases	64
2.7	Haloalkanes and Haloalkenes	67
2.7.1	Uncharged Lewis Bases	67
2.7.2	Anionic Lewis Bases	71
2.8	Summary and Outlook	72
	References	73

3 Recognition with Macrocycles and Interlocked Systems 83

Andrew Docker and Paul D. Beer

3.1	Introduction	83
3.2	Recognition by XB Macrocyclic Hosts	86
3.3	XB Interlocked Hosts for Recognition and Sensing	87
3.3.1	XB-Anion Templatation of Interlocked Molecules	90
3.3.2	[2]Rotaxane Hosts for Anion Recognition	92
3.3.3	[2]Catenanes for Anion Recognition	97
3.3.4	XB Interlocked Hosts Constructed via Active Metal Template Methodology	100
3.3.5	Interlocked Host Molecules for Sensing Applications	107
3.4	Foldamer Architectures for Recognition	113
3.5	Summary and Conclusions	117
	References	118

4	The Three-Center Halogen Bond	121
	<i>Lotta Turunen and Máté Erdélyi</i>	
4.1	Introduction	121
4.2	Three-Center Halogen Bond	122
4.2.1	Features of the Three-Center Halogen Bond	123
4.2.1.1	Symmetry and Dynamics of the Three-Center Halogen Bonds	123
4.2.1.2	The Influence of the Identity of Halonium Ions	126
4.2.1.3	The Influence of Lewis Basicity	128
4.2.1.4	The Influence of Solvent and Counterions	131
4.2.2	The Three-Center Halogen Bond of <i>N</i> -Halosuccinimides and <i>N</i> -Halosaccharins	132
4.2.3	Trihalide Ions	134
4.2.4	Stability of the Three-Center Halogen Bond	135
4.3	Synthetic Applications	137
4.3.1	Halonium Transfer Reactions	137
4.3.2	Oxidation Reactions	140
4.3.3	Enantioselective Halogenations	141
4.4	Three-Center Halogen Bonds in Supramolecular Chemistry	143
4.5	Summary and Conclusions	147
	References	148
5	Spectroscopy of Halogen Bonding in Solution	153
	<i>Scott Wilcox, Wouter Herrebout and Mate Erdelyi</i>	
5.1	Introduction	153
5.2	Vibrational Spectroscopy	154
5.3	UV-vis Spectroscopy	158
5.4	NMR Spectroscopy	160
5.4.1	Solvent Effects	161
5.4.2	Entropic Effects on Halogen Bonding	165
5.4.3	NMR Titration Studies	168
5.4.3.1	Direct Detection Techniques	169
5.4.3.2	Indirect Detection Techniques	176
5.4.4	Nuclear Overhauser Effect (NOE) NMR Spectroscopy	178
5.4.4.1	Homonuclear NOE Spectroscopy	178
5.4.4.2	Heteronuclear NOE Spectroscopy	181
5.4.5	Diffusion NMR	182
5.4.6	The Isotopic Perturbation of Equilibrium Method	184
5.5	ESR Spectroscopy	185
5.6	Summary and Conclusions	187
	Acknowledgments	189
	References	189
6	Anion Transport in Lipid Bilayer Membranes Using Halogen Bonds	195
	<i>Andreas Vargas Jentzsch and Stefan Matile</i>	
6.1	Introduction	195

6.1.1	Halogen Bonding in the Context of Ion Transport	196
6.1.2	Organization of This Chapter	198
6.2	Macrocyclic Systems	198
6.2.1	Calix[4]arenes	198
6.2.1.1	Synthesis	199
6.2.1.2	Ion Transport	199
6.2.2	Oxacalix[2]arene[2]triazine	203
6.2.2.1	Synthesis	203
6.2.2.2	Anion Binding Studies	203
6.2.2.3	Crystallographic Studies	203
6.2.2.4	Ion Transport	204
6.2.2.5	Anticancer Activity	205
6.3	Small Molecules	209
6.3.1	Iodoperfluoroarenes	209
6.3.2	Iodoperfluoroalkanes	210
6.3.3	Conductance Experiments in Planar Lipid Bilayers with Small Molecules	215
6.3.4	Elucidating the Mechanism of Transport with Small Molecules	216
6.3.4.1	Membrane Composition in the HPTS Assay	216
6.3.4.2	Hill Coefficients	217
6.3.4.3	Molecular Modeling: DFT Calculations	217
6.3.4.4	Crystal Structures	218
6.4	Halogen Bonding Ion Channels	218
6.4.1	Halogen Bonding Cascades	219
6.4.1.1	Synthesis	219
6.4.1.2	Ion Transport	219
6.4.2	Halogen Bonding Self-Assembled Pores and Channels	222
6.4.2.1	Synthesis	222
6.4.2.2	Ion Transport	223
6.4.2.3	Conductance Experiments in Planar Lipid Bilayers	225
6.4.2.4	Molecular Dynamics Simulations	225
6.4.2.5	Anticancer Activity	225
6.5	Discussion and Perspectives	225
6.6	Summary	227
	Acknowledgments	229
	References	229
7	Catalysis by Molecular Iodine	233
	<i>Jonas J. Koenig and Martin Breugst</i>	
7.1	Introduction	233
7.2	Proposed Activation Mechanisms	234
7.2.1	Halogen-Bond Catalysis	235
7.2.2	Iodonium-Ion Catalysis	236
7.2.3	Brønsted-Acid Catalysis	238
7.3	Applications in Catalysis	239

7.3.1	Scope and Aim	239
7.3.2	Michael Additions	239
7.3.3	Knoevenagel Condensations	242
7.3.4	Cycloadditions and Related Reactions	243
7.3.5	Nazarov-type Reactions	247
7.3.6	Esterifications and Transesterifications	249
7.3.7	Acetalizations and Related Reactions	252
7.3.8	Etherification	254
7.3.9	Friedel–Crafts Alkylations and Arylations	255
7.3.10	Isomerization of Double Bonds	257
7.3.11	Polymerization	259
7.3.12	Cascade Reactions	259
7.4	Summary and Conclusions	263
	References	263
8	Halogen Bonding in Organocatalysis	269
	<i>Revannath L. Sutar</i>	
8.1	Introduction	269
8.2	Organic Reactions Involving XB as Primary Interaction	270
8.2.1	Activation of Halocarbons	272
8.2.2	Activation of Organic Functional Groups	279
8.2.3	XB Organocatalysis Through π -Activation	289
8.2.4	Asymmetric Catalysis Through Halogen Bonding	292
8.3	Reactions Involving XB as Secondary Interaction	297
8.4	Conclusion	301
	References	301
