Contents

1 Introduction — 1

1.1 Two-Dimensional versus Three-Dimensional Structures — 1
1.1.1 Two-Dimensional Structures in Early History of Organic Chemistry — 1
1.1.2 Three-Dimensional Structures After Beginning of Stereochemistry — 2
1.1.3 Arbitrary Switching Between 2D-Based and 3D-Based Concepts — 4
1.2 Problematic Methodology for Categorizing Isomers and Stereoisomers — 6
1.2.1 Same or Different — 6
1.2.2 Dual Definition of Isomers — 7
1.2.3 Positional Isomers as a Kind of Constitutional Isomers — 11
1.3 Problematic Methodology for Categorizing Enantiomers and Diastereomers — 12
1.3.1 Enantiomers — 12
1.3.2 Diastereomers — 12
1.3.3 Chirality and Stereogenicity — 18
1.4 Total Misleading Features of the Traditional Terminology on Isomers — 19
1.4.1 Total Misleading Flowcharts — 19
1.4.2 Another Flowchart With Partial Solutions — 20
1.4.3 More Promising Way — 22
1.5 Isomer Numbers — 23
1.5.1 Combinatorial Enumeration as 2D Structures — 23
1.5.2 Importance of the Proligand-Promolecule Model — 24
1.5.3 Combinatorial Enumeration as 3D Structures — 24
1.6 Stereoisograms — 25
1.6.1 Stereoisograms as Diagrammatic Expressions of *RS*-Stereoisomeric Groups — 25
1.6.2 Theoretical Foundations and Group Hierarchy — 27
1.6.3 Avoidance of Misleading Standpoints of *R/S*-Stereodescriptors — 27
1.6.4 Avoidance of Misleading Standpoints of *pro-R/pro-S*-Descriptors — 28
1.6.5 Global Symmetries and Local Symmetries — 28
1.6.6 Enumeration under *RS*-Stereoisomeric Groups — 32
1.7 Aims of Mathematical Stereochemistry — 32

2 Classification of Isomers — 38

2.1 Equivalence Relationships of Various Levels of Isomerism — 38
2.1.1 Equivalence Relationships and Equivalence Classes — 38
2.1.2 Enantiomers, Stereoisomers, and Isomers — 39

Bibliografische Informationen
http://d-nb.info/123156217X

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.1.3 Inequivalence Relationships — 43
2.1.4 Isoskeletomers as a Missing Link for Consistent Terminology — 46
2.1.5 Constitutionally-Anisomeric Relationships vs. Constitutionally-Isomeric Relationships — 49
2.2 Revised Flowchart for Categorizing Isomers — 50
2.2.1 Design of a Revised Flowchart for Categorizing Isomers — 50
2.2.2 Illustrative Examples — 51
2.2.3 Restriction of the Domain of Isomerism — 53
2.2.4 Harmonization of 3D-Based Concepts with 2D-Based Concepts — 54

3 Point-Group Symmetry — 58
3.1 Stereoskeletons and the Proligand-Promolecule Model — 58
3.1.1 Configuration and Conformation — 58
3.1.2 The Proligand-Promolecule Model Based on Stereoskeletons — 59
3.2 Point Groups for Characterizing Geometric Symmetry of Molecular Entity — 61
3.2.1 Symmetry Axes and Symmetry Operations — 61
3.2.2 Construction of Point Groups — 64
3.2.3 Subgroups of a Point Group — 66
3.2.4 Maximum Chiral Subgroup of a Point Group — 68
3.2.5 Global and Local Point-Group Symmetries — 69
3.3 Point-Group Symmetries of Various Stereoskeletons — 73
3.3.1 Stereoskeletons of Ligancy 4 — 74
3.3.2 Stereoskeletons of Ligancy 6 — 79
3.3.3 Stereoskeletons of Ligancy 8 — 80
3.3.4 Stereoskeletons Having Two or More Orbits — 81
3.4 Point-Group Symmetries of (Pro)molecules — 84
3.4.1 Derivation of Molecules from a Stereoskeleton via Promolecules — 84
3.4.2 Orbits in Molecules and Promolecules Derived from Stereoskeletons — 85
3.4.3 The SCR Notation — 90
3.4.4 Site Symmetries vs. Coset Representations for Symmetry Notations — 91

