Preface	xi
List of figures	xix
List of tables	xxv
List of abbreviations and acronyms	xxvii
1 Historical variations in the Earth's climate	1
1.1 Historical temperatures	1
1.1.1 Use of proxies to estimate historical temperatures	1
1.1.1.1 Tree rings	2
1.1.1.2 Ice cores	5
1.1.1.3 Ocean and stream sediments	6
1.1.1.4 Pollen	7
1.1.1.5 Boreholes	7
1.1.1.6 Corals	9
1.1.2 Proxies and climate	9
1.1.2.1 Processing proxy data	9
1.1.2.2 Challenges in using proxies	10
1.2 Ice ages and interglacial periods	13
1.2.1 The Pleistocene	15
1.2.2 The last ice age	19
1.2.3 Proposed explanations for ice ages	22
1.2.3.1 Variations in the Earth's orbit and ice ages	22
1.2.3.2 Cosmos theory	25
1.2.3.3 Atlantic Ocean circulation variation	26
1.2.4 Sudden climate changes	27
1.2.4.1 Mechanisms behind sudden climate transitions.	29

1.2.4.2	North Atlantic circulation as a trigger or an amplifier in rapid climate changes	29
1.2.4.3	Carbon dioxide as a feedback in sudden changes	33
1.2.4.4	Surface reflectivity (albedo) of ice, snow, and vegetation.	34
1.3	Holocene temperature history.	35
1.3.1	Introduction	35
1.3.2	Glacial sediments	36
1.3.3	Plant pollen proxies.	37
1.3.4	Borehole measurements	37
1.3.5	Ocean sediment cores	37
1.3.6	Other Holocene results	41
2	Temperatures in the past millennium	43
2.1	The Little Ice Age and the Medieval Warm Period	44
2.1.1	Anecdotal inferences on the MWP and the LIA	47
2.1.2	The Medieval Warm Period	49
2.1.2.1	Climate models for the MWP: effects of changes in land use	49
2.1.2.2	Proxy analysis	52
2.1.3	The Little Ice Age	61
2.1.4	Sea surface temperatures in the Sargasso Sea	66
2.1.5	Other proxy studies.	66
2.1.5.1	China	66
2.1.5.2	Borehole measurements	71
2.1.5.3	Arctic environment change of the last four centuries	71
2.1.5.4	Iceland perspective	73
2.2	Average global and hemispheric temperatures in the past millennium.	74
2.2.1	The “MBH” model	74
2.2.2	Other reconstructions of historical temperature	79
2.2.3	Criticisms of the MBH model	82
2.2.3.1	McIntyre and McKittrick	82
2.2.3.2	Bürger and Cubasch	88
2.2.3.3	The Wegman Report	89
2.2.3.4	Esper <i>et al.</i>	92
2.2.3.5	Soon and Baliunas	92
2.2.3.6	Zorita and von Storch	94
2.2.3.7	The paleoclimatic cabal	94
2.2.3.8	How reliable are proxy methods?	96
2.3	The blogs	98
2.3.1	Climate audit blog	99
2.3.2	Real climate blog	101
2.4	Conclusions on millennium temperature history	104

3	Temperatures in the past century	109
3.1	Near-surface measurements	109
3.1.1	Meteorological data sets	109
3.1.2	Problems with surface temperature data	112
3.1.3	Deviations from the mean	115
3.1.4	Utility of a single global temperature	116
3.2	Measured Earth, regional, and local temperatures	117
3.2.1	U.S. temperature measurements	117
3.2.2	Global and hemispheric temperatures	120
3.2.3	Antarctic and Arctic temperatures	126
3.2.3.1	Antarctic temperatures	127
3.2.3.2	Arctic temperatures	132
3.2.4	The NH temperature dip, 1940–1978: effect of aerosols	137
3.2.5	Adequacy of the global temperature network	142
3.2.6	Troposphere temperatures	151
3.2.7	Diurnal temperature range	158
3.2.8	Ruminations of Bob Foster	160
3.2.9	Earliest measured European and Greenland temperatures: 1751–1995	161
3.2.9.1	European temperatures	161
3.2.9.2	Greenland temperatures	162
3.2.10	Mountain glaciers as climate indicators	163
4	Variability of the Sun	167
4.1	Solar irradiance	167
4.1.1	Introduction	167
4.1.2	Measurements of TSI in space since 1978	169
4.1.3	Short-term TSI models	170
4.1.4	Long-term TSI models	170
4.2	Aspects of solar variability	171
4.2.1	The solar cycle	171
4.2.2	Sunspots	172
4.2.3	Faculae	172
4.2.4	Sunspot indices	173
4.2.5	Estimation of sunspot activity from proxies	175
4.2.6	Diameter of the Sun	178
4.2.7	Indices of solar activity	178
4.2.8	Effect of the Sun–Earth distance	179
4.3	The Maunder Minimum; John Eddy’s Study	179
4.3.1	Historical telescope observations of sunspots	179
4.3.2	Historical records of aurorae	180
4.3.3	Historical visual observations of sunspots	185
4.3.4	¹⁴ Carbon in tree rings	186
4.3.5	The solar corona	186

