Preface to the second edition — VII

Preface to the first edition — XI

1	Basic theory of Lie algebras — 1
1.1	Main definitions — 1
1.1.1	Rings, modules, and algebras — 1
1.1.2	The anticommutativity law — 2
1.1.3	The Jacobi identity. Lie ring — 2
1.1.4	Some other classes of rings — 3
1.1.5	Right-normed products — 3
1.1.6	Derivation — 3
1.1.7	Extension of the base ring — 3
1.1.8	Finite-dimensional algebras — 4
1.2	Examples of Lie algebras — 4
1.2.1	Lie algebra of an associative algebra — 4
1.2.2	Lie algebra of endomorphisms of a k -module — 5
1.2.3	Lie algebras of derivations — 6
1.3	Derivation algebra of a Lie algebra — 7
1.3.1	Inner derivations — 7
1.3.2	Center of a Lie algebra — 7
1.4	Semidirect product — 8
1.4.1	Cartesian product of rings — 8
1.4.2	Direct product — 9
1.4.3	Direct sum — 9
1.4.4	Semidirect product of Lie algebras — 10
1.4.5	Split extension of algebras — 11
1.5	Series of ideals in Lie algebras — 12
1.5.1	Products of ideals — 12
1.5.2	Lower central series — 12
1.5.3	Derived series — 13
1.5.4	Centralizer — 13
1.5.5	Upper central series — 14
1.6	Modules — 15
1.6.1	Representation of a Lie algebra — 15
1.6.2	Module over a Lie algebra — 15
1.6.3	Chief series — 17
1.6.4	Semisimple series — 17
1.6.5	Modules and extensions — 19

1.6.6	Lie algebra cohomology. Nonsplit extensions —	20
1.6.7	Basis of a Lie module —	22
1.7	Nilpotent Lie algebras —	24
1.7.1	Equivalent definitions of nilpotency —	24
1.7.2	Fratini subalgebra —	25
1.7.3	Lie algebras of nilpotent endomorphisms —	27
1.7.4	Triangular form —	28
1.7.5	Some sufficient conditions for the nilpotency —	29
1.8	Solvable Lie algebras —	30
1.8.1	Examples and properties of solvable Lie algebras —	31
1.8.2	Engel Lie algebras —	33
1.8.3	Example (P. M. Cohn) —	34
1.9	Fratini theory for Lie algebras of finite length —	37
1.9.1	An example —	37
1.9.2	Solvable and nilpotent radicals. Socle —	38
1.10	Graded algebras —	40
1.10.1	Definition of graded algebras —	40
1.10.2	Examples —	40
1.10.3	Homogeneous subalgebras —	41
1.10.4	Filtration —	41
1.11	Restricted Lie algebras —	42
1.11.1	Example —	42
1.11.2	Definition of restricted Lie algebra —	43
1.11.3	Examples —	44
1.12	Exercises —	45
1.13	Comments —	48
2	Free Lie algebras —	49
2.1	Lie algebras satisfying identical relations —	49
2.1.1	Nonassociative polynomials —	49
2.1.2	Algebras satisfying an identity (PI-algebras) —	49
2.1.3	Lie algebras with identities. Examples —	49
2.2	Free Lie algebra —	51
2.2.1	Free groupoid —	51
2.2.2	Multidegree —	52
2.2.3	Free algebra —	52
2.2.4	Free Lie algebras —	53
2.2.5	Free associative algebra —	55
2.2.6	Identities —	55
2.3	Bases of free Lie algebras —	56
2.3.1	Basic family —	56

