Preface V

Editor VI

Contributors VII

Abbreviations IX

## Chapter 1 – Understanding caries 1

Christian H. Splieth, Mhd Said Mourad, Mohammad Alkilzy, Julian Schmoeckel,  
Ruth M. Santamaría

Caries epidemiology and its consequences

Early childhood caries 4

Caries diagnostics 6

Clinical examination 6

Caries activity 7

Further diagnostics 8

Current concepts and treatment approaches in caries management 8

References 10

## Chapter 2 – Understanding periodontitis 13

Daniela Hoedke, Henrik Dommisch

Epidemiology 13

Etiopathogenesis of periodontitis 14

Periodontitis in relation to systemic diseases 16

Clinical features and diagnosis 18

Prevention and therapy of periodontal diseases 26

Oral hygiene 28

Preventive and therapeutic aspects in relation to general health 30

References 33

## Chapter 3 – Fluoride: How much is needed? 39

Livia M.A. Tenuta, Line Staun Larsen, Branca Heloisa Oliveira, Ana Paula P. Santos,  
Carlos González-Cabezas

Fluoride: the mode of action and why it is needed 40

Fluoride toothpaste: how much fluoride is enough? 42

Professional fluoride use: mechanism and evidence 47

Using as much fluoride as needed 50

References 51

## Contents

### **Chapter 4 – Nutrition and caries: Sugar is the enemy, but what solutions are offered by preventive dentistry? 53**

Cor van Loveren

- Shape of the dose-response association between sugar intake and caries 54
- Influence of fluoridated toothpaste 55
- Frequency or amount of sugar 56
- Reduction of sugar content in products 57
- Selective taxation for unhealthy and healthy products 58
- Personal advice 59
- References 60

### **Chapter 5 – Healthy life, healthy mouth? Interdisciplinary and common risk factor interventions 63**

Denise Duijster, J. H. (Erik) Vermaire

- Determinants of childhood dental caries 64
- The rationale for the Common Risk Factor Approach and interdisciplinary action 64
- Interventions using interdisciplinary partnerships for the prevention of dental caries 66
- Integrated interventions to prevent childhood dental caries and obesity 69
- Integrated interventions to prevent childhood dental caries- and hygiene-related diseases 72
- References 73

### **Chapter 6 – Oral hygiene: The best route to a healthy mouth? 77**

Elena Figuero, Irene Dige, Vita Mačiulskienė

- Definition of the dental biofilm 77
- Nature of the dental biofilm 78
- How to interfere with the dental biofilm 79
- Clinical effect of biofilm control on dental caries 80
- The role of fluoride 81
- The effect of supervised versus individually performed tooth cleaning 82
- Clinical effect of biofilm removal on periodontal and peri-implant diseases 83
- Self-performed mechanical biofilm control 83
- Chemical biofilm control 86
- References 87

### **Chapter 7 – Interdental oral hygiene: To floss, or not to floss? 89**

Falk Schwendicke, Christian H. Splieth

- The evidence for flossing 90
- The evidence for interdental brushes 91
- Clinical considerations 91
- References 93

## **Chapter 8 – Tooth brushing: Myth and science 95**

Stefan Zimmer

- Classic criteria of a manual toothbrush 95
- Production of toothbrushes 96
- Evidence-based criteria for manual toothbrushes 97
- Manual toothbrushes for children 100
- Tooth brushing technique 100
- Tooth brushing time 101
- References 102

## **Chapter 9 – Guidance for healthy dental and oral behavior: Multilevel prevention of early childhood caries 103**

Julian Schmoeckel

- How do we learn: different theories 104
- Ethical considerations in modern patient-doctor relationships 106
- Health literacy and belief in self-efficacy 107
- Evidence of different aspects in counseling for preventing ECC 108
- Access to children: prevention on individual, group, and collective level 112
- References 115

## **Chapter 10 – Fissure sealing: Still to be recommended? 119**

Kim R. Ekstrand, Azam Bakshandeh, Christian H. Splieth

- Caries progression on occlusal surfaces 120
- Preventive and therapeutically placed fissure sealants 123
- Effectiveness of fissure sealants 124
- Clinical application 126
- From science to clinical recommendations 128
- References 129

## **Chapter 11 – Prebiotics, probiotics, and synbiotics: A revolution in preventive dentistry? 131**

Svante Twetman, Jukka H. Meurman, Egija Zaura

- Oral prebiotics 132
- Oral probiotics 134
- Oral synbiotics 138
- References 138

## **Contents**

### **Chapter 12 – Silver fluorides: The new magic bullet? 141**

Mohamed H. Abudrya, Christian H. Splieth, Ruth M. Santamaría

- Historical background 141
- Composition 141
- Mechanism of action 143
- Indications 143
- Contraindications and side effects 144
- Clinical application 145
- Existing evidence 145
- References 147

### **Chapter 13 – Self-assembling peptides: A perfectly engineered preventive and therapeutic tool? 149**

Mohammad Alkilzy, Christian H. Splieth

- Self-assembling peptide P11-4 150
- In vitro studies 151
- In vivo and clinical studies 152
- Clinical application of P11-4 for treatment of initial caries 154
- Further clinical implications of SAP 154
- References 156

### **Chapter 14 – Nonrestorative cavity control: Can nonoperative “preventive” treatment replace restorations? 159**

Ruth M. Santamaría, Nicola Innes

- What is nonrestorative cavity control? 159
- Natural history of dental caries 160
- Prevention as a desirable approach to managing dental caries 160
- Historical management of caries lesions 161
- Is restorative management always necessary or possible? 162
- How to carry out NRCC 162
- What is the aim of NRCC? 163
- For which patients is NRCC indicated? 163
- NRCC technique 164
- What are the main advantages of NRCC? 165
- What are the main disadvantages of NRCC? 166
- Is taking an NRCC approach cost-effective? 167
- Is taking an NRCC approach clinically effective? 167
- References 169

## **Chapter 15 – Prevention and prophylaxis in orthodontics: Neglected opportunities for successful prevention 171**

Karl-Friedrich Krey, Anja Ratzmann, Nadezhda Stancheva

- Etiology of malocclusion and malfunction as the basis of prevention 171
- Form follows function 172
- The beginning of orthodontic prevention 173
- Breastfeeding, swallowing, and chewing 173
- Habits and malfunctions 174
- Playing musical instruments 175
- Premature loss of primary molars and space maintainers 175
- Canine retention 176
- Unilateral reverse articulation 177
- Anterior reverse articulation and periodontal health 177
- Caries 177
- Sleep disorders and upper airway management 177
- Trauma prevention 179
- Temporomandibular disorders 179
- Third molar removal as prevention of crowding 180
- Orofacial clefts 180
- References 182

## **Chapter 16 – Prevention in elderly and medically compromised patients 185**

Murali Srinivasan

- Demographics of aging: related effects and retention of natural teeth 185
- Periodontal disease and root caries 187
- Prevention of periodontal disease 187
- Prevention of root caries 189
- References 192

## **Chapter 17 – Caries risk or activity: Which should we assess? 195**

Margherita Fontana, Ruth M. Santamaría

- Caries risk assessment 196
- Caries activity 199
- References 204
