1	Introduction to Atomic Dynamics in Intense Light Fields	1
	Farhad H.M. Faisal	
1.1	Introduction	1
1.2	Historical Background	2
1.3	Virtual Absorption	5
1.4	Generalized Fermi Golden Rule	6
1.5	I^n Law	6
1.6	Above-Threshold Ionization	8
1.7	The Volkov State and KFR-Theory	11
1.8	High Harmonic Generation	16
1.9	Why Only Odd Harmonics?	16
1.10	Tests for the KFR-Model via the Floquet Theory and Experiments	17
1.11	Many-Electron Atomic Systems in Intense Light Fields	20
1.12	Intense-Field Processes in Many-Body Systems	22
1.13	Correlations: Static and Dynamic	22
1.14	Intense-Field Many-Body S -Matrix Theory	23
1.15	Nonsequential Double Ionization	26
1.16	The "CES" Diagram and "Mechanism" of Double Ionization	29
1.17	Comments on Sum-Momentum Distributions	34
1.18	Comments on Multiple Ionization	36
	References	39
2	Foundations of Strong-Field Physics	41
	Howard R. Reiss	
2.1	Introduction	41
2.2	Special Features of Strong-Field Problems	42
2.3	General Quantum Transition Amplitude	45
2.3.1	Preliminaries	45
2.3.2	History of the S -Matrix	46
2.3.3	Derivation of the Transition Amplitude	47

2.4	Gauge Transformations	49
2.4.1	A Partial List of Gauge-Related Mistakes	54
2.4.2	Does a Laboratory Gauge Exist?.....	55
2.5	SFA (Strong-Field Approximation)	57
2.5.1	SFA Rates	58
2.5.2	SFA Spectra	60
2.5.3	SFA Momentum Distributions	63
2.6	Tunneling/Multiphoton Misconception	69
2.6.1	Tunneling and the Keldysh Parameter	71
2.7	Time Domains and Rescattering.....	73
2.8	Relativistic Effects	78
	References.....	83
3	High Intensity Physics Scaled to Mid-Infrared	
	Wavelengths	85
	Pierre Agostini	
3.1	Introduction.....	85
3.2	Mid-Infrared Sources at OSU.....	86
3.3	MIR Strong Field Ionization	87
3.3.1	Keldysh Parameter.....	87
3.3.2	Keldysh Scaling	90
3.3.3	Strong Field Ionization Photoelectron Energy Spectra	90
3.3.4	Wavelength Scaling of the Photoelectron Spectra	92
3.3.5	Wavelength Scaling of the Ionization Rate: TDSE vs. Tunneling Theory	94
3.3.6	Intensity Scaling of the Rescattering Plateau.....	94
3.3.7	Wavelength Scaling of the Rescattering Plateau	96
3.3.8	Ionization of Scaled Systems	96
3.3.9	The Low Energy Structure in the Photoelectron Energy Spectra.....	98
3.4	MIR High Harmonics and Attophysics	98
3.4.1	Scaling of the Harmonic Cutoff.....	100
3.4.2	Scaling of the Group Delay Dispersion.....	100
3.4.3	Scaling of the Harmonic Yield	105
3.5	Tomographic Reconstruction of Molecular Orbitals	106
	References.....	108
4	How Do Molecules Behave in Intense Laser Fields?	
	Theoretical Aspects.....	111
	Hirohiko Kono	
4.1	Introduction.....	111
4.2	Electronic and Vibrational Dynamics of H_2^+ in a Near-IR Field	112
4.3	Time-Dependent Adiabatic State Approach and Its Application to Large Amplitude Vibrational Motion of C_{60} Induced by Near-IR Fields	115

4.4	Bond Dissociation Dynamics of Ethanol: Branching Ratio of C–C and C–O Dissociation	130
