1	Introduction	1
1.1	Air and atmosphere – a multiphase and multi-component system	1
1.2	Chemistry and environmental research	6
1.3	A historical perspective of air, water and chemistry	12
1.3.1	From Antiquity to the Renaissance: Before the discovery of the air composition	12
1.3.2	Discovery of the air and water composition	16
1.3.3	Discovery of trace substances in air	20
1.3.4	Dust and acid rain: Air pollution	22
2	Chemical evolution	27
2.1	The pre-biological period	28
2.1.1	Origin of elements, molecules and the earth	28
2.1.2	Origin of organic bonded carbon	37
2.1.2.1	What is organic chemistry?	38
2.1.2.2	Origin of carbon	40
2.1.3	Origin of nitrogen	46
2.2	Evolution of the atmosphere	48
2.2.1	Degassing of the earth: The formation of the atmosphere	49
2.2.1.1	Volcanic gases	49
2.2.1.2	Gases occluded and produced from rocks	52
2.2.1.3	The pre-biological primitive atmosphere	57
2.2.2	Biosphere-atmosphere interaction	62
2.2.2.1	Origin of life	62
2.2.2.2	The rise of oxygen and ozone: Biogeochemical evolution	67
2.2.2.3	Photosynthesis: Non-equilibrium redox processes	74
2.2.2.4	A short history of understanding of photosynthesis	81
2.2.2.5	The carbon and oxygen pools and global cycling	85
2.2.2.6	Life limits by catastrophic events: Mass extinction	93
2.3	The earth's energy sources	94
2.3.1	Solar radiation	95
2.3.1.1	The sun and its radiation output	95
2.3.1.2	Solar radiation transfer through the atmosphere	96
2.3.2	Absorption and emission of light	102
2.3.2.1	Absorption (Lambert-Beer law)	103
2.3.2.2	Emission (Planck's law and Stefan-Boltzmann's law)	104
2.3.3	Terrestrial radiation and radiation budget	106
2.3.4	Geothermal energy	108
2.3.5	Renewable energy	110
2.3.5.1	Wind energy	110
2.3.5.2	Water energy	111
2.3.5.3	Bioenergy	111

2.3.5.4	Comparison among earth's energy sources – potential for humans	114
2.3.6	Abiogenic versus biogenic formation of “fossil fuels”	116
2.4	The biosphere and global biogeochemical cycles	117
2.4.1	Biosphere and the noosphere	118
2.4.2	Biogeochemical cycling: The principles	123
2.4.3	Global biogeochemical cycles	127
2.4.3.1	Nitrogen	128
2.4.3.2	Sulfur	132
2.4.3.3	Chlorine	136
2.4.4	What is the role of life in earth's climate system?	141
2.5	The hydrosphere and the global water cycle	145
2.5.1	Water: Physical and chemical properties	146
2.5.1.1	Water structure: Hydrogen bond	147
2.5.1.2	Water as solvent	150
2.5.1.3	Water properties in relation to the climate system	151
2.5.2	Hydrologic cycle and the climate system	152
2.5.3	Atmospheric water	155
2.5.3.1	Water vapor	157
2.5.3.2	Clouds	159
2.5.3.3	Haze, mist and fog	162
2.5.3.4	Precipitation	163
2.5.4	Dew, frost, rime and interception	165
2.5.5	Soil water and groundwater: Chemical weathering	167
2.5.6	Surface water: Rivers and lakes	168
2.5.7	The oceans	170
2.6	Sources of atmospheric substances	172
2.6.1	Source characteristics	172
2.6.2	Biogenic sources	173
2.6.2.1	Vegetation and microorganisms (soils and waters)	173
2.6.2.2	Animals	176
2.6.3	The ocean as source	178
2.6.4	Geogenic sources	181
2.6.4.1	Soil dust	181
2.6.4.2	Sea salt	184
2.6.4.3	Volcanism and emanation	185
2.6.4.4	Lightning	190
