

Contents

Foreword *xiii*

- 1 New Trends in the Design of Metal Nanoparticles and Derived Nanomaterials for Catalysis 1**
Alain Roucoux and Karine Philippot
 - 1.1 Nanocatalysis: Position, Interests, and Perspectives 1
 - 1.2 Metal Nanoparticles: What Is New? 4
 - 1.3 Conclusions and Perspectives 8
 - References 9

- 2 Introduction to Dynamic Catalysis and the Interface Between Molecular and Heterogeneous Catalysts 13**
Alexey S. Galushko, Alexey S. Kashin, Dmitry B. Eremin, Mikhail V. Polynski, Evgeniy O. Pentsak, Victor M. Chernyshev, and Valentine P. Ananikov
 - 2.1 Introduction 13
 - 2.2 Dynamic Catalysis 14
 - 2.3 Interface Between Molecular and Heterogeneous Catalysts 17
 - 2.3.1 Direct Observation of Nanoparticle Evolution by Electron Microscopy 17
 - 2.3.2 Through the Interface – Detection of Molecular Species by Mass Spectrometry 19
 - 2.3.3 Pervasiveness of Nanoparticles and the Problem of Catalytic Contamination 22
 - 2.3.4 Computational Modeling of Dynamic Catalytic Systems 24
 - 2.3.4.1 Equilibrium of Leaching and Recapture 24
 - 2.3.4.2 Modeling Leaching, Recapture, and Transformations in Solution 25
 - 2.3.5 Nanoparticle Catalysis in Solvent-Free and Solid-State Organic Reactions 27
 - 2.3.6 Applications of the Mercury Test and Other Poisoning Techniques in the Nanoparticle Catalysis Studies 30
 - 2.3.6.1 Catalyst Poisoning Techniques and Typical Poisons 30
 - 2.3.6.2 Mercury Test 31

- 2.3.6.3 Fundamental Limitations of the Catalyst Poisoning Techniques for Dynamic Systems 33
- 2.4 Summary and Conclusions 34
- References 36

Part I Nanoparticles in Solution 43

3 Metal Nanoparticles in Water: A Relevant Toolbox for Green Catalysis 45

Audrey Denicourt-Nowicki, Natalia Mordvinova, and Alain Roucoux

- 3.1 Introduction 45
- 3.2 Protection by Ligands 46
 - 3.2.1 Hydrogenation Reactions 46
 - 3.2.1.1 Phosphorous Ligands 46
 - 3.2.1.2 Nitrogenated Ligands 47
 - 3.2.1.3 Carbon Ligands 49
 - 3.2.2 Suzuki–Miyaura Coupling Reactions 50
 - 3.2.2.1 Nitrogenated Ligands 50
 - 3.2.2.2 Carbonaceous and Phosphorous Ligands 51
- 3.3 Stabilization by Surfactants 51
 - 3.3.1 Hydrogenation Reactions 52
 - 3.3.2 Oxidation Reactions 56
 - 3.3.3 Other Reactions 57
- 3.4 Stabilization by Polymers 58
 - 3.4.1 Hydrogenation Reactions 58
 - 3.4.2 Carbon–Carbon Coupling Reactions 64
 - 3.4.3 Oxidation Reactions 66
- 3.5 Conclusions and Perspectives 67
- References 68

4 Organometallic Metal Nanoparticles for Catalysis 73

M. Rosa Axet and Karine Philippot

- 4.1 Introduction 73
- 4.2 Interests of the Organometallic Approach to Study Stabilizer Effect on Metal Surface Properties 74
- 4.3 Application of Organometallic Nanoparticles as Catalysts for Hydrogenation Reactions 78
 - 4.3.1 Metal Nanoparticles Stabilized with Phosphorus Ligands 78
 - 4.3.2 Metal Nanoparticles Stabilized with N-Heterocyclic Carbenes 80
 - 4.3.3 Metal Nanoparticles Stabilized with Zwitterionic Ligands 82
 - 4.3.4 Metal Nanoparticles Stabilized with Fullerenes 82
 - 4.3.5 Metal Nanoparticles Stabilized with Carboxylic Acids 84
 - 4.3.6 Metal Nanoparticles Stabilized with Miscellaneous Ligands 86
 - 4.3.7 Bimetallic Nanoparticles 88