4.3.6	Beckman and Mahoney on Eddy's work	187
4.3.7	Eddy's conclusions	188
4.4	Reconstructing total solar irradiance (TSI) in the past	188
4.4.1	Reconstructions based on sunspots, solar cycles, and solar activity	188
4.4.1.1	Introduction	188
4.4.1.2	Hoyt and Schatten	189
4.4.2	Constant quiet Sun models	191
4.4.2.1	CQSM based on sunspot number	191
4.4.2.2	CQSM based on sunspot area and cycle duration	196
4.4.3	The MM temperature model	199
4.4.4	Stellar Ca HK index models	202
4.4.5	Solar cycle duration model	212
4.4.5.1	The "Sun Melody"	212
4.4.5.2	Danish Meteorological Institute studies	213
4.4.5.3	Hoyt and Schatten model	217
4.4.6	Coronal source flux model	219
4.5	TSI reconstructions based on cosmogenic isotope proxies	221
4.5.1	Introduction	221
4.5.2	Reconstruction of TSI from cosmo-nuclide production proxies	223
4.5.3	Projections for the Holocene	224
4.6	Temperature changes driven by the Sun	228
4.6.1	Global climate models	228
4.6.2	Climate sensitivity parameter	230
4.7	Conclusions on TSI	234
5	The Earth's heat balance and the greenhouse effect	239
5.1	The greenhouse effect	239
5.1.1	Terrestrial examples	239
5.1.2	Simplistic models of the Earth	241
5.2	The Earth's heat balance	243
5.2.1	Major heat flows	243
5.2.2	Greenhouse gas effects and water vapor	244
5.2.2.1	Absorption by greenhouse gases	244
5.2.2.2	Water vapor as a greenhouse gas	246
5.2.3	Albedo of the Earth	254
5.2.4	Ocean emissivity	256
5.2.5	Heat islands of the Earth	256
5.2.5.1	Differences between surface temperatures and tropospheric temperatures	256
5.2.5.2	Correlation of surface temperatures with CO ₂ sources	258
5.2.5.3	Urban heat islands	259
5.2.5.4	Heat generation by urbanization	261

5.2.6	Effects of land use/land clearing changes	262
5.2.7	Effect of clouds	265
5.2.8	Heat capacity, time constant, and sensitivity of Earth's climate system	267
5.2.9	Heat content of the oceans	270
5.2.10	El Niños and climate	272
5.2.11	North Atlantic climate variability and ocean oscillations	279
5.3	Volcanic eruptions	281
5.4	Global climate models	287
5.4.1	Description of GCMs	287
5.4.2	The IPCC view of climate models	288
5.4.3	Uncertainties and limitations of GCMs	291
5.5	Instability of the climate	297
6	Anthropogenic influences on climate change	299
6.1	CO ₂ concentration: past and present	299
6.1.1	Measurements and proxies	299
6.1.2	Carbon cycle: CO ₂ fluxes	302
6.1.3	CO ₂ variations in glacial–interglacial cycles	307
6.1.4	CO ₂ and global warming	314
6.2	Projections of future CO ₂ concentration by climatologists	316
6.3	Projections of future global temperature rise due to CO ₂	322
6.4	Energy and climate in the 21st century	326
6.5	Constraints on CO ₂ production imposed by the limits of fossil fuels	331
6.6	An alternate theory of 20th-century global warming	332
6.6.1	Introduction	332
6.6.2	Black carbon (BC) deposition on Arctic snow and ice	340
6.6.2.1	Effect of carbon deposition on Ice and snow	340
6.6.2.2	Rate of emission of carbon in the 20th century	341
6.6.2.3	Estimated role of BC in Arctic warming	341
6.6.2.4	Measurement of BC in Greenland ice cores	343
6.6.3	Role of sulfate aerosols and El Niños	344
6.6.4	Summary	345
7	Impacts of global warming	347
7.1	Global-warming alarmists	347
7.1.1	The alarmist viewpoint	347
7.1.2	Orthodoxy in climatology and the politicalization of science	353
7.2	Global-warming naysayers	361
7.3	Sea level rise, the ice sheets, and sea ice	364
7.3.1	Introduction to sea level rise	364
7.3.2	Direct measurements of sea level	366
7.3.3	Measurements of ice sheet and sea ice extent	370
7.3.4	Global warming and sea level rise	374
7.3.5	Sea ice extent	381
7.4	Future increases in global temperature	386

x **Contents**

7.5	Changes in precipitation: floods, drought, and storms	388
7.5.1	Drought	388
7.5.2	Floods	389
7.5.3	Storms	389
7.6	Species extinction.	393
8	Global climate change and public policy	395
8.1	The Kyoto Protocol	395
8.1.1	Description of the Kyoto Protocol	395
8.1.2	Status of the Kyoto Agreement	396
8.1.3	Commentary on Kyoto Protocol	398
8.2	Economics: Will it cost more to do nothing?	402
8.2.1	The Stern Report	402
8.2.2	Nordhaus Review of Stern Report	405
8.2.3	Investment opportunities in climate change.	409
8.3	U.S. Congress: meeting the climate change challenge	410
9	Final remarks	413
9.1	Conclusions	413
9.2	The nine questions	421
	Appendix: Review of the film <i>An Inconvenient Truth</i>	427
	References	437
	Index	467