2.6.4.5	Biomass burning	192
2.6.4.6	Atmospheric chemistry: Secondary sources	198
2.6.5	Anthropogenic sources	201
2.6.5.1	Fossil fuel use: The energy problem	202
2.6.5.2	Agriculture: The food problem	209
2.6.5.3	Land-use change and deforestation: The population problem	212
2.7	Emission of atmospheric substances	215
2.7.1	Nitrogen compounds	219
2.7.1.1	Ammonia (NH_3)	219
2.7.1.2	Dinitrogen monoxide (N_2O)	222
2.7.1.3	Nitrogen monoxide (NO)	223
2.7.2	Sulfur compounds	225
2.7.2.1	Sulfur dioxide (SO_2)	225

2.7.2.2	Reduced sulfur compounds (H_2S , DMS, COS)	228
2.7.3	Carbon compounds	230
2.7.3.1	Carbon dioxide (CO_2)	230
2.7.3.2	Carbon monoxide (CO)	231
2.7.3.3	Methane (CH_4)	233
2.7.3.4	Non-methane volatile organic compounds (NMVOC)	234
2.8	The human problem: A changing earth system	238
2.8.1	Humans historic perspective: From the past into the future	240
2.8.2	Changing chemical composition of the atmosphere: Variations and trends	245
2.8.2.1	Fundamentals: Why concentration fluctuates?	248
2.8.2.2	SO_2 , NO_2 and dust: Classic for local to regional up-scaling	250
2.8.2.3	CO_2 : The fossil fuel era challenge	254
2.8.2.4	CH_4 and N_2O : Permanent agricultural associates	264
2.8.2.5	Halogenated organic compounds: Sit out problem	268
2.8.2.6	CO: The biomass burning problem	270
2.8.2.7	O_3 : Locally believed to be solved but regional unsolved	272
2.8.2.8	H_2O_2 : Mysterious	282
2.8.2.9	OH: The key oxidant	285
2.8.2.10	H_2 : Light but problematic	287
2.8.3	The carbon problem: Out of balance	288
2.8.3.1	The carbon budget	288
2.8.3.2	The CO_2 -carbonate system	293
2.8.3.3	Atmospheric CO_2 residence time	303
2.8.4	Global sustainable chemistry	306
2.8.4.1	Growth and equilibrium (stationary state)	307
2.8.4.2	Man-made carbon cycling: Air capture and CO_2 cycling	309
3	Climate, climate change and the climate system	321
3.1	Climate and climatology: A historical perspective	323
3.2	Climate and the climate system	328
3.3	Chemical weather and climate	331
3.4	Climate change and variability	334
4	Fundamentals of physico-chemistry in the climate system	345
4.1	Physical basics	346
4.1.1	Properties of gases: The ideal gas	347
4.1.1.1	Fluid characteristics	347
4.1.1.2	The gas laws	348
4.1.1.3	Mean free path and number of collisions between molecules	352
4.1.1.4	Viscosity	355
4.1.1.5	Diffusion	356
4.1.2	Units for chemical abundance: Concentrations and mixing ratios	357
4.1.3	Thermodynamics: The equations of state	361
4.1.4	Equilibrium	366
4.1.5	Steady state	368
4.2	Chemical reactions	371
4.2.1	Kinetics: The reaction rate constant	372
4.2.2	Radicals	379
4.2.3	Photochemistry: The photolysis rate constant	380

4.2.4	Oxidation and reduction (the redox processes)	385
4.2.5	Acid–base reactions: Acidity and alkalinity	390
4.2.5.1	Environmental relevance of acidity.	390
4.2.5.2	Acid–base theories	391
4.2.5.3	Atmospheric acidity	395
4.2.5.4	pH averaging.	401
4.3	Multiphase processes	402
4.3.1	Aerosols, clouds and precipitation: The climate multiphase system	405
4.3.2	Gas-liquid equilibrium (<i>Henry</i> equilibrium)	407
4.3.3	Properties of droplets	409
4.3.3.1	Vapor pressure change: The <i>Kelvin</i> equation.	410