2.3.2	Canonical homomorphism from $L(X)$ into $A(X)$ —	57
2.3.3	Arranging brackets on words —	58
2.3.4	Hall's basis —	60
2.3.5	Shirshov's basis —	60
2.4	Subalgebras of free Lie algebras —	62
2.4.1	Example —	62
2.4.2	Free generators for some ideals —	63
2.5	Universal enveloping algebra —	66
2.5.1	Definition —	66
2.5.2	Basis for the universal enveloping algebra —	67
2.5.3	Filtration on $U(G)$ —	69
2.5.4	G -modules and $U(G)$ -modules —	69
2.5.5	Derivations of free Lie algebras —	70
2.5.6	Injective modules —	71
2.6	Free product —	72
2.6.1	Presenting algebras in terms of generators and defining relations —	72
2.6.2	Free product of Lie algebras —	73
2.6.3	Universal enveloping algebra of the free product of Lie algebras —	74
2.6.4	Basis for free product —	75
2.6.5	Subalgebras of free products —	76
2.7	Free restricted Lie algebra —	77
2.7.1	Definition and construction —	77
2.7.2	Elementary transformations —	77
2.7.3	p -Reduced set —	78
2.8	Exercises —	80
2.9	Comments —	82
3	Homogeneous structure of free Lie algebras —	83
3.1	Introduction —	83
3.1.1	$L(X)$ as GL - and S_n -module —	83
3.1.2	Möbius function —	84
3.1.3	Witt's formula —	85
3.2	Representations of the symmetric group —	86
3.2.1	Necessary prerequisites —	86
3.2.2	Constructing the idempotents —	87
3.2.3	Lexicographic ordering —	88
3.2.4	Decomposing kS_n —	91
3.2.5	Some formulas —	92
3.3	Frobenius algebras and their modules —	93
3.3.1	Definition and examples —	93
3.3.2	Symmetric Frobenius algebras —	94

3.3.3	Submodules in M and ideals in R_M —	96
3.3.4	Operators of symmetrization —	98
3.3.5	The dimension formula —	100
3.4	Structure of $GL(V)$ -module $L_n(V)$ —	100
3.4.1	Categories, after Cohn [93] —	100
3.4.2	Functors L_n and C_n —	101
3.4.3	Operators l_n and c_n —	102
3.4.4	Frobenius reciprocity theorem —	106
3.4.5	Functor L_n in the case of a field of characteristic zero —	107
3.5	Exercises —	110
3.6	Comments —	110
4	Varieties of Lie algebras —	111
4.1	Identical relations and varieties —	111
4.1.1	Definition of variety —	111
4.1.2	Free algebra of a variety —	111
4.1.3	Examples of varieties. Notation —	113
4.2	Multihomogeneous varieties. Linearization —	114
4.2.1	Multihomogeneous varieties —	114
4.2.2	Partial and complete linearization —	117
4.2.3	Some additional definitions —	117
4.2.4	Free algebra of a multihomogeneous variety —	119
4.2.5	Independent system of identities —	120
4.3	Product varieties —	121
4.3.1	Definition and description of identities in the product variety —	121
4.3.2	Indecomposable varieties —	125
4.4	Embedding theorems —	125
4.4.1	Wreath product —	125
4.5	Free algebras of varieties. Identities —	128
4.5.1	Basic rank of variety —	128
4.5.2	Exceptional cases —	131
4.6	Free algebras of varieties. Subalgebras —	134
4.6.1	Definition of Schreier variety —	134
4.7	Metabelian varieties —	139
4.7.1	Bases of free metabelian algebras —	139
4.8	Young diagrams and identities —	143
4.8.1	Module P_n —	143
4.8.2	Polynomials $f_{\tau d}$ and $g_{\tau d}$ —	144
4.8.3	Structure of P_n where n is small —	145
4.8.4	Lattices of varieties —	147
4.8.5	Center-by-metabelian varieties of Lie algebras —	148

