About the book — V

Chapter 1

Green chemistry: introduction and principles — 1

- 1.1 Introduction and need — 1
- 1.2 Green chemistry importance — 2
 - 1.2.1 Green olefin metathesis — 2
 - 1.2.2 Use of green olefin metathesis technology to form cold water detergents — 2
 - 1.2.3 Medicine via green technology — 4
 - 1.2.4 Computer chips involving supercritical CO₂ — 4
 - 1.2.5 Biodegradable plastics — 5
 - 1.2.6 Water-based acrylic-alkyd paints with low VOC — 5
- 1.3 The 12 principles of green chemistry — 6
 - 1.3.1 Waste prevention — 6
 - 1.3.2 Atom economy — 7
 - 1.3.3 Less hazardous chemical synthesis — 9
 - 1.3.4 Designing safer chemicals — 10
 - 1.3.5 Safer solvents and auxiliaries — 11
 - 1.3.6 Design for energy efficiency — 11
 - 1.3.7 Use of renewable feedstocks — 12
 - 1.3.8 Reduce derivatives — 13
 - 1.3.9 Catalysis — 15
 - 1.3.10 Design for degradation — 15
 - 1.3.11 Real-time pollution prevention — 16
 - 1.3.12 Inherently safer chemistry for accident prevention — 17
- 1.4 Designing of green synthesis — 17
- References — 19

Chapter 2

Designing a green synthesis — 21

- 2.1 Introduction — 21
- 2.2 Chemical synthesis — 21
- 2.3 Designing a green synthesis using these principles — 22
- 2.4 Prevention of waste/byproducts — 23
 - 2.4.1 Maximum incorporation of the materials used in the process into the final products (atom economy) — 24
 - 2.4.2 Atom economy — 24
- 2.5 Prevention/minimization of hazardous/toxic products — 30
- 2.6 Designing safer chemicals: different basic approaches — 31

- 2.7 Applications of green chemistry in organic synthesis — **33**
- 2.8 Selection of appropriate auxiliary substances (solvents, separation agents) — **34**
- 2.8.1 Green solvents — **34**
- 2.8.2 Solventless process — **35**
- 2.8.3 Immobilized solvents and ionic liquids — **36**
- 2.9 Energy requirements for reactions — **37**
- 2.9.1 Use of microwaves — **37**
- 2.9.2 Ultrasonic energy — **38**
- References — **38**

Chapter 3

Microwave-assisted green synthesis — 39

- 3.1 Introduction — **39**
- 3.1.1 Microwave-assisted reactions in water — **39**
- 3.2 Microwave-assisted reactions in organic solvents — **42**
- 3.2.1 Esterification — **42**
- 3.2.2 Fries rearrangement — **43**
- 3.2.3 Ortho ester Claisen rearrangement — **44**
- 3.2.4 Diels Alder Reaction — **44**
- 3.2.5 Decarboxylation — **45**
- 3.2.6 Alkylation — **46**
- 3.2.7 Oxidation–reduction or redox reactions — **47**
- 3.2.8 Reduction of aryl halide — **48**
- 3.2.9 Coupling reactions — **48**
- 3.2.10 Cannizaro reaction — **50**
- References — **52**

Chapter 4

Solvent-free green synthesis — 53

- 4.1 Solid-state microwave-assisted reactions or solvent-free reactions — **53**
- 4.1.1 Aromatic nucleophilic substitutions — **53**
- 4.1.2 Deacetylation — **54**
- 4.1.3 Oxidation — **55**
- 4.1.4 N-Alkylation — **56**
- 4.1.5 O-Alkylation — **56**
- 4.1.6 Reduction — **56**
- 4.1.7 Solid-state microwave-assisted Fries rearrangement — **58**
- 4.2 Protection and deprotection in organic synthesis reactions — **58**
- 4.2.1 Deprotection — **59**
- 4.3 Saponification of esters — **60**

4.4	Ultrasound-assisted green synthesis —	60
4.4.1	Esterification —	61
4.4.2	Saponification —	61
4.4.3	Hydrolysis —	62
4.4.4	Substitution reactions —	62
4.4.5	Alkylation —	62
4.4.6	Oxidation —	64
4.4.7	Reduction —	64
4.4.8	Coupling reactions —	65
4.4.9	Reformatsky reaction —	65
	References —	66

Index —	67
