Zusammenfassung	VII
Abstract	IX
1 Introduction	1
2 Fundamentals from Modeling	7
2.1 Mechanical Modeling – Multibody Systems	8
2.2 Information Modeling	11
2.2.1 Graphs	11
2.2.2 Paths, Trajectories, and Motion Planning	16
2.2.3 Convex Polytopes and Convexity	18
2.2.4 Workspace Modeling	21
3 Fundamentals from Distributed Control and Organization	25
3.1 Optimization	26
3.2 Model Predictive Control	30
3.2.1 The Concept of Model Predictive Control	30
3.2.2 Distributed MPC	38
3.3 Graph-Algebraic Control	43
4 Designing a Scheme for Cooperative Robotic Behavior	47
4.1 Defining Features of Distributed Cooperative Behavior	47
4.2 Approach and System Architecture	49
4.3 A Custom Mobile Robot for Cooperative Tasks	53
4.3.1 Hardware Design	54

4.3.2	Mechanical Model	56
4.3.3	Simulative Analysis	61
5	Distributed Control and Organization for Cooperative Robotic Behavior	67
5.1	Formation Control	69
5.1.1	DMPC-Based Formation Controller	71
5.1.2	Graph-Algebraic Formation Controller	77
5.1.3	Practical Considerations	81
5.1.4	Comparative Analysis	83
5.2	Organization for Cooperative Transportation	94
5.2.1	Formation Synthesis	95
5.2.2	Negotiation	107
5.3	Mapping and Path Planning	109
5.3.1	Individual Navigation	109
5.3.2	Global Navigation	111
6	Results from Cooperative Transportation	117
6.1	Simulative Investigation	117
6.2	Experimental Investigation	127
6.3	Transportation Through Obstacle-Ridden Environments	134
7	Conclusion and Outlook	139
	Appendix	143
A.1	Expressions in the DMPC Formation Controller	143
	Abbreviations, Symbols, and Notation	145
	Bibliography	149