4 Sphericities of Orbits and Prochirality — 96
4.1 Sphericities of Orbits — 96
4.1.1 Orbits of Equivalent Proligands — 96
4.1.2 Three Kinds of Sphericities — 98
4.1.3 Chirality Fittingness for Three Modes of Accommodation — 98
4.2 Prochirality — 102
4.2.1 Confusion on the Term 'Prochirality' — 102
4.2.2 Prochirality as a Geometric Concept — 104

4.2.3 Enantiospheric Orbits vs. Enantiotopic Relationships — 107
4.2.4 Chirogenic Sites in an Enantiospheric Orbit — 111
4.2.5 Prochirality Concerning Chiral Proligands in Isolation — 116
4.2.6 Global Prochirality and Local Prochirality — 119

5 Foundations of Enumeration Under Point Groups — 125
5.1 Orbits Governed by Coset Representations — 125
5.1.1 Coset Representations — 125
5.1.2 Mark Tables — 128
5.1.3 Multiplicities of Orbits — 130
5.2 Subduction of Coset Representations — 133
5.2.1 Subduced Representations — 133
5.2.2 Unit Subduced Cylce Indices (USCIs) — 138

6 Symmetry-Itemized Enumeration Under Point Groups — 143
6.1 Fujita's USCI Approach — 143
6.1.1 USCI-CFs for Itemized Enumeration — 144
6.1.2 Subduced Cycle Indices for Itemized Enumeration — 151
6.2 The FPM Method of Fujita's USCI Approach — 152
6.2.1 Fixed-Point Vectors (FPVs) and Multiplicity Vectors (MVs) — 152
6.2.2 Fixed-Point Matrices (FPMs) and Isomer-Counting Matrices (ICMs) — 154
6.2.3 Practices of the FPM Method — 156
6.3 The PCI Method of Fujita's USCI Approach — 162
6.3.1 Partial Cycle Indices With Chirality Fittingness (PCI-CFs) — 162
6.3.2 Partial Cycle Indices Without Chirality Fittingness (PCIs) — 163
6.3.3 Practices of the PCI Method — 164
6.4 Other Methods of Fujita's USCI Approach — 178
6.4.1 The Elementary-Superposition Method — 178
6.4.2 The Partial-Superposition Method — 178
6.5 Applications of Fujita's USCI Approach — 178
6.5.1 Enumeration of Flexible Molecules — 178
6.5.2 Enumeration of Molecules Interesting Stereochemically — 179
6.5.3 Enumeration of Inorganic Complexes — 182
6.5.4 Enumeration of Organic Reactions — 183

7 Gross Enumeration Under Point Groups — 186
7.1 Counting Orbits — 186
7.2 Pólya's Theorem of Counting — 187
7.3 Fujita's Proligand Method of Counting — 190
7.3.1 Sphericities of Cycles — 191
7.3.2 Products of Sphericity Indices — 193

