Preface — V

Acknowledgment — IX

1 Crossed modules of groups — 1

- 1.1 Definitions — 1
- 1.2 Relation to third cohomology I — 5
- 1.3 Relation to third cohomology II — 12
- 1.4 Relation to general group extensions — 16
 - 1.4.1 Outer actions and factor systems — 16
 - 1.4.2 Significance of the zero class in $H^3(G, Z)$ — 22
 - 1.4.3 The obstruction crossed module — 24
- 1.5 Construction of crossed modules — 30
 - 1.5.1 The principal construction — 30
 - 1.5.2 End of the proof of Theorem 1.2.1 — 32
 - 1.5.3 Constructions involving free groups — 34
- 1.6 Relation to the Lyndon–Hochschild–Serre spectral sequence — 39
- 1.7 Examples — 46
 - 1.7.1 The string group (after Stolz–Teichner) — 47
 - 1.7.2 The string group (after Baez–Crans–Schreiber–Stevenson) — 50
 - 1.7.3 A crossed module of diffeomorphisms — 52
- 1.8 Relation to relative cohomology — 54
- 1.9 Strict 2-groups — 62
- 1.10 Motivation: Classification of homotopy 2-types — 68
 - 1.10.1 The crossed module $\pi_2 \rightarrow \pi_1$ — 68
 - 1.10.2 Free crossed modules — 71
 - 1.10.3 Classifying 2-homotopy types — 78
- 1.11 Exercises — 81
- 1.12 Bibliographical notes — 83

2 Crossed modules of Lie algebras — 85

- 2.1 Definitions — 85
- 2.2 Relation to third cohomology I — 89
 - 2.2.1 Gerstenhaber’s theorem — 89
- 2.3 Relation to third cohomology II — 95
- 2.4 Relation to general extensions — 100
 - 2.4.1 Outer actions and factor systems — 101
 - 2.4.2 The obstruction crossed module — 106
- 2.5 Construction of crossed modules — 112
 - 2.5.1 The principal construction — 112

2.5.2	End of the proof of Theorem 2.2.1 —	114
2.6	Relation to Lie algebra kernels —	117
2.6.1	Lie algebra kernels and third cohomology —	117
2.6.2	Finite dimensional kernels —	122
2.7	Relation to the Hochschild–Serre spectral sequence —	128
2.8	Examples —	131
2.8.1	The string Lie algebra —	131
2.8.2	The string Lie algebra revisited —	133
2.8.3	A crossed module representing the Godbillon–Vey cocycle —	145
2.9	Relation to relative cohomology —	151
2.10	Strict Lie 2-algebras —	157
2.10.1	Crossed modules and cat^1 -Lie algebras —	158
2.10.2	Strict 2-vector spaces and 2-term complexes —	159
2.10.3	Strict Lie 2-algebras and crossed modules —	159
2.10.4	Semistrict Lie 2-algebras and 2-term L_∞ -algebras —	162
2.10.5	Classification of semistrict Lie 2-algebras —	163
2.11	Exercises —	166
2.12	Bibliographical notes —	167
3	Crossed modules of associative algebras —	169
3.1	Definitions —	169
3.1.1	Crossed modules with free algebras —	172
3.2	Relation to third cohomology I —	173
3.2.1	Constructing the map b —	173
3.2.2	Bijectivity of the map b —	178
3.3	Relation to third cohomology II —	185
3.4	Relation to general extensions —	188
3.5	Construction of crossed modules —	192
3.6	Associative algebra kernels —	194
3.6.1	Definition of an associative algebra kernel —	194
3.6.2	Cohomology class associated to a kernel —	195
3.6.3	Relation to general extensions —	198
3.6.4	The different extensions corresponding to a special kernel —	199
3.6.5	Gerstenhaber’s theorem for kernels —	202
3.7	Strict associative 2-algebras —	206
3.7.1	cat^1 -associative algebras —	206
3.7.2	Crossed modules and category objects in Alg —	208
3.8	Relation between crossed modules of associative and Lie algebras respective groups —	209
3.8.1	Definition of the functors —	209
3.8.2	Crossed modules of groups and of associative algebras —	210
3.8.3	Crossed modules of Lie algebras and of associative algebras —	216

