Preface xi

1 Structure and Properties of Flavins 1

Tetiana Pavlovska and Radek Cibulka

- 1.1 Introduction and History of Flavins Discovery 1
- 1.2 The Structure of the Flavins and Their Derivatives 3
- 1.3 The Acid–Base and Redox Properties of Flavin Derivatives 5
- 1.3.1 Selected Chemical Reduction and Oxidation Reactions 9
- 1.4 The Reactions of Flavin Derivatives with Nucleophiles and Electrophiles 12
- 1.5 Noncovalent Interactions of Flavin Derivatives 16
- 1.6 Conclusions 19
- References 20

2 Natural Flavins: Occurrence, Role, and Noncanonical Chemistry 29

Jeroen Drenth and Marco W. Fraaije

- 2.1 Introduction 29
- 2.2 Flavin Biosynthesis 30
- 2.3 Covalently Bound Flavin Cofactors 31
- 2.3.1 Types and Occurrence of Covalent Protein–Flavin Bonds 33
- 2.3.2 The Mechanisms of Protein–Flavin Bond Formation 34
- 2.3.2.1 Formation of the Protein–Flavin Bond at the C8a Position 34
- 2.3.2.2 Formation of the 6-S-Cysteiny–Flavin Bond 36
- 2.3.2.3 Formation of the Phosphoester Threonyl–FMN Bond 36
- 2.3.3 The Function of Covalent Flavinylation 38
- 2.3.3.1 Redox Potential 38
- 2.3.3.2 Structural Integrity and Holoenzyme Lifetime 39
- 2.4 Naturally Occurring Riboflavin Analogues and Modified Flavins – Roles and Occurrence 39
- 2.4.1 6-Hydroxy and 7-Methyl-8-Hydroxyflavins 39
- 2.4.2 6-(3'-(R)-Myristyl)Flavin Mononucleotide 41

2.4.3	Chizoflavins	41
2.4.4	7-Hydroxymethyl and 8-Hydroxymethyl Riboflavin	41
2.4.5	Plant Root Iron Uptake Cofactors	41
2.4.6	Roseoflavin – An Antimicrobial Flavin Analogue	42
2.4.7	8-Formyl Flavins	42
2.4.8	Prenyl-FMN	43
2.4.9	Artificial Cofactors and Novel Catalytic Activity	44
2.5	N5-substrate and N5-oxygen Adducts	45
2.5.1	Redox-neutral Covalent Catalysis	45
2.5.2	N5-oxygen Adducts	47
2.6	F ₄₂₀ – A Natural Deazaflavin	49
2.6.1	Structure and Properties of F ₄₂₀	49
2.6.2	Physiological Functions of F ₄₂₀	49
2.6.3	F ₄₂₀ Biosynthesis	50
2.6.4	F ₄₂₀ -dependent Enzymes in Biocatalysis	52
2.7	Conclusion	52
	References	53

3	Spectral Properties of Flavins	67
	<i>Marek Sikorski, Igor Khmelinskii, and Ewa Sikorska</i>	
3.1	Introduction	67
3.2	Flavin Derivatives in Organic Solvents	69
3.2.1	Spectroscopy and Photophysics	69
3.2.2	Photooxygenation	75
3.2.3	Solvent Effect	75
3.2.4	Photostability	77
3.3	Flavin Derivatives in Water	77
3.3.1	Flavin (Isoalloxazine) Type of Compounds	77
3.3.2	Alloxazine-type Compounds	80
3.3.3	Dezaalloxazine-type Compounds	83
3.3.4	Dezaaisoalloxazine-type Compounds	85
3.4	Conclusions	88
	References	88

4	Modes of Flavin-Based Catalysis	97
	<i>Radek Cibulka and Marco W. Fraaije</i>	
4.1	Introduction	97
4.2	Modes of Catalysis	100
4.2.1	Reactions Based on the Direct Transformation of a Substrate by Flavin	101
4.2.1.1	Organocatalysis and Biocatalysis in the Absence of Light	101
4.2.1.2	Flavin-Based Catalysis in an Excited State	105
4.2.2	Flavin Catalyst-Activated Reactive Species Used to Transform the Substrate	109
4.3	Flavin Catalysts Regeneration	110