4.3.8	Supported Nanoparticles	90
4.4	Conclusions	94
	References	95
5	Metal Nanoparticles in Polyols: Bottom-up and Top-down Syntheses and Catalytic Applications	99
	<i>Trung Dang-Bao, Isabelle Favier, and Montserrat Gómez</i>	
5.1	Introduction	99
5.2	Bottom-up Approach: Colloidal Synthesis in Polyols	100
5.2.1	Ethylene Glycol and Poly(ethylene glycol)	100
5.2.2	Glycerol	105
5.2.3	Carbohydrates	108
5.3	Top-down Approach: Sputtering in Polyols	113
5.4	Summary and Conclusions	117
	Acknowledgments	118
	References	118
6	Catalytic Properties of Metal Nanoparticles Confined in Ionic Liquids	123
	<i>Muhammad I. Qadir, Nathália M. Simon, and Jairton Dupont</i>	
6.1	Introduction	123
6.2	Stabilization of Metal Nanoparticles in ILs	124
6.3	Synthesis of Soluble Metal Nanoparticles in ILs	125
6.4	Catalytic Application of NPs in ILs	126
6.4.1	Catalytic Hydrogenation of Aromatic Compounds	127
6.4.2	Coupling Reactions in ILs	130
6.4.3	Hydroformylation in ILs	132
6.4.4	Fischer–Tropsch Synthesis in ILs	133
6.4.5	Catalytic Carbon Dioxide Hydrogenation in ILs	133
6.5	Conclusions	134
	Acknowledgments	135
	References	135
	Part II Supported Nanoparticles	139
7	Nanocellulose in Catalysis: A Renewable Support Toward Enhanced Nanocatalysis	141
	<i>Tony Jin and Audrey Moores</i>	
7.1	Introduction	141
7.2	Nanocellulose-Based Catalyst Design and Synthesis	143
7.2.1	Synthesis of Suspendable, CNC-Based Nanocatalysts	144
7.2.1.1	Unmodified CNCs as a Support for Metal NPs	144
7.2.1.2	Functionalized CNCs as a Support for Metal NPs	145
7.2.2	Nanocellulose-Based Solid Supports for Metal NPs	146
7.2.2.1	CNC-Embedded Supports	146

- 7.2.2.2 Functionalized CNFs as a Support for Metal NPs 147
- 7.2.2.3 Use of CNCs as a Source for Carbon Supports 147
- 7.3 Organic Transformations Catalyzed by Metal NP/nanocellulose Hybrids 148
 - 7.3.1 C–C Coupling Reactions 148
 - 7.3.2 Reduction Reactions 151
- 7.4 Conclusions 154
- References 154

8 Magnetically Recoverable Nanoparticle Catalysts 159

Liane M. Rossi, Camila P. Ferraz, Jhonatan L. Fiorio, and Lucas L. R. Vono

- 8.1 Introduction 159
- 8.2 Magnetic Support Material 161
 - 8.2.1 Magnetite Coated with Silica 163
 - 8.2.2 Magnetite Coated with Ceria, Titania, and Other Oxides 165
 - 8.2.3 Magnetite Coated with Carbon-Based Materials 166
- 8.3 Preparation of Magnetically Recoverable Metal Nanoparticle Catalysts 167
 - 8.3.1 Immobilization of Metal Precursors Before Reduction 167
 - 8.3.2 Decomposition of Organometallic Precursors 170
 - 8.3.3 Immobilization of Colloidal Nanoparticles 172
 - 8.3.4 Influence of Ligands on Catalytic Properties 173
- 8.4 Summary and Conclusions 176
- References 176