4.8.6	Numerical series related to varieties —	149
4.8.7	Passing from P_n to P_{n+1} —	152
4.9	Quasivarieties —	153
4.9.1	Filtered product —	153
4.9.2	Quasiidentities and quasivarieties —	153
4.10	Exercises —	154
4.11	Comments —	156
5	Finite basis problem —	159
5.1	Statement of the problem —	159
5.1.1	Dependence on the base ring —	159
5.1.2	Axiomatic rank of variety —	159
5.1.3	Specht variety —	160
5.1.4	Finite basis property and operations on the varieties —	161
5.2	Partially well-ordered sets —	164
5.2.1	Definition —	164
5.2.2	Ordering by divisibility —	165
5.2.3	A generalization of Hilbert's basis theorem —	167
5.3	Partially well-ordered sets. Applications —	168
5.3.1	Variety N_2A —	169
5.3.2	Variety $N_cA \cap N_2N_c$ —	172
5.4	Examples of varieties which are not finitely based —	175
5.4.1	Lie algebras A_n and their derivations —	176
5.4.2	Lie algebras C_n —	177
5.4.3	Lie algebras C_n (infinite field case) —	179
5.4.4	Lie algebra L with no finite basis for its identities —	180
5.4.5	Remark —	181
5.5	Finite basis problem over zero characteristic fields —	181
5.5.1	Capelli identities —	181
5.5.2	Variety N_cA over a field of characteristic zero —	183
5.6	Identities of Lie algebra $\mathfrak{sl}(2, k)$ —	185
5.6.1	Weak identities —	185
5.6.2	Some identities of Lie algebra $\mathfrak{sl}(2, k)$ —	187
5.6.3	Free pair —	192
5.6.4	Nilpotent elements in the free pair —	193
5.7	Exercises —	195
5.8	Comments —	195
6	Special Lie algebras: structure, identities, and applications —	197
6.1	Some results on associative PI-algebras —	197
6.1.1	Definitions —	197

6.1.2	The notion of the height —	198
6.1.3	Growth of varieties of associative algebras —	199
6.1.4	Tensor product of k -algebras —	200
6.2	Some further results on Lie algebras —	201
6.2.1	Definitions —	201
6.2.2	Structure of a finite-dimensional semisimple Lie algebra over an algebraically closed field of characteristic zero —	202
6.2.3	Finite-dimensional representations —	203
6.2.4	Proof of Ado–Iwasawa’s theorem in the case where k is a field of characteristic $p > 0$ —	204
6.2.5	Simple modules in the zero characteristic case —	204
6.3	General results on special Lie algebras —	205
6.3.1	Definition and examples —	205
6.3.2	Heredity —	206
6.3.3	Adjoint associative algebra —	206
6.3.4	Examples —	209
6.4	Special Lie algebras over zero characteristic fields —	210
6.4.1	Ado’s theorem for special Lie algebras —	210
6.4.2	Solvable ideals in special Lie algebras over fields of characteristic zero —	212
6.4.3	Main theorem on finitely generated solvable special Lie algebras —	213
6.5	Identities of special Lie algebras over the fields of characteristic zero —	218
6.5.1	Special varieties of Lie algebras —	218
6.5.2	Commutators of special varieties —	220
6.5.3	The codimension series of a special variety —	220
6.6	The universal enveloping algebra of a finite-dimensional Lie algebra. Some results and applications —	221
6.6.1	Endomorphisms of simple G -modules —	221
6.6.2	Simple G -module in the case where the base field is of prime characteristic —	223
6.6.3	Residually finite Lie algebras —	224
6.6.4	Examples —	225
6.6.5	Residual properties and wreath products —	226
6.7	Identities of the universal enveloping algebra —	227
6.7.1	Description of the universal envelopes with identity in the case $\text{char } k = 0$ —	227
6.8	Application: description of Lie algebras all of whose irreducible representations have finite bounded degree —	237
6.8.1	Proofs of Theorem 6.41 and Proposition 6.63 —	239
6.9	Description of Lie superalgebras whose universal enveloping algebra is a PI-algebra —	240