4.4	Development of New Flavin-Based Catalytic Methodologies	113
	References	115
5	Organocatalytic Monooxygenations	125
	<i>Hiroki Iida and Yasushi Imada</i>	
5.1	Introduction	125
5.2	Catalytic Oxygenation with Hydrogen Peroxide	127
5.3	Catalytic Oxygenation with Molecular Oxygen	131
5.4	Asymmetric Oxygenation	137
5.5	Conclusion and Outlook	139
	References	140
6	Flavin-Based Supramolecular and Coupled Catalytic Systems	145
	<i>Hiroki Iida and Yasushi Imada</i>	
6.1	Introduction	145
6.2	Flavin-Based Supramolecular Systems	146
6.2.1	Supramolecular Systems for Control of Reactivity	146
6.2.2	Supramolecular Systems for the Control of Stereoselectivity	155
6.3	Flavin-Based Coupled Catalytic Systems	156
6.4	Conclusion and Outlook	164
	References	164
7	Flavoprotein Monooxygenases and Halogenases	169
	<i>Caroline E. Paul, Alice Guarneri, and Willem J.H. van Berkel</i>	
7.1	Introduction	169
7.1.1	Reaction Mechanisms of Flavoprotein Monooxygenases	169
7.1.2	Classification of Flavoprotein Monooxygenases	170
7.1.3	Oxygenation Reactions	173
7.2	Types of Reactions Catalyzed by Group A–H Enzymes	173
7.2.1	Group A Reactions	173
7.2.2	Group B Reactions	175
7.2.3	Group C Reactions	178
7.2.4	Group D Reactions	179
7.2.5	Group E Reactions	182
7.2.6	Group F Reactions	183
7.2.7	Group G and H Reactions	184
7.3	Further Considerations for Biocatalyst Applications	185
7.4	Conclusions and Outlook	186
	References	186
8	Flavoprotein-dependent Bioreduction	201
	<i>Helen S. Toogood and Nigel S. Scrutton</i>	
8.1	Introduction	201
8.2	Flavoprotein Reductases	202

8.2.1	Old Yellow Enzymes	202
8.2.2	Enoate Reductases	203
8.2.3	Nitroreductases	204
8.2.4	Deazaflavin Oxidoreductase	205
8.2.5	Geranylgeranyl Reductase	206
8.2.6	NADPH-dependent Quinone Reductases	206
8.3	Asymmetric Alkene Reduction: Biotechnological Applications	207
8.3.1	Supply of Reducing Equivalents	207
8.3.2	Industrially Relevant Chiral Products	209
8.3.2.1	Aldehydes and Ketones	209
8.3.2.2	Carboxylic Acids and Esters	211
8.3.2.3	Alcohols, Diols, and Phenolics	212
8.3.2.4	Monoterpenoids and Lactones	213
8.3.2.5	Other Industrially Useful Compounds	214
8.4	Conclusion	215
	References	216
9	Flavoprotein Oxidases	225
	<i>Daniel Ouedraogo and Giovanni Gadda</i>	
9.1	Introduction	225
9.2	General Features	226
9.3	Catalytic Cycle and Mechanism of Substrate Oxidation	228
9.4	C—O Bond Oxidation	229
9.4.1	5-Hydroxymethylfurfural Oxidase	230
9.4.2	<i>Phanerochaete chrysosporium</i> Alcohol Oxidase	230
9.4.3	Glycolate Oxidase	232
9.4.4	Glucose Oxidase	232
9.4.5	Pyranose Oxidase	234
9.4.6	Cholesterol Oxidase	235
9.5	C—N Bond Oxidation – D-Amino Acid Oxidase	235
9.6	C—S Bond Oxidation – Sulfhydryl Oxidases	236
9.7	C—C Bond Oxidation – NADH Oxidase	237
9.8	Conclusions	238
	Acknowledgments	240
	Funding	240
	References	240
10	Benzylic Photooxidation by Flavins	245
	<i>Beiyi Cheng and Burkhard König</i>	
10.1	Introduction	245
10.2	Flavins in Oxidations	246
10.2.1	Early Examples of Flavin Oxidation	246
10.2.2	More Recent Examples of Flavin Photooxidation	248
10.2.2.1	The Oxidation of Benzylic Alcohols	248
10.2.2.2	The Oxidation of Benzylic C—H Bonds	255

10.2.2.3	The Oxidation of Benzylic Amines	257
10.3	Conclusion	258
	References	260
11	New Applications of Flavin Photocatalysis	265
	<i>Eva Svobodová and Radek Cibulka</i>	
11.1	Introduction	265
11.2	Transformations Involving Oxidation of Heteroatoms	266
11.2.1	Sulfoxidation	267
11.2.2	Esterification	270
11.3	[2 + 2] Cycloaddition and Cycloelimination	272
11.3.1	[2 + 2] Cycloaddition	273
11.3.2	[2 + 2] Cycloelimination	274
11.4	Transformations Involving Isomerization and Oxidative Cyclization	276
11.4.1	<i>E-Z</i> Isomerization	276
11.4.2	Cyclization Toward Coumarins	278
11.4.3	Cyclization Toward Benzothiazoles	278
11.5	Transformations Involving Decarboxylation	279
11.6	Other Applications of Flavin-Based Oxidative Photocatalysis	282
11.6.1	Chlorination	282
11.6.2	Demethylation	283
11.7	Reductive Photocatalysis	283
11.8	Conclusions and Perspectives	285
	References	286
12	Light-Driven Flavin-Based Biocatalysis	293
	<i>Daria Grosheva and Todd K. Hyster</i>	
12.1	Introduction	293
12.2	Native Light-Driven Enzymes	295
12.3	Enzymes with Light-Driven Promiscuous Activities	299
12.4	Synergistic Photoenzymatic Catalysis	305
12.5	Conclusions and Outlook	309
