Preface *xiii*

Acknowledgment *xv*

Part I Design and Characterization of Conjugated Polymer Nanostructures 1

1 Fundamentals of Conjugated Polymer Nanostructures 3

Thanh-Hai Le and Hyeonseok Yoon

- 1.1 Introduction 3
- 1.2 Electronic and Electrical Properties 4
 - 1.2.1 Conductive Mechanism 4
 - 1.2.1.1 Inherent Molecular Structure 4
 - 1.2.1.2 Doping and Band Structure Evolution 5
 - 1.2.2 Charge Carrier Transport Models 9
 - 1.2.3 Temperature Dependence 13
- 1.3 Electrochemical Properties 16
 - 1.3.1 Reversible Oxidation/Reduction Process and Charge Storage Behavior 16
 - 1.3.2 Swelling and De-swelling Behavior 20
 - 1.3.3 Electrochromism 22
- 1.4 Optical Properties 23
 - 1.4.1 Band Gap of Conjugated Polymers 23
 - 1.4.2 Absorption and Emission 27
 - 1.4.3 Coherent Exciton Diffusion and Energy Transfer 30
- 1.5 Unique Properties at the Nanoscale 33
- 1.6 Conclusion 34
- References 35

2 Chemical Synthesis of Conducting Polymers Nanostructures 43

Srabanti Ghosh and Dipanwita Majumdar

- 2.1 Introduction 43

2.2	Template-Based Synthesis	44
2.2.1	Hard-Template Method	44
2.2.2	Soft-Template Method	46
2.3	Template-Free Synthesis	53
2.3.1	Self Assembly via Interfacial Polymerization	54
2.3.2	Post-synthetic Self-assembly Process	57
2.3.3	Wet Spinning Process	58
2.3.4	Melt Spinning	59
2.3.5	Dry Spinning	59
2.3.6	Electrospinning	60
2.3.7	Seeding Approach	61
2.3.8	Whisker Method of Polymer Synthesis	63
2.3.9	Mixed-Solvent Technique	64
2.3.10	Reprecipitation Technique	64
2.4	Conducting Polymer Hydrogels	64
2.5	Nanolithography	67
2.5.1	Dip-Pen Nanolithography (DPN)	67
2.5.2	Nanoimprint Lithography	69
2.6	Conclusion and Future Prospects	71
	References	72
3	Template-Free Synthesis of Nanostructured Conjugated Polymer Films	85
	<i>Gabriela Ramos Chagas, Thierry Darmanin, and Frédéric Guittard</i>	
3.1	Introduction	85
3.2	Template-Free Synthesis	86
3.2.1	Electrochemical Polymerization	86
3.2.2	Electrospinning	96
3.2.3	Vapor Phase Polymerization	100
3.2.4	Plasma Polymerization	103
3.3	Conclusions	105
	References	106
4	Use of High Energy Radiation for Synthesis and Kinetic Study of Conjugated Polymers	117
	<i>Teseer Bahry, Zhenpeng Cui, and Samy Remita</i>	
4.1	Recent Advancements Toward Facile Preparation of Processable CPs	117
4.2	Preface to Radiation Induced Oxidative Polymerization of CPs Nanostructures in Aqueous Solutions	118
4.2.1	Studying Kinetic Mechanism of HO [•] -Induced EDOT Polymerization in Aqueous Solution	120

4.2.2	Gamma-Radiation Induced Oxidative Polymerization of EDOT in Aerated Aqueous Solutions at Neutral pH	124
4.2.3	Effect of Oxidizing Species on Gamma-Radiation-Induced Synthesis of PEDOT	126
4.2.4	Extension of the Radiolytic Procedure to the Synthesis of Polypyrrole (PPy) Nanostructures	131
4.2.5	Effect of pH on the Polymerization of EDOT Monomers	132
4.3	Radiation-Induced Synthesis of CPs Nanostructures by Reduction-Polymerization Route	134
4.4	Radiation-Induced Synthesis of CPs/Metal Nanocomposites	137
4.5	Toward Radiation-Induced Synthesis of CPs Nanostructures in Organic Solvents	141
4.6	The Electrical and Physical Properties of Radiosynthesized CPs	145
4.6.1	CPs Chain Lengths	146
4.6.2	Optical and Electronic Band Gaps of CPs	147
4.6.3	Electrical Conductivities of CPs	147
4.6.4	Thermal Properties of CPs	148
4.7	Comparative Studies Between Radiolytic Methodology and Conventional Methods	149
4.8	Summary	150
	References	151

