

Contents

1	Introduction	1
2	Fundamentals	3
2.1	Laser propagation and related effects	3
2.1.1	Linear propagation	4
2.1.2	Bound-electronic nonlinearity	6
2.1.3	Ionization	7
2.1.4	Thermal lensing	8
2.2	High-power ultrafast lasers	9
2.2.1	Chirped-pulse amplification	9
2.2.2	Laser geometries	10
2.2.3	Fiber lasers	11
2.2.4	Ytterbium doping	12
2.3	Coherent beam combination	13
2.3.1	Concept	13
2.3.2	Statistical properties	15
2.3.3	Combining schemes	16
2.4	Interferometric phase stabilization	17
2.4.1	Hänsch-Couillaud detection	18
2.4.2	LOCSET	19
2.5	Group delay and alignment optimization	21
2.5.1	Group delay detection	22
2.5.2	Alignment detection	24
2.6	Summary	27
3	Polarization beam combining	28
3.1	Eight-channel laser system	28
3.2	Sixteen-channel laser system	34
3.3	Summary	38
4	Intensity beam combining	39
4.1	Four-channel laser system	40
4.2	Twelve-channel laser system	48
4.3	Summary	58
5	Fundamental limits	59
5.1	Kerr effect	60
5.2	Thermal lensing	61
5.2.1	Aberration models	61

5.2.2	Fused-silica intensity beam splitters	66
5.2.3	Fused silica thin film polarizers	69
5.2.4	Alternate substrates	70
5.2.5	Comparison to DOEs and aperture tiling	70
5.3	Summary	71
6	Technical challenges	73
6.1	Phase stabilization	73
6.2	Thermal aberrations in the combined-beam path	75
6.3	Integration with multi-core fiber	77
6.4	Summary	84
7	Multipass cell nonlinear compression	85
7.1	Theory	87
7.2	Experiment	91
7.3	Average-power scalability	95
7.4	Summary	96
8	Conclusion	97
A	Appendix	99
A.1	Suppression of uncorrelated perturbations	99
A.2	Convergence of the combining efficiency	100
A.3	Efficiency penalty due to the Kerr effect	101
A.4	Definition of the Fourier transform	102
A.5	Material parameters	103
A.6	MATLAB code	104
	Bibliography	107
	Summary (Zusammenfassung)	123
	Acknowledgment (Danksagung)	127
	Curriculum vitae (Lebenslauf)	128
	Ehrenwörtliche Erklärung (Statement of authorship)	129