7.3.3 Practices of Fujita's Proligand Method — 196
7.3.4 Enumeration of Achiral and Chiral Promolecules — 200

8 Enumeration of Alkanes as 3D Structures — 206
8.1 Surveys With Historical Comments — 206
8.2 Enumeration of Alkyl Ligands as 3D Planted Trees — 208
8.2.1 Enumeration of Methyl Proligands as Planted Promolecules — 208
8.2.2 Recursive Enumeration of Alkyl ligands as Planted Promolecules — 213
8.2.3 Functional Equations for Recursive Enumeration of Alkyl ligands — 216
8.2.4 Achiral Alkyl Ligands and Pairs of Enantiomeric Alkyl Ligands — 220
8.3 Enumeration of Alkyl Ligands as Planted Trees — 221
8.3.1 Alkyl Ligands or Monosubstituted Alkanes as Graphs — 221
8.3.2 3D Structures vs. Graphs for Characterizing Alkyl Ligands or Monosubstituted Alkanes — 224
8.4 Enumeration of Alkanes (3D-Trees) as 3D-Structural Isomers — 226
8.4.1 Alkanes as Centroidal and Bicentroidal 3D-Trees — 226
8.4.2 Enumeration of Centroidal Alkanes (3D-Trees) as 3D-Structural Isomers — 227
8.4.3 Enumeration of Bicentroidal Alkanes (3D-Trees) as 3D-Structural Isomers — 231
8.4.4 Total Enumeration of Alkanes as 3D-Trees — 236
8.5 Enumeration of Alkanes (3D-Trees) as Steric Isomers — 239
8.5.1 Centroidal Alkanes (3D-Trees) as Steric Isomers — 239
8.5.2 Bicentroidal Alkanes (3D-Trees) as Steric Isomers — 239
8.5.3 Total Enumeration of Alkanes (3D-Trees) as Steric Isomers — 241
8.6 Enumeration of Alkanes (Trees) as Graphs or Constitutional Isomers — 242
8.6.1 Alkanes as Centroidal and Bicentroidal Trees — 242
8.6.2 Enumeration of Centroidal Alkanes (Trees) as Constitutional Isomers — 242
8.6.3 Enumeration of Bicentroidal Alkanes (Trees) as Constitutional Isomers — 245
8.6.4 Total Enumeration of Alkanes (Trees) as Graphs or Constitutional Isomers — 246

9 Permutation-Group Symmetry — 248
9.1 Historical Comments — 248
9.2 Permutation Groups — 250
9.2.1 Permutation Groups as Subgroups of Symmetric Groups — 250
9.2.2 Permutations vs. Reflections — 251
9.3 *RS*-Permutation Groups — 254
9.3.1 *RS*-Permutations and *RS*-Diastereomeric Relationships — 254

9.3.2 *RS*-Permutation Groups vs. Point Groups — 255
9.3.3 Formulation of *RS*-Permutation Groups — 259
9.3.4 Action of *RS*-Permutation Groups — 261
9.3.5 Misleading Features of the Conventional Terminology — 263
9.4 *RS*-Permutation Groups for Skeletons of Ligancy 4 — 269
9.4.1 *RS*-Permutation Group for a Tetrahedral Skeleton — 269
9.4.2 *RS*-Permutation Group for an Allene Skeleton — 279
9.4.3 *RS*-Permutation Group for an Ethylene Skeleton — 283

10 Stereoisograms and *RS*-Stereoisomers — 292
10.1 Stereoisograms as Integrated Diagrammatic Expressions — 292
10.1.1 Elementary Stereoisograms of Skeletons with Position Numbering — 292
10.1.2 Stereoisograms Based on Elementary Stereoisograms — 299
10.2 Enumeration Under *RS*-Stereoisomeric Groups — 307
10.2.1 Subgroups of the *RS*-Stereoisomeric Group $C_{3v\widehat{o}\widehat{1}}$ — 307
10.2.2 Coset Representations — 310
10.2.3 Mark Table and its Inverse — 311
10.2.4 Subduction for *RS*-Stereoisomeric Groups — 313
10.2.5 USCI-CFs for *RS*-Stereoisomeric Groups — 314
10.2.6 SCI-CFs for *RS*-Stereoisomeric Groups — 317
10.2.7 The PCI Method for *RS*-Stereoisomeric Groups — 317
10.2.8 Type-Itemized Enumeration by the PCI Method — 322
10.2.9 Gross Enumeration Under *RS*-Stereoisomeric Groups — 324
10.3 Comparison with Enumeration Under Subgroups — 326
10.3.1 Comparison with Enumeration Under Point Groups — 326
10.3.2 Comparison with Enumeration Under *RS*-Permutation Groups — 328
10.3.3 Comparison with Enumeration Under Maximum-Chiral Point Subgroups — 331
10.4 *RS*-Stereoisomers as Intermediate Concepts — 332