5 Conjugated Polymer Nanostructures: Characterization 159

Samim Sardar and Srabanti Ghosh

5.1	Introduction	159
5.2	Morphological Characterization	161
5.2.1	Transmission Electron Microscopy (TEM)	161
5.2.1.1	Cryo-TEM	163
5.2.1.2	Scanning Transmission Electron Microscopy (STEM)	166
5.2.1.3	Scanning Tunneling Microscopy (STM)	170
5.2.2	Field Emission Scanning Electron Microscopy (FESEM)	172
5.2.3	Atomic Force Microscopy (AFM)	173
5.3	Surface Characterization	176
5.3.1	Scanning Kelvin Probe Microscopy (SKPM) and Kelvin Probe Force Microscopy (KPFM)	176
5.3.2	X-Ray Photoelectron Spectroscopy (XPS)	178
5.4	Electrochemical Characterization	181
5.5	Spectroscopic Characterization	185
5.5.1	UV-Vis and Photoluminescence Spectroscopy	185
5.5.2	Fourier Transform Infrared Spectroscopy	190
5.5.3	Nuclear Magnetic Resonance Spectroscopy	191
5.6	Other Techniques	191
5.7	Conclusion	196
	References	196

Part II Conjugated Polymer Nanostructures for Solar Energy Conversion and Environmental Protection 205

- 6 Conjugated Polymer Nanostructures for Catalysts Support in Fuel Cells Application 207**
Srabanti Ghosh and Rajendra N. Basu
 - 6.1 Introduction 207
 - 6.2 Conducting Polymer Nanostructures for Electrocatalysts Support 209
 - 6.2.1 Metal Catalysts Deposited on Conducting Polymer Nanostructures 211
 - 6.2.2 Metal Catalysts Deposited on Modified Conducting Polymer Nanostructures 219
 - 6.3 Conclusion 224
 - References 225
- 7 Conjugated Polymer Nanostructures for Photocatalysis 233**
Srabanti Ghosh
 - 7.1 Introduction 233
 - 7.2 Application of Conjugated Polymer Nanostructures as Photocatalysts 235
 - 7.2.1 Photocatalysis for Environmental Protection and Organic Pollutant Degradation 235
 - 7.2.2 Photocatalysis for Water Splitting and H₂ Generation 248
 - 7.2.3 Conjugated Polymer Nanostructures for CO₂ Photo Reduction 254
 - 7.3 Conclusion 256
 - References 256
- 8 Conjugated Polymer-Based Nanocomposites as Photocatalysts 267**
Rituporn Gogoi, Sunil Dutt, and Prem F. Siril
 - 8.1 Introduction 267
 - 8.2 General Methods of Synthesis of Conjugated Polymer Nanocomposites 268
 - 8.3 Classification of the Approaches for the Synthesis of Conjugated Polymer Nanocomposites 269
 - 8.3.1 Template Assisted Methods 270
 - 8.3.2 Template Free Method 270
 - 8.4 Fundamental Principles of Photocatalysis 271
 - 8.5 Conjugated Polymer Nanocomposites and Current Challenges in Their Photocatalysis 272
 - 8.6 Band Structure Engineering in Conjugated Polymer Nanocomposites 273
 - 8.6.1 Solid–Solid (S–S) Interface 274
 - 8.6.1.1 SC–SC Heterojunction 274
 - 8.6.1.2 Semiconductor–Metal (SC–M) Heterojunction 279
 - 8.6.2 Solid–Liquid Interface 281

8.7	Photocatalytic Applications of Conducting Polymer Nanocomposites	283
8.7.1	Water Remediation Using CPNCs	284
8.7.1.1	Inorganic Semiconductor Based CP Nanocomposites as Photocatalysts for Water Remediation	284
8.7.1.2	Plasmonic Metal-Based CPNCs	286
8.7.1.3	Conjugated Polymer-Conjugated Polymer-Based Nanocomposites	286
8.7.2	Hydrogen Generation Application	287
8.7.3	Other Applications of CP Nanocomposites	289
8.8	Conclusion	290
	References	290

9 Nanostructured Conjugated Polymer for Solar Cell

Applications

Emilie Dauzon, Guillaume Noirbent, Cedric Vancaeyzeele, Thanh-Tuan Bui, Frederic Dumur, and Fabrice Goubard

