| HFOT .....                               | 46 |

## Hybride Beatungsmodi

|                                |    |
|--------------------------------|----|
| Dynamisches BiLevel .....      | 48 |
| Duales BiLevel .....           | 50 |
| Flexibles BiLevel .....        | 52 |
| Volumenadaptives BiLevel ..... | 54 |
| Dynamisches BiLevel ST .....   | 56 |
| Duales BiLevel ST .....        | 58 |

## Closed-Loop-Beatungsmodi

|                       |    |
|-----------------------|----|
| WOBOV .....           | 60 |
| ALPV .....            | 62 |
| INTELLiVENT-ASV ..... | 64 |
| SmartCare .....       | 66 |
| Automode .....        | 67 |

## Messwerte, Indizes

|                                                               |    |
|---------------------------------------------------------------|----|
| P01: Okklusionsdruckmessung .....                             | 68 |
| RSBI: Rapid Shallow Breathing Index .....                     | 69 |
| PEEPi: Intrinsischer PEEP .....                               | 70 |
| Intrinsische PEEP-Messung bei spontanatmenden Patienten ..... | 71 |
| Inflektionspunkte: LIP / UIP / PMC .....                      | 72 |
| C20/C -Index .....                                            | 73 |
| TPP exp: endexpiratorischer transpulmonaler Druck .....       | 74 |
| TPP insp: endinspiratorischer transpulmonaler Druck .....     | 74 |
| $\Delta$ Peso: Ösophagusdruckamplitude .....                  | 75 |
| $\Delta$ Pes/ $\Delta$ Paw (Baydur-Test) .....                | 75 |
| Erkennen von Patienten-Respirator-Asynchronien .....          | 76 |
| PTP: Pressure Time Product .....                              | 77 |
| RCexp: Expiratorische Zeitkonstante .....                     | 78 |
| Intraabdominelles Druckmonitoring (IAP) .....                 | 79 |
| WOB: Work of Breathing .....                                  | 80 |
| POB: Power of Breathing .....                                 | 81 |
| MIP: Maximum Inspiratory Pressure .....                       | 82 |
