

Contents

1	Gravitation and Newton's Laws	1
1.1	From Pythagoras to the Middle Ages	2
1.2	Copernicus, Kepler, and Galileo	6
1.3	Newton and Modern Science	12
1.4	Newton's Laws	14
1.4.1	Newton's First Law	15
1.4.2	Newton's Second Law	15
1.4.3	Planetary Motion in Newton's Theory	24
1.4.4	Newton's Third Law	26
1.5	Conservation Laws	27
1.5.1	Conservation of Linear Momentum	28
1.5.2	Conservation of Angular Momentum	29
1.5.3	Conservation of Energy	30
1.6	Degrees of Freedom	35
1.7	Inertial and Non-inertial Systems	36
1.8	Rigid Bodies	40
1.9	The Principle of Least Action	42
1.10	Hamilton Equations	46
1.11	Complements on Gravity and Planetary Motion	48
1.12	Advice for Solving Problems	57
	Problems	59
	Literature	60
2	Entropy, Statistical Physics, and Information	63
2.1	Thermodynamic Approach	64
2.1.1	First Law of Thermodynamics	65
2.1.2	Second Law of Thermodynamics	66
2.1.3	Third Law of Thermodynamics	67
2.1.4	Thermodynamic Potentials	67

2.2	Statistical Approach	68
2.3	Entropy and Statistical Physics	74
2.4	Temperature and Chemical Potential	76
2.5	Statistical Mechanics	77
2.5.1	Canonical Ensemble	79
2.5.2	Maxwell Distribution	85
2.5.3	Grand Canonical Ensemble	86
2.6	Entropy and Information	87
2.7	Maxwell’s Demon and Perpetuum Mobile	89
2.8	First Order Phase Transitions	96
	Problems	98
	Literature	99
3	Electromagnetism and Maxwell’s Equations	101
3.1	Coulomb’s Law	103
3.2	Electrostatic and Gravitational Fields	106
3.3	Conductors, Semiconductors, and Insulators	107
3.4	Magnetic Fields	108
3.5	Magnetic Flux	110
3.6	Maxwell’s Equations	111
3.6.1	Gauss’s Law for Electric Fields	111
3.6.2	Gauss’s Law for Magnetism	112
3.6.3	Faraday’s Law	114
3.6.4	Ampère–Maxwell Law	115
3.7	Lorentz Force	116
3.8	Fields in a Medium	120
3.9	Magnetic Properties	123
3.9.1	Diamagnetism	124
3.9.2	Paramagnetism	124
3.9.3	Ferromagnetism	125
3.9.4	Ferrimagnetism, Antiferromagnetism, and Magnetic Frustration	126
3.9.5	Spin Ices and Monopoles	127
3.10	Second Order Phase Transitions	128
3.11	Spontaneous Symmetry Breaking	128
3.12	Superconductivity	130
3.13	Meissner Effect: Type I and II Superconductors	131
3.14	Appendix of Formulas	132
	Problems	134
	Literature	134

4	Electromagnetic Waves	137
4.1	Waves in a Medium and in $\text{\AA}$ ther	138
4.2	Electromagnetic Waves and Maxwell's Equations	139
4.2.1	Wave Propagation	141
4.2.2	Coherence	142
4.3	Generation of Electromagnetic Waves	143
4.3.1	Retarded Potentials	143
4.3.2	Mechanisms Generating Electromagnetic Waves	144
4.4	Wave Properties	145
4.4.1	Interference	145
4.4.2	Diffraction	148
4.4.3	Polarization	152
4.4.4	Spectral Composition	154
4.5	Fourier Series and Integrals	157
4.6	Reflection and Refraction	159
4.7	Dispersion of Light	161
4.8	Black Body Radiation	162
	Problems	165
	Literature	165
5	Special Theory of Relativity	167
5.1	Postulates of Special Relativity	168
5.2	Lorentz Transformations	171
5.3	Light Cone and Causality	176
5.4	Contraction of Lengths	177
5.5	Time Dilation: Proper Time	178
5.6	Addition of Velocities	181
5.7	Relativistic Four-Vectors	182
5.8	Electrodynamics in Relativistically Covariant Formalism	184
5.9	Energy and Momentum	186
5.10	Photons	188
5.11	Neutrinos	189
5.12	Tachyons and Superluminal Signals	190
5.13	The Lagrangian for a Particle in an Electromagnetic Field	192
	Problems	193
	Literature	194
6	Atoms and Quantum Theory	197
6.1	Motion of a Particle	197
6.2	Evolution of the Concept of Atom	200
6.3	Rutherford's Experiment	200
6.4	Bohr's Atom	201
6.5	Schrödinger's Equation	204
6.6	Wave Function	208