9.1	Introduction	297
9.2	Architectures of Organic Cells	300
9.2.1	Schottky Cell	300
9.2.2	Bilayer Structure	300
9.2.3	Bulk Heterojunctions	301
9.3	Chemical Strategy for Developing the Nanostructure of the Active Layer	301
9.3.1	Block Copolymers	301
9.3.2	Polymer Nanowires	305
9.3.3	Polymer Nanoparticles (PNPs)	309
9.3.3.1	Synthesis of PNPs via Precipitation Methods	309
9.3.4	Polymer Nanofiber (PNF)	311
9.4	Physical Strategies for Fabricating Polymer Nanostructures	316
9.4.1	Template Methods	316
9.4.1.1	Miniemulsion	321
9.4.1.2	Microemulsion	332
9.4.2	Porous Inorganic Materials	334
9.4.3	Electropolymerization	337
9.4.3.1	Poly(thiophenes)	338
9.4.3.2	Poly(carbazole)	342
9.4.3.3	Poly(triphenylamine)	343
9.5	Conclusion	344
	References	344

Part III Conjugated Polymer Nanostructures for Energy Storage

10 Conjugated Polymer Nanostructures for Electrochemical Capacitor and Lithium-Ion Battery Applications

Thanh-Hai Le and Hyeonseok Yoon

10.1	Introduction	359
10.2	Terminology and Differences Between ECs and LIBs	360
10.3	CPNs for ECs	362
10.3.1	Fundamentals of ECs	362
10.3.2	Pseudocapacitive CPNs in ECs	366
10.3.2.1	Conventional Heterocyclic CPNs	366
10.3.2.2	Microporous Conjugated Polymers	372
10.3.3	Conjugated Polymer Nanocomposites	374
10.4	CPNs for LIBs	379
10.4.1	Fundamentals of LIBs	379
10.4.2	Conjugated Polymer Nanostructures for LIBs	381
10.4.2.1	Conjugated Polymers as Fully Active Electrode Materials for LIBs	382
10.4.2.2	Conjugated Polymers as Protective/Network Layers for LIBs	384
10.4.2.3	Heterocyclic Conjugated Polymer Nanostructures and Their Composites for LIBs	386
10.5	Conclusion	391
	References	392

11 Conjugated Polymer Based Nanocomposites as Electrode Materials 401

Saptarshi Dhibar, Puspendu Das, Sanjoy Mondal, Utpal Rana, and Sudip Malik

11.1	Introduction	401
11.1.1	Polypyrrole	402
11.1.2	Polyaniline	402
11.1.3	Polythiophene	403
11.2	Conducting Polymer Based Electrode Materials	405
11.2.1	Polypyrrole	407
11.2.1.1	Different Nano-Architectures of Polypyrrole	407
11.2.1.2	Polypyrrole Nanostructures as Electrode Materials	408
11.2.1.3	Graphene and CNT Based Polypyrrole Nanocomposites	409
11.2.2	Polyaniline	416
11.2.2.1	Different Nano-Architectures of Polyaniline	416
11.2.2.2	Effect of Dopant Size in Nanostructure	420
11.2.2.3	Polyaniline Nanostructures as Electrode Materials	420
11.2.2.4	Graphene and CNT Based Polyaniline Nanocomposites	423
11.2.3	Polythiophene	426
11.2.3.1	Different Nano-Architectures of Polythiophene	430
11.2.3.2	Polythiophene Nanostructures as Electrode Materials	430
11.2.3.3	Graphene and CNT Based Polythiophene Nanocomposites	432
11.3	Summary	433
	Acknowledgment	435
	References	436

12	Conducting Polymers Nanowires with Carbon Nanotubes or Graphene-Based Nanocomposites for Supercapacitors Applications	445
	<i>Thuan Nguyen Pham Truong, Philippe Banet, and Pierre-Henri Aubert</i>	
12.1	Introduction on Electrochemical Storage Using Electronic Conducting Polymers (ECP)	445
12.1.1	Electronic Conducting Polymers (ECP)	446
12.1.2	Synthesis of ECPs	447
12.1.3	Electrochemical Storage Properties of ECPs	448
12.1.4	Morphology and Nanostructuration of ECP	449
12.2	Porous Carbon-Based Nanocomposites	453
12.2.1	Polypyrrole/Porous Carbon Nanocomposites	454
12.2.2	Polyaniline/Porous Carbon Nanocomposites	455
12.2.3	Polyethylenedioxythiophene/Porous Carbon Nanocomposites	456
12.3	CNT-Based Nanocomposites	457
12.3.1	ECP with Entangled CNT Composites	458
12.3.2	ECP with Vertically Aligned CNT Composites	460
12.4	Graphene-Based Nanocomposites	465
12.4.1	Polymer/Graphene Composites	466
12.4.2	Polyaniline/Graphene	466
12.4.3	Polypyrrole/Graphene	471
12.4.4	Thiophene-Based Polymers/Graphene	478
12.5	Conclusion and Outlook	482
	References	485
	Index	499