9 Synthesis of MOF-Supported Nanoparticles and Their Interest in Catalysis 183

Guowu Zhan and Hua C. Zeng

- 9.1 Introduction 183
- 9.2 General Synthetic Methodologies 185
 - 9.2.1 Catalytic Properties of Metal Nanoparticles 185
 - 9.2.2 Synthetic Strategies of Metal Nanoparticles 187
 - 9.2.2.1 Wet Chemical Reduction Method 187
 - 9.2.2.2 Metal Vapor Condensation/Deposition Method 187
 - 9.2.2.3 Electrochemical Method 188
 - 9.2.2.4 Biosynthesis Method 188
 - 9.2.3 Catalytic Activity and Catalytic Sites of MOFs 188
 - 9.2.4 Porosity of MOFs for Catalysis Applications 189
 - 9.2.5 Synthetic Strategies of MOFs 190
 - 9.2.5.1 Electrochemical Method 191
 - 9.2.5.2 Sonochemical Method 191
 - 9.2.5.3 Microwave Irradiation Method 192
 - 9.2.5.4 Mechanochemical Method 192
 - 9.2.5.5 Synthesis of MOFs in Green Solvents 192
 - 9.2.5.6 Microemulsion Method 193

9.2.5.7	Transformation from Solid Matters to MOFs	193
9.2.6	Integration Methods of MNPs with MOFs	194
9.2.6.1	Preformation of MNPs and Growth of MOFs	195
9.2.6.2	Incorporation of Metal Precursors Followed by in Situ Reduction	197
9.2.6.3	One-pot Integration of MOFs and MNPs	199
9.3	Architectural Designs and Catalytic Applications of MNP/MOF Nanocomposites	200
9.3.1	Zero-Dimensional MNP/MOF Nanocomposites	201
9.3.2	One-Dimensional MNP/MOF Nanocomposites	201
9.3.3	Two-Dimensional MNP/MOF Nanocomposites	203
9.3.4	Three-Dimensional MNP/MOF Nanocomposites	203
9.3.5	Other Representative Structures of MNP/MOF Composites	205
9.3.5.1	Core-Shell/Yolk-Shell Nanostructures	205
9.3.5.2	Sandwich-like Nanostructures	206
9.3.5.3	Formation of Nanoreactors with a Central Cavity	208
9.4	Summary and Conclusions	208
	References	210

10 Silica-Supported Nanoparticles as Heterogeneous Catalysts 215

Mahak Dhiman, Baljeet Singh, and Vivek Polshettiwar

10.1	Introduction	215
10.2	Deposition Methods of Metal NPs	216
10.2.1	Wet Impregnation Method	216
10.2.2	Deposition-Precipitation Method	217
10.2.3	Colloidal Immobilization Method	218
10.2.4	Solid-State Grinding Method	219
10.2.5	Postsynthetic Grafting Method	220
10.3	Application of Silica-Supported NPs in Catalysis	221
10.3.1	Oxidation Reactions	221
10.3.1.1	CO Oxidation	221
10.3.1.2	Alcohol Oxidation	222
10.3.1.3	Hydrolysis of Silane	224
10.3.2	Hydrogenation Reactions	226
10.3.3	Carbon-Carbon (C-C) Coupling Reactions	230
10.4	Conclusion	234
	References	235