3.9	Examples — 220
3.9.1	The crossed module associated to a cochain algebra — 220
3.9.2	The crossed module associated to a chain complex of vector spaces — 221
3.10	Exercises — 224
3.11	Bibliographical notes — 225
4	Crossed modules of Hopf algebras — 227
4.1	Preliminaries — 227
4.2	Crossed modules of Lie and Hopf algebras — 232
4.3	Crossed modules of groups and Hopf algebras — 237
4.4	Crossed comodules of groups and Hopf algebras — 239
4.5	Integration of crossed modules of Lie algebras — 243
4.5.1	Integration into formal groups — 243
4.5.2	Integration into an algebraic group — 244
4.5.3	Integration of crossed modules — 245
4.6	Crossed modules of Hopf algebras and cat^1 -Hopf algebras — 248
4.6.1	Semidirect product of Hopf algebras — 248
4.6.2	cat^1 -Hopf algebras — 253
4.6.3	Equivalence between crossed module and cat^1 Hopf algebras — 255
4.7	Strict quantum 2-groups — 259
4.8	Exercises — 271
4.9	Bibliographical notes — 272
5	Crossed modules with geometric structure — 273
5.1	Crossed modules of Lie groups — 273
5.1.1	Smooth outer actions — 273
5.1.2	Extensions of Lie groups — 279
5.1.3	Crossed modules of Lie groups — 288
5.1.4	Significance of the zero class in $H^3(G, Z)$ — 293
5.1.5	The smooth obstruction crossed module — 295
5.1.6	Integration of crossed modules of Lie algebras — 300
5.2	Crossed modules in Malcev theory — 304
5.3	Crossed modules of Lie–Rinehart algebras — 312
5.4	Exercises — 316
5.5	Bibliographical notes — 318
6	Crossed modules of racks — 319
6.1	Racks and related notions — 319
6.1.1	Racks and Leibniz algebras — 319
6.1.2	Racks, Leibniz algebras and rack bialgebras — 327
6.2	Crossed modules of racks — 335

6.3	Crossed modules of rack bialgebras —	341
6.4	Links between the different types of crossed modules —	344
6.4.1	Crossed modules of Lie racks and Leibniz algebras —	345
6.4.2	Crossed modules of rack bialgebras and Leibniz algebras —	347
6.4.3	Crossed modules of racks and rack bialgebras —	350
6.5	Categorical racks —	351
6.5.1	From categories to crossed modules —	351
6.5.2	From crossed modules to categories —	354
6.5.3	Crossed modules of racks and trunks —	356
6.5.4	From crossed modules of racks to trunks —	358
6.6	Topological applications of crossed modules of racks —	359
6.6.1	The rack space of a crossed module of racks —	359
6.6.2	Crossed modules of racks from link coverings —	361
6.7	Exercises —	365
6.8	Bibliographical notes —	366

A Cohomology of groups — 367

A.1	Definitions —	367
A.2	Abelian extensions —	368
A.3	The Lyndon–Hochschild–Serre spectral sequence —	371
A.4	Continuous cohomology —	371

B Cohomology of Lie algebras — 373

B.1	Definitions —	373
B.2	Abelian extensions —	374
B.3	The Hochschild–Serre spectral sequence —	375
B.4	Continuous cohomology —	378

C Cohomology of associative algebras — 379

C.1	Definitions —	379
C.2	Hochschild cohomology —	379
C.3	Square zero extensions —	380

D Lie groups and their cohomology — 383

D.1	Lie groups —	383
D.2	Defining a Lie group structure —	384
D.3	Lie group cohomology —	384

Bibliography — 387

Index — 391
