Summary	v
Zusammenfassung	viii
Table of Contents.....	xi
List of Figures	xiv
List of Tables	xvi
1 General Introduction	1
1.1 Biogas production in agriculture	2
1.2 Characteristics of biogas production systems in different parts of the world	2
1.2.1 Globally	2
1.2.2 European Union	3
1.2.3 United States of America (USA)	4
1.2.4 Asia	4
1.2.4.1 Malaysia	4
1.2.4.2 China	5
1.2.5 Africa	5
1.2.5.1 Ethiopia	5
1.3 Life Cycle Assessment (LCA) as a method for assessment of the environmental impacts	5
1.4 Problem statement	6
1.5 Objective and structure of the study	7
1.6 References	8
2 Part I: Life cycle assessment of energy generation of biogas fed combined heat and power plants: Environmental impact of different agricultural substrates	12
2.1 Abstract	12
2.2 Introduction	12
2.3 Material and methods	14
2.3.1 Goal and scope	14
2.3.2 Method	14
2.3.3 Life cycle inventory analysis (LCI)	16
2.3.4 System boundaries and system expansion	16
2.3.5 Sensitivity analysis	18
2.3.6 Life cycle impact assessment (LCIA)	19
2.4 Results and discussion	19
2.4.1 Global Warming Potential	19
2.4.2 Sensitivity analysis	20
2.4.3 Acidification Potential and Eutrophication Potential	21
2.5 Concluding remarks	23
2.6 Practical application	24

2.7	References	24
3	Part II: Life cycle assessment (LCA) of biogas versus dung combustion household cooking systems in developing countries - A case study in Ethiopia	28
3.1	Abstract	28
3.2	Introduction	28
3.3	Material and methods	30
3.3.1	LCA modeling	30
3.3.2	System definition	31
3.3.3	Life cycle inventory	33
3.3.4	Impact assessment	35
3.3.5	Sensitivity analysis	35
3.3.6	Scenario analysis	36
3.4	Results and discussion	37
3.4.1	Primary energy demand (PED)	37
3.4.2	Global warming potential (GWP)	37
3.4.3	Eutrophication potential (EP)	38
3.4.4	Acidification potential (AP)	39
3.4.5	Human toxicity potential (HTP)	39
3.4.6	Terrestrial ecotoxicity potential (TETP)	39
3.4.7	Sensitivity analysis	40
3.4.8	Scenario analysis	41
3.4.9	Limitations of the study	41
3.5	Conclusion and outlook	42
3.6	References	43
4	Part III: Potential of biogas production from processing residues to reduce environmental impacts from cassava starch and crisp production – a case study from Malaysia	47
4.1	Abstract	47
4.2	Introduction	47
4.3	Materials and Methods	49
4.3.1	Description of the system under study	49
4.3.1.1	Feedstock for production of starch, crisps and biogas	49
4.3.1.2	Processing of roots	50
4.3.1.3	Cassava leaves	51
4.3.1.4	Biogas production and utilization	52
4.3.2	Life cycle inventory (LCI)	52
4.3.2.1	Goal, scope and functional unit	52
4.3.2.2	System boundaries	52
4.3.2.3	Scenarios	54
4.3.2.4	LCI data	54
4.3.2.4.1	Nitrous oxide (N ₂ O)	55
4.3.2.4.2	Phosphorus emissions to water	57
4.3.2.4.3	Heavy metal emissions	57
4.3.2.4.4	Pesticide emissions	57
4.3.3	Life cycle impact assessment (LCIA) method	57
4.4	Results	57

4.4.1 Cassava cultivation	57
4.4.1.1 Cassava Processing and the Utilization of Processing Residues for Biogas Production	59
4.5 Conclusions	62
4.6 References	63
5 Discussion	67
5.1 Environmental impacts of different agricultural feedstock used in anaerobic digestion	68
5.2 Life cycle assessment (LCA) of biogas versus dung combustion household cooking systems in developing countries - a case study in Ethiopia.....	68
5.3 Potential of biogas production from processing residues to reduce environmental impacts from cassava starch and novel food products – a case study from Malaysia	69
5.4 Influence of methodological choices and assumptions	69
5.5 Uncertainties.....	70
5.6 Outlook	70
5.7 References	71
Curriculum vitae.....	74