4.3.3.2	Surface tension and surface active substances.	412
4.3.3.3	Vapor pressure lowering: <i>Raoult's</i> law	413
4.3.3.4	Freezing point depression	415
4.3.4	Gas-to-particle formation: Homogeneous nucleation.	416
4.3.5	Atmospheric aerosols and properties of aerosol particles	421
4.3.6	Formation of cloud droplets: Heterogeneous nucleation	428
4.3.7	Scavenging: Accommodation, adsorption and reaction (mass transfer).	429
4.3.7.1	Mass transfer: General remarks	429
4.3.7.2	Adsorption	435
4.3.7.3	Surface chemistry: Kinetics of heterogeneous chemical reaction	436
4.3.7.4	Mass transfer into the droplet with chemical reaction.	438
4.4	Atmospheric removal: Deposition processes	442
4.4.1	Dry deposition	443
4.4.2	Wet deposition	449
4.5	Characteristic times: Residence time, lifetime and turnover time	451
5	Substances and chemical reactions in the climate system	459
5.1	Introduction	459
5.1.1	The principles of chemistry in the climate system	459
5.1.2	Substances in the climate system	462
5.2	Hydrogen	464
5.3	Oxygen	465
5.3.1	Atomic, molecular oxygen and ozone: O, O ₂ and O ₃ (O _x)	467
5.3.2	Reactive oxygen species I: OH, HO ₂ and H ₂ O ₂ (O _x H _y species)	471
5.3.2.1	Atmosphere, free of trace species	471
5.3.2.2	Atmosphere with trace species	474
5.3.3	Reactive oxygen species II: RO, RO ₂ and ROOH.	478
5.3.4	Water and the hydrated electron: H ₂ O and H ₂ O [−] (e _{aq} [−])	481
5.3.5	Aqueous phase oxygen chemistry	490
5.3.5.1	From dioxygen to peroxide (O ₂ chemistry)	492
5.3.5.2	From ozone to hydroxyl (O ₃ and O ₁ chemistry)	499
5.3.6	Multiphase oxygen chemistry	503
5.3.6.1	Historical remarks	504
5.3.6.2	Hydrogen peroxide	506
5.3.6.3	Ozone.	509
5.3.7	Stratospheric oxygen chemistry.	511

5.4	Nitrogen.	516
5.4.1	Thermolysis of nitrogen: Formation of NO	517
5.4.2	Ammonia (NH ₃).	518
5.4.3	Dinitrogen monoxide (N ₂ O)	519
5.4.4	Nitrogen monoxide (NO), nitrogen dioxide (NO ₂) and oxo acids	519
5.4.4.1	Gas phase chemistry.	519
5.4.4.2	Aqueous phase and interfacial chemistry	524
5.4.5	Organic nitrogen compounds	535
5.4.5.1	Amines and nitriles	536
5.4.5.2	Organic NO _x compounds	537
5.5	Sulfur	538
5.5.1	Sulfides (H ₂ S, CS ₂ , COS, RSH): Reduced sulfur	541
5.5.2	Oxides and oxoacids: SO ₂ , H ₂ SO ₃ , SO ₃ , H ₂ SO ₄	545
5.5.2.1	Gas phase SO ₂ oxidation.	546
5.5.2.2	Aqueous sulfur chemistry	546
5.5.3	Multiphase sulfur chemistry	554
5.6	Phosphorus	555
5.7	Carbon.	558
5.7.1	Elemental carbon and soot	559
5.7.2	C ₁ chemistry: CO, CO ₂ , CH ₄ , CH ₃ OH, HCHO, HCOOH	561
5.7.3	C ₂ chemistry: C ₂ H ₂ , C ₂ H ₄ , C ₂ H ₆ , C ₂ H ₅ OH, CH ₃ CHO, CH ₃ COOH, (COOH) ₂	566
5.7.4	Alkenes, ketones and aromatic compounds	572
5.7.5	Is the atmospheric fate of complex organic compounds predictable?	574
5.8	Halogens (Cl, Br, F and I).	575
5.8.1	Gas phase chemistry.	576
5.8.2	Aqueous and interfacial chemistry	579
5.9	Other elements	583
6	Final remark	585
	Appendix	589
A.1	List of acronyms and abbreviations found in literature	589
A.2	Quantities, units and some useful numerical values	594
A.3	The geological timescale	598
A.4	Biography	599
	References	611
	Author index	691
	Subject index	695