11 Stereoisograms for Tetrahedral Derivatives — 335
11.1 *RS*-Stereoisomeric Group $T_{d\widehat{o}\widehat{1}}$ and Elementary Stereoisogram — 335
11.2 Stereoisograms of Five Types for Tetrahedral Derivatives — 337
11.2.1 Type-I Stereoisograms of Tetrahedral Derivatives — 339
11.2.2 Type-II Stereoisograms of Tetrahedral Derivatives — 340
11.2.3 Type-III Stereoisograms of Tetrahedral Derivatives — 340
11.2.4 Type-IV Stereoisograms of Tetrahedral Derivatives — 342
11.2.5 Type-V Stereoisograms of Tetrahedral Derivatives — 342
11.3 Enumeration Under the *RS*-Stereoisomeric Group $T_{d\widehat{o}\widehat{1}}$ — 344
11.3.1 Non-Redundant Set of Subgroups and Five Types of Subgroups — 344
11.3.2 Subduction of Coset Representations — 347

11.3.3 The PCI Method for the *RS*-Stereoisomeric Group $T_{d\widehat{\sigma}\widehat{I}}$ — 348
11.3.4 Type-Itemized Enumeration by the PCI Method — 354
11.4 Comparison with Enumeration Under Subsymmetries — 357
11.4.1 Enumeration of Tetrahedral Promolecules Under the Point-Group Symmetry — 357
11.4.2 Enumeration of Tetrahedral Promolecules Under the *RS*-Permutation-Group Symmetry — 358
11.4.3 Comparison with Enumeration Under Maximum-Chiral Point Subgroups — 361
11.4.4 Confusion Between the Point-Group Symmetry and the *RS*-Permutation-Group Symmetry — 362

12 Stereoisograms for Allene Derivatives — 365
12.1 *RS*-Stereoisomeric Group $D_{2d\widehat{\sigma}\widehat{I}}$ and Elementary Stereoisogram — 365
12.2 Stereoisograms of Five Types for Allene Derivatives — 367
12.2.1 Type-I Stereoisograms of Allene Derivatives — 367
12.2.2 Type-II Stereoisograms of Allene Derivatives — 369
12.2.3 Type-III Stereoisograms of Allene Derivatives — 371
12.2.4 Type-IV Stereoisograms of Allene Derivatives — 374
12.2.5 Type-V Stereoisograms of Allene Derivatives — 375
12.3 Enumeration Under the *RS*-Stereoisomeric Group $D_{2d\widehat{\sigma}\widehat{I}}$ — 377
12.3.1 Non-Redundant Set of Subgroups and Five Types of Subgroups — 377
12.3.2 Subduction of Coset Representations — 379
12.3.3 The PCI Method for the *RS*-Stereoisomeric Group $D_{2d\widehat{\sigma}\widehat{I}}$ — 380
12.3.4 Type-Itemized Enumeration by the PCI Method — 385
12.4 Comparison with Enumeration Under Subsymmetries — 387
12.4.1 Enumeration of Allene Promolecules Under the Point-Group Symmetry — 387
12.4.2 Enumeration of Allene Promolecules Under the *RS*-Permutation-Group Symmetry — 388

13 Combined-Permutation Representations (CPRs) — 391
13.1 Chemical Compounds as Graphs vs. as 3D Structures — 391
13.2 CPRs as Computer-Oriented Representations of Point Groups — 392
13.2.1 Coset Representations — 392
13.2.2 Mirror-Permutation Representations — 393
13.2.3 Combined Representations and The Corresponding Groups — 395
13.2.4 Partition into Conjugacy Classes — 396
13.3 Correspondence Between O_h-Skeletons — 398
13.3.1 Combined-Permutation Groups for O_h-Skeletons — 398
13.3.2 Isomorphism between Combined-Permutation Groups for O_h-Skeletons — 399

13.4 Calculation of CI-CFs — 400
13.4.1 Products of Sphericity Indices — 400
13.4.2 Definition of CI-CFs — 405
13.4.3 Functions for Calculating CI-CFs — 406
13.4.4 Practices of Calculation of CI-CFs — 407
13.5 Combinatorial Enumeration — 409
13.5.1 Generating Functions Derived From CI-CFs — 409
13.5.2 Selective Calculation of Coefficients of Generating Functions — 411
13.5.3 Merits of the Present Procedure in Enumeration by Fujita's Proligand Method — 415
13.6 Conclusive Remarks on Applicability of Combined-Permutation Representations — 417
13.7 Appendix A — 419
13.8 Appendix B — 423

