

Table of Contents

Abstract	v
List of Abbreviations and Symbols.....	xi
1 Motivation	1
2 Theoretical Background	5
2.1 <i>In situ</i> measurement techniques in heterogeneous catalysis	5
2.2 Principle of X-ray diffractometry.....	9
2.3 Principle of NMR spectroscopy	12
2.3.1 Types of interaction	17
2.3.1.1 Zeeman interaction.....	19
2.3.1.2 Radiofrequency field.....	20
2.3.1.3 Chemical shift	20
2.3.1.4 Direct dipolar coupling	24
2.3.1.5 Indirect dipolar coupling	25
2.3.1.6 Electric quadrupolar coupling	26
2.4 Basics of solid-state NMR spectroscopy	30
2.4.1 Magic-angle spinning	31
2.4.2 Dipolar decoupling	32
2.5 Pulse sequences in high-resolution solid-state NMR.....	33
2.5.1 Single pulse sequence	34
2.5.2 Cross polarization	34
2.5.3 Total suppression of spinning sidebands	36
2.6 State of the art of <i>in situ</i> solid-state NMR spectroscopy under continuous flow conditions.....	38
2.7 Materials studied in this work	42
2.7.1 The aluminophosphates VPI-5 and $\text{AlPO}_4\text{-8}$	42
2.7.2 Metal-organic frameworks	45
2.7.2.1 MIL-53.....	51
2.7.2.2 MIL-53-ADP	54
2.7.2.3 MIL-53-FA.....	54
3 Scope of the Work	57
4 Experimental Section.....	61

4.1	Synthesis of the studied materials	61
4.1.1	VPI-5	61
4.1.2	MIL-53.....	61
4.1.3	MIL-53-ADP.....	61
4.1.4	MIL-53-FA.....	62
4.2	Physicochemical characterization	62
4.3	<i>Ex situ</i> solid-state NMR adsorption studies.....	65
4.4	<i>In situ</i> PXRD studies of structural transformations.....	66
4.4.1	Transformation of VPI-5 to $\text{AlPO}_4\text{-8}$	66
4.4.2	Water ad- and desorption on MIL-53-type MOFs.....	67
4.4.3	Ad- and desorption of CO_2 on MIL-53-ADP and MIL-53-FA....	69
4.5	<i>In situ</i> solid-state NMR spectroscopy under continuous flow conditions.....	70
4.5.1	Probe electronics.....	71
4.5.2	Rotor design and flow profile.....	72
4.5.3	Laser specifications for heating	74
4.5.4	Measurement set-up	76
4.5.5	Transformation of VPI-5 to $\text{AlPO}_4\text{-8}$	78
4.5.6	Water adsorption on MIL-53-type MOFs.....	79
4.6	Analysis of the recrystallization kinetics.....	80
5	Results and Discussion	83
5.1	Characterization of the synthesized materials	83
5.1.1	VPI-5	83
5.1.2	MIL-53.....	86
5.1.3	MIL-53-ADP.....	90
5.1.4	MIL-53-FA.....	93
5.2	<i>In situ</i> solid-state NMR spectroscopy under continuous flow conditions.....	97
5.2.1	Calibration of the flow probe	97
5.2.2	Temperature calibration of the sample in the rotor	99
5.3	Structural transformation of VPI-5 to $\text{AlPO}_4\text{-8}$	103
5.3.1	<i>In situ</i> NMR study of the structural transformation	103
5.3.2	<i>In situ</i> XRD study of the structural transformation	108

5.4	Breathing behavior of isoreticular MOFs with MIL-53-type topology	114
5.4.1	<i>Ex situ</i> solid-state NMR spectroscopy of CO ₂ adsorbed on samples with MIL-53-type topology	115
5.4.2	<i>In situ</i> investigations of the MIL-53 breathing behavior	118
5.4.2.1	<i>In situ</i> solid-state NMR of the MIL-53 hydration	119
5.4.2.2	<i>In situ</i> XRD study of the MIL-53 hydration	120
5.4.3	Structural transformation of MIL-53-ADP on sorption of water and CO ₂	128
5.4.3.1	<i>In situ</i> solid-state NMR of the de- and rehydration of MIL-53-ADP	128
5.4.3.2	<i>In situ</i> XRD study of the sorption of water on MIL-53-ADP	132
5.4.3.3	<i>In situ</i> XRD study of the sorption of CO ₂ on MIL-53-ADP	142
5.4.4	Behavior of MIL-53-FA upon adsorption of water and CO ₂	148
5.4.4.1	<i>In situ</i> solid-state NMR spectroscopy of the breathing behavior of MIL-53-FA	148
5.4.4.2	<i>In situ</i> XRD study of the sorption of water in MIL-53-FA	152
5.4.4.3	<i>In situ</i> XRD study of the adsorption of CO ₂ in MIL-53-FA	157
5.4.5	Comparison of the breathing behavior of the three isoreticular MOFs	160
5.5	Valuation of the <i>in situ</i> NMR probe	163
6	Summary	167
7	Perspectives	173
8	Zusammenfassung	175
	List of References	183