6.9.1	Main definitions — 240
6.9.2	Proving the sufficiency part in Theorem 6.67 — 241
6.9.3	Proving the necessity in the case where $[L_1, L_1] = \{0\}$ — 241
6.9.4	Proof of necessity in the case where L_1 is a trivial L_0 -module — 244
6.9.5	Proof of necessity in the general case — 245
6.10	Exercises — 246
6.11	Comments — 247
7	Identities in finite Lie algebras — 249
7.1	Some finiteness conditions — 249
7.2	A characterization of the variety generated by a finite Lie algebra — 253
7.2.1	Class $\mathbf{C}(f, m, c)$ — 253
7.3	Critical algebras — 255
7.3.1	Definition — 255
7.3.2	Minimal representation — 256
7.4	Critical algebras in $\mathbf{C}(f, m, c)$ — 258
7.4.1	Nilpotent radical of finite Lie algebra — 258
7.5	Variety $\mathbf{V}^{(n)}$ — 260
7.5.1	Definition — 260
7.6	Chief centralizers and maximal subvarieties — 263
7.6.1	Formula $\mathcal{F}_{d,s}^V$ — 264
7.7	Locally finite varieties of Lie algebras — 267
7.7.1	Cross varieties — 267
7.7.2	An approach to the classification of just-non-Cross varieties of Lie algebras — 268
7.7.3	An example of a solvable just-non-Cross variety of Lie algebras over a finite field of characteristic $p > 0$ — 269
7.7.4	Structure of free algebra of $\mathbf{M}$ — 271
7.8	Description of solvable just-non-Cross varieties — 275
7.8.1	Generating sequence of a just-non-Cross variety — 275
7.8.2	First principal reduction of the generating sequence of a solvable just-non-Cross variety — 277
7.8.3	The case of subvarieties in $\mathbf{AN}_c$ — 278
7.8.4	Second principal reduction of the generating sequence of a solvable just-non-Cross variety — 280
7.8.5	Main theorem on solvable just-non-Cross varieties of Lie algebras over a finite field — 281
7.8.6	Class $\mathbf{S}_l(f, c)$ — 283
7.9	Skeletons of locally finite varieties — 283
7.9.1	Definition — 283
7.9.2	Variety $\mathbf{M}_n$. Class $\mathcal{G}(n, r, s)$ — 284

7.9.3	Identities $w_{c,l}$ — 285
7.9.4	Splitting algebras in $\mathcal{G}(n, r, s) \cap \mathbf{M}_n$ — 287
7.10	Exercises — 290
7.11	Comments — 291
8	Applications to group theory — 293
8.1	Constructing a group of a Lie algebra — 293
8.1.1	Projective limit — 293
8.1.2	Completion in one class of topological algebras — 293
8.1.3	Completion of graded algebras — 295
8.1.4	Topology on free associative algebras and free Lie algebras. Friedrichs' criterion — 295
8.1.5	Magnus' group — 296
8.1.6	Group associated with complete topological Lie algebra — 297
8.1.7	Campbell–Hausdorff formula — 298
8.2	Magnus' theory of free groups — 299
8.2.1	Free groups — 299
8.2.2	Commutator calculus — 301
8.2.3	Central filtrations — 302
8.2.4	Lower central series of a free group — 303
8.3	Isomorphism of categories of nilpotent D -groups and of nilpotent rational Lie algebras — 305
8.3.1	Nilpotent groups — 305
8.3.2	Monolithic nilpotent groups — 306
8.3.3	Extraction of roots in nilpotent groups — 307
8.3.4	The group of a nilpotent Lie algebra — 311
8.3.5	Free nilpotent D -group — 311
8.3.6	Lie-type groups — 313
8.4	Varieties of groups of Lie type — 314
8.4.1	Free group of a variety — 314
8.4.2	Product varieties of groups — 317
8.4.3	Wreath products of groups — 317
8.4.4	Magnus groups — 321
8.5	Varieties and Razmyslov's α -function — 323
8.5.1	Construction and relations of one matrix pair — 323
8.5.2	Definition and some properties of Razmyslov's α -function — 325
8.5.3	Bilinear function associated with α -function — 325
8.5.4	Variety associated with an α -function — 328
8.5.5	Some identities in $\mathbf{R}_2$ — 329
8.5.6	An application to Engel Lie algebras — 332
8.6	Lattices of varieties of nilpotent groups — 333