Part III Application 239

11 CO₂ Hydrogenation to Oxygenated Chemicals Over Supported Nanoparticle Catalysts: Opportunities and Challenges 241

Qiming Sun, Zhenhua Zhang, and Ning Yan

11.1	Introduction	241
------	--------------	-----

11.2	CO ₂ Hydrogenation into Formic Acid	242
11.3	CO ₂ Hydrogenation to Methanol	247
11.4	CO ₂ Hydrogenation to Dimethyl Ether	250
11.5	Perspectives and Conclusion	252
	Acknowledgment	253
	References	253
12	Rebirth of Ruthenium-Based Nanomaterials for the Hydrogen Evolution Reaction	257
	<i>Nuria Romero, Jordi Creus, Jordi García-Antón, Roger Bofill, and Xavier Sala</i>	
12.1	Introduction	257
12.2	Relevant Figures of Merit	258
12.3	Factors Ruling the Performance of Ru-Based NPs in HER Electrocatalysis	261
12.3.1	Surface Composition	262
12.3.2	Phase Structure and Degree of Crystallinity	265
12.3.3	Influence of the C Matrix or the C-Based Support	266
12.3.4	Influence of Heteroatoms	270
12.3.4.1	Phosphorous	270
12.3.4.2	Metals and Semimetals	272
12.4	Factors Ruling the Performance of Ru-Based NPs in HER Photocatalysis	272
12.5	Summary and Conclusions	274
	Acknowledgments	275
	References	275
13	Nanocatalytic Architecture for the Selective Dehydrogenation of Formic Acid	279
	<i>Ismail B. Baguc, Gulsah S. Kanberoglu, Mehmet Yurderi, Ahmet Bulut, Metin Celebi, Murat Kaya, and Mehmet Zahmakiran</i>	
13.1	Introduction	279
13.2	Monometallic Palladium-Based Nanocatalysts	282
13.3	Bimetallic Palladium-Based Nanocatalysts	286
13.3.1	Bimetallic Pd-Containing Nanocatalysts in the Physical Mixture Form	286
13.3.2	Bimetallic Pd-Containing Nanocatalysts in the Alloy Structure	287
13.3.3	Bimetallic Pd-Containing Nanocatalysts in the Core@Shell Structure	291
13.3.4	Trimetallic Pd-Containing Nanocatalysts	294
13.3.5	Other Pd-Free Nanocatalysts	297
13.4	Summary and Conclusions	301
	Acknowledgments	302
	References	302

Part IV Activation and Theory 307

- 14 Magnetically Induced Nanocatalysis for Intermittent Energy Storage: Review of the Current Status and Prospects 309**
Julien Marbaix, Nicolas Mille, Julian Carrey, Katerina Soulantica, and Bruno Chaudret
- 14.1 Introduction 309
- 14.2 General Context and Historical Aspects 310
- 14.3 Characteristics of the Nanocatalysts Used in Magnetic Hyperthermia 312
- 14.3.1 Metal Oxide Nanomaterials 312
- 14.3.2 Iron (0) Nanoparticles 312
- 14.3.3 Iron Carbide Fe(C) Nanomaterials 312
- 14.3.4 Bimetallic FeNi Nanoparticles 313
- 14.3.5 Bimetallic FeCo Nanoparticles 313
- 14.3.6 CoNi Nanoparticles 314
- 14.4 Catalytic Applications in Liquid Solution and Gas Phase 314
- 14.4.1 Gas-Phase Catalysis 314
- 14.4.1.1 Catalysis Activated by Magnetically Heated Micro- and Macroscaled Materials 314
- 14.4.1.2 Catalysis Activated by Magnetic Heating of Nanoparticles 316
- 14.4.2 Catalytic Reactions in Solution 318
- 14.5 Perspectives 322
- 14.5.1 Stability of the Catalytic Bed During Catalysis by Magnetic Heating 322
- 14.5.2 Thermal Management and Process Chemistry Using Magnetic Heating for Catalytic Applications 322
- 14.6 Perspective of the Integration for Renewable Energy Use 323
- 14.6.1 Interest of Power to Gas and Catalysis Using Magnetic Heating for Renewable Energy Use 323
- 14.6.2 Energy Efficiency and Environmental Considerations of Catalysis by Magnetic Heating 324
- 14.7 Conclusion 326
- References 327
- 15 Sabatier Principle and Surface Properties of Small Ruthenium Nanoparticles and Clusters: Case Studies 331**
Iker del Rosal and Romuald Poteau
- 15.1 Introduction 331
- 15.2 C–H Activation and H/D Isotopic Exchange in Amino Acids and Derivatives 333
- 15.2.1 Reference Activation and Dissociation Energies 333
- 15.2.2 H/D Exchange Mechanism 334
- 15.2.3 Bare Cluster 336
- 15.2.4 Ru₁₃D₁₉ 338
- 15.2.5 Ru₁₃D_n, $n = 6-17$ 338

15.2.6	Short Discussion	338
15.3	Hydrogen Evolution Reaction	340
15.3.1	Introduction	340
15.3.2	4-Phenylpyridine-Protected RuNPs	341
15.3.3	Optimal Ligands for the HER?	344
15.4	Summary	346
15.5	Computational Details	347