6.7	Operators and States in Quantum Mechanics	214
6.8	One-Dimensional Systems in Quantum Mechanics	219
6.8.1	The Infinite Potential Well	219
6.8.2	Quantum Harmonic Oscillator	220
6.8.3	Charged Particle in a Constant Magnetic Field	224
6.9	Emission and Absorption of Radiation	225
6.10	Stimulated Emission and Lasers	226
6.11	Tunnel Effect	228
6.12	Indistinguishability and Pauli’s Principle	229
6.13	Exchange Interaction	230
6.14	Exchange Energy and Ferromagnetism	231
6.15	Distribution of Electrons in the Atom	231
6.16	Quantum Measurement	233
6.16.1	U and R Evolution Procedures	234
6.16.2	On Theory and Observable Quantities	235
6.17	Paradoxes in Quantum Mechanics	236
6.17.1	De Broglie’s Paradox	236
6.17.2	Schrödinger’s Cat Paradox	237
6.17.3	Toward the EPR Paradox	238
6.17.4	A Hidden Variable Model and Bell’s Theorem	240
6.17.5	Bell Inequality and Conventional Quantum Mechanics	242
6.17.6	EPR Paradox: Quantum Mechanics Versus Special Relativity	242
6.18	Quantum Computation and Teleportation	244
6.19	Classical vs. Quantum Logic	245
	Problems	246
	Literature	247
7	Quantum Electrodynamics	249
7.1	Dirac Equation	249
7.1.1	The Spin of the Electron	249
7.1.2	Hydrogen Atom in Dirac’s Theory	255
7.1.3	Hole Theory and Positrons	256
7.2	Intermezzo: Natural Units and the Metric Used in Particle Physics	259
7.3	Quantized Fields and Particles	260
7.4	Quantum Electrodynamics (QED)	264
7.4.1	Unitarity in Quantum Electrodynamics	265
7.4.2	Feynman Diagrams	267
7.4.3	Virtual Particles	268
7.4.4	Compton Scattering	270
7.4.5	Electron Self-energy and Vacuum Polarization	272
7.4.6	Renormalization and Running Coupling Constant	275

7.5	Quantum Vacuum and Casimir Effect	277
7.6	Principle of Gauge Invariance	279
7.7	<i>CPT</i> Symmetry	283
7.8	Grassmann Variables	284
	Problems	286
	Literature	286
8	Fermi–Dirac and Bose–Einstein Statistics	289
8.1	Fermi–Dirac Statistics	289
8.2	Fermi–Dirac and Bose–Einstein Distributions	291
8.3	The Ideal Electron Gas	293
8.4	Heat Capacity of Metals	295
8.5	Metals, Semiconductors, and Insulators	298
8.6	Electrons and Holes	299
8.7	Applications of the Fermi–Dirac Statistics	299
	8.7.1 Quantum Hall Effect	299
	8.7.2 Graphene	306
8.8	Bose–Einstein Statistics	308
8.9	Einstein–Debye Theory of Heat Capacity	309
8.10	Bose–Einstein Condensation	312
8.11	Quantum Coherence	315
8.12	Nonrelativistic Quantum Gases	316
	Problems	319
	Literature	320
9	Four Fundamental Forces	321
9.1	Gravity and Electromagnetism	321
9.2	Atomic Nuclei and Nuclear Phenomena	322
9.3	Strong Interactions	324
9.4	Weak Interactions	326
9.5	Parity Non-Conservation in Beta Decay	327
9.6	Violation of <i>CP</i> and <i>T</i> Invariance	329
9.7	Some Significant Numbers	331
9.8	Death of Stars	333
9.9	Neutron Stars and Pulsars	335
	Problems	336
	Literature	337
10	General Relativity and Cosmology	339
10.1	Principle of Equivalence and General Relativity	340
10.2	Gravitational Field and Geometry	342
10.3	Affine Connection and Metric Tensor	349
10.4	Gravitational Field Equations	351
10.5	Cosmology	354

10.6	Gravitational Radius and Collapse	358
10.6.1	Wormholes	362
10.6.2	Dark Matter, Dark Energy, and Accelerated Expansion	363
10.7	Gravitation and Quantum Effects	364
10.8	Cosmic Numbers	365
	Problems	366
	Literature	367
11	Unification of the Forces of Nature	369
11.1	Theory of Weak Interactions	369
11.2	Yang–Mills Fields	373
11.3	Nambu–Goldstone Theorem	376
11.4	Brout–Englert–Higgs Mechanism	378
11.5	Glashow–Salam–Weinberg Model	379
11.6	Electroweak Phase Transition	384
11.7	Hadrons and Quarks	385
11.8	Neutrino Oscillations and Masses	390
11.9	Quantum Chromodynamics	393
11.10	Grand Unification	396
11.11	Inflation	398
11.12	Supersymmetry and Superstrings	399
	Problems	402
	Literature	403
12	Physics and Life	405
12.1	Order and Life	405
12.2	Life and Fundamental Interactions	409
12.3	Homochirality: Biological Symmetry Breaking	409
12.4	Neutrinos and Beta Decay	411
12.5	Anthropic Principle	413
12.6	Search for Extraterrestrial Life	414
	Literature	416
	Appendix: Solutions of the Problems	417