14 Stereochemical Nomenclature — 426
14.1 Absolute Configuration — 426
14.1.1 Single Pair of Attributes 'Chirality/Achirality' in Modern Stereochemistry — 426
14.1.2 Three Pairs of Attributes in Fujita's Stereoisogram Approach — 428
14.1.3 Three Aspects of Absolute Configuration — 429
14.2 Quadruplets of *RS*-Stereoisomers as Equivalence Classes — 430
14.2.1 Three Types of Pairwise Relationships in a Quadruplet of *RS*-Stereoisomers — 430
14.2.2 Formulation of Stereoisograms as Quadruplets of *RS*-Stereoisomers — 432
14.3 Inner Structures of Promolecules — 432
14.3.1 Inner Structures of *RS*-Stereogenic Promolecules — 433
14.3.2 Inner Structures of *RS*-Astereogenic Promolecules — 436
14.4 Assignment of Stereochemical Nomenclature — 439
14.4.1 Single Criterion for Giving *RS*-Stereodescriptors — 439
14.4.2 *RS*-Diastereomers: the CIP Priority System — 440
14.4.3 *R/S*-Stereodescriptors and Stereoisograms — 443
14.4.4 Chirality Faithfulness — 444
14.4.5 Stereochemical Notations for Other Skeletons — 446

15 Pro-*RS*-Stereogenicity Based on Orbits — 449
15.1 Prochirality vs. Pro-*RS*-Stereogenicity — 449
15.1.1 Prochirality as a Geometric Concept — 449
15.1.2 Pro-*RS*-Stereogenicity as a Stereoisomeric Concept — 450
15.1.3 Prochirality and Pro-*RS*-Stereogenicity for Tetrahedral Derivatives — 450

15.2 Orbits under *RS*-Permutation Groups — **452**
15.2.1 *RS*-Tropicity — **452**
15.2.2 Pro-*RS*-Stereogenicity as a Stereoisomeric Concept — **453**
15.3 *pro-R/pro-S*-Descriptors — **455**
15.3.1 *RS*-Diastereotopic Relationships — **455**
15.3.2 Single Criterion for Giving *pro-R/pro-S*-descriptors — **455**
15.3.3 Probe Stereoisograms for Assining *pro-R/pro-S*-Descriptors — **457**
15.3.4 Misleading Interpretation of 'Prochirality' in Modern Stereochemistry — **459**
15.4 Pro-*RS*-Stereogenicity Distinct From Prochirality — **460**
15.4.1 Simultaneity of Prochirality and Pro-*RS*-Stereogenicity in a Type-IV Promolecule — **460**
15.4.2 Coincidence of Prochirality and Pro-*RS*-stereogenicity — **463**
15.4.3 Prochiral (but Already *RS*-Stereogenic) Promolecules — **465**
15.5 Pro-*RS*-Stereogenicity for *pro-R/pro-S*-Descriptors — **466**

16 Perspectives — 470
16.1 Enumeration of Highly Symmetric Molecules — **470**
16.2 Interaction of Orbits of Different Kinds — **470**
16.3 Correlation Diagrams of Stereoisograms — **471**
16.4 Group Hierarchy — **472**
16.5 Combined-Permutation Representations (CPRs) and the GAP System — **474**
16.6 Non-Rigid Molecules and Conformations — **474**
16.7 Interdisciplinary Nature of Mathematical Stereochemistry — **475**
16.7.1 Mathematical and Stereochemical Barriers In Practical Levels — **475**
16.7.2 Mathematical and Stereochemical Barriers In Conceptual Levels — **476**
16.8 Stereochemistry and Stereoisomerism. Theoretical Foundations — **477**
16.9 Hints for Further Investigations — **478**

Index — 485
