Preface ix

1	Electromagnetic Interference and Shielding	1
1.1	Introduction	1
1.2	Electromagnetic Field Sources and Impact on Human Beings	2
1.2.1	Natural Sources	3
1.2.2	Artificial (Manmade) Sources	3
1.2.3	Effects on Human Health	4
1.3	EMI Hazards for Data Security	5
1.4	Economic Aspects and the Global Market for EMI Shielding	6
1.5	Electromagnetic Compatibility Regulations and Standards	6
1.5.1	International Standards	8
1.5.2	FCC Standards (United States)	9
1.5.3	European Standards	9
1.5.4	Korean Standards	9
1.5.5	Military or Defense Standards	10
1.6	Materials for EMI Shielding	10
1.7	Summary	14
	References	15
2	EMI Shielding Mechanism and Conversion Techniques	25
2.1	Introduction	25
2.2	EMI Shielding Mechanisms	25
2.2.1	Shielding Effectiveness (SE)	26
2.2.2	SE/t, SSE, and SSE/t for Lightweight Shielding Materials with Minimal Thicknesses	29
2.2.3	Impact of Different Parameters on Electromagnetic Shielding Effectiveness	29
2.2.3.1	Distance of Shield from the Source	30
2.2.3.2	Frequency of the Incident Electromagnetic Field	30
2.2.3.3	Electrical Conductivity or Sheet Resistance	30
2.2.3.4	Thickness of Shield	31
2.2.3.5	Dielectric Losses	31

2.2.3.6	Magnetic Losses	32
2.3	Microwave Absorption Mechanisms	33
2.4	Scattering Parameter Conversion Method for Calculation of Permeability and Permittivity	35
2.4.1	Transmission/Reflection Method	35
2.4.2	Nicolson–Ross–Weir (NRW) Method	38
2.4.3	NIST Iterative Conversion Method	40
2.4.4	New Non-iterative Conversion Method	41
2.4.5	Short-Circuit Line (SCL) Method	43
2.5	Summary	46
	References	47

3 Measurements and Standards 49

3.1	Introduction	49
3.2	EMI Shielding Effectiveness (SE) Measurements	49
3.2.1	Coaxial Transverse Electromagnetic (TEM) Cell Methods	50
3.2.1.1	Coaxial Transmission Line Method	50
3.2.2	Methods Using Antennas or Electric/Magnetic Field Probes	50
3.2.2.1	Open-Ended Coaxial Probe Method	50
3.2.2.2	Shielded Box Method	51
3.2.2.3	Shielded Room Method	51
3.2.2.4	Open-Field or Free Space Method	52
3.3	SE Measurement Systems and Standards	53
3.3.1	SE Calculations Using Experimental Scattering Parameters	53
3.4	Methods and Standards	55
3.4.1	Coaxial TEM Cell Methods	55
3.4.1.1	ASTM ES7-83 Method	56
3.4.1.2	ASTM D4935 Method	57
3.4.1.3	TEM-t Cell Method	58
3.4.1.4	Dual TEM Cell Method	59
3.4.1.5	Split TEM Cell	59
3.4.1.6	Apertured TEM Cell in a Reverberating Chamber	60
3.4.2	Rectangular Waveguide Method	60
3.4.3	Methods Using Antennas or Electric/Magnetic Field Probes	61
3.4.3.1	Testing Methods Based on MIL-STD-285	61
3.4.3.2	Modified Radiation Method Based on MIL-G-83528	62
3.4.3.3	Dual Mode-Stirred Chamber	63
3.4.3.4	IEEE-STD-299	64
3.4.3.5	Free Space Methods	64
3.5	Summary	66
	References	67

4 Graphene and Its Derivative for EMI Shielding 69

4.1	Introduction	69
4.2	Graphene for EMI Shielding	72

4.2.1	CVD-Grown Graphene Films with Transparency	72
4.2.2	Graphene Laminate Films	79
4.2.3	Graphene–Polymer Composites	85
4.2.4	Heteroatom-Doped Graphene	94
4.2.5	Graphene Hybrids with Other Carbon Materials	100
4.3	Graphene as a Microwave Absorber	105
4.4	Summary	116
	References	118
5	MXenes as EMI Shielding Materials	125
5.1	Introduction	125
5.2	MXenes for EMI Shielding	131
5.2.1	MXene Laminate Films	132
5.2.2	Fiber-Reinforced and Polymeric Composites of MXenes	140
5.2.3	MXene Hybrids with Other Nanomaterials	144
5.2.4	Layer-by-Layer (LbL) Assembly in MXene Composites	146
5.2.5	Porous Structures of MXenes	149
5.2.6	Segregated Structures of MXenes with Polymers	156
5.3	MXenes as Microwave Absorbers	157
5.4	Summary	165
	References	166
6	Other 2D Materials	177
6.1	Introduction	177
6.2	2D Materials Beyond Graphene and MXenes	177
6.2.1	Molybdenum Disulfide (MoS_2)	177
6.2.2	Tungsten Disulfide (WS_2)	184
6.2.3	Tantalum Disulfide (TaS_2)	187
6.2.4	Hexagonal Boron Nitride (h-BN)	189
6.2.5	Black Phosphorus (BP)	191
6.2.6	Copper Sulfide (CuS)	191
6.2.7	Metal–Organic Frameworks (MOFs)	194
6.3	Summary	196
	References	197
7	Conclusion and Perspectives	201
	Index	203