8.6.1	Lattices — 333
8.6.2	Verbal subgroups and lattices — 334
8.6.3	Description of $\mathcal{N}_c^0$ — 336
8.7	Exercises — 337
8.8	Comments — 339
9	Codimension growth — 341
9.1	Exponential growth — 342
9.2	Overexponential growth — 345
9.2.1	Explicit formulae for the complexity functions — 346
9.2.2	Application to codimension functions — 347
9.3	Colength — 348
9.4	Proof of Zaicev's theorem — 349
9.4.1	Various codimensions — 350
9.4.2	A theorem of Razmyslov and multialternating polynomials — 351
9.4.3	Conclusion — 353
9.5	Mishchenko–Zaicev's nonintegrality example — 354
9.6	Exponents of Lie algebras — 361
10	Subalgebra growth in free Lie algebras — 363
10.1	Schreier's formula, with applications — 363
10.1.1	Schreier's formula for free Lie algebras — 363
10.1.2	Growth of finitely generated algebras — 364
10.1.3	Exponential Schreier's formula — 366
10.1.4	Petrogradsky's proof of Schreier's formula — 367
10.2	Growth and cogrowth functions in free Lie algebras — 373
10.2.1	Preliminaries — 377
10.2.2	Relative growth of finitely generated subalgebras — 381
10.2.3	Distortion of finitely generated subalgebras — 383
10.2.4	Some properties of words in infinite alphabets — 385
10.2.5	Cogrowth of subideals — 388
10.2.6	Exponential base of relative growth — 393
10.2.7	More about subalgebras and subideals — 395
11	Identities of graded Lie algebras — 403
11.1	Graded Lie algebras and identities — 403
11.1.1	Graded identities — 403
11.2	Graded algebras where the identity component satisfies an identical relation — 406
11.2.1	Proof of Bahturin–Zaicev's Theorem 11.6 — 407
11.3	Ω -algebras — 416

11.3.1	Graded algebras as Ω -algebras —	417
11.3.2	Graded Ω -algebras —	420
11.4	Further applications of Razmyslov's theorem —	422
11.4.1	Algebras with involution —	422
11.4.2	Superalgebras with involution and superinvolution —	423
11.4.3	Color Lie superalgebras —	423
11.4.4	Trace identities —	424
12	Identities of algebras with action of Hopf algebras —	425
12.1	Hopf algebras —	425
12.2	H -algebras —	426
12.2.1	Free H -algebras —	426
12.2.2	H -algebras, whose invariant subalgebras are PI-algebras —	427
12.3	Proof of Linchenko's theorem —	428
12.3.1	Definitions —	429
12.3.2	Main theorem —	431
12.4	Codimension growth of H -algebras —	435
12.5	Isomorphism of simple H -algebras —	436
12.5.1	Action by automorphisms and antiautomorphisms —	437
12.5.2	Action by derivations —	437
12.5.3	Generalized action —	437
13	Engel Lie algebras —	439
13.1	Local Engel problem —	439
13.1.1	Olshanskii's proof of Golod's example —	441
13.1.2	Petrogradsky's Fibonacci restricted Lie algebra —	443
13.2	Global Engel problem —	451
13.2.1	Mishchenko's exponentially growing Engel Lie algebras —	452
13.2.2	Local nilpotence. Restricted Burnside problem —	457
14	Miscellaneous topics —	461
14.1	Finite basis problem —	461
14.2	Otto Kegel's problem —	462
14.3	Identities of simple Lie algebras —	464
14.3.1	The isomorphism problem —	464
14.3.2	Identities of Cartan-type Lie algebras —	465
14.3.3	Capelli identities —	467
14.4	Special Lie algebras and generalizations —	469
14.4.1	Identities in the enveloping algebras —	471
14.4.2	API-algebras —	474
14.5	Automorphisms and derivations —	475

- 14.5.1 Automorphisms of the algebras L/R^k — 476
- 14.5.2 Shmelkin's wreath products and automorphisms — 481

Bibliography — 491
