1	Introduction	1
2	State of the Art on the Interaction between Granular Media and Fluid	3
2.1	Numerical Simulation of Fluids and Granular Material	3
2.1.1	Macroscopic or continuum approach	4
2.1.2	Mesoscopic Boltzmann approach	6
2.1.3	Discontinuum approach	7
2.1.4	Hybrid approaches	9
2.1.5	Discussion	10
2.2	Interaction between Fluid and Granular Particles	11
2.2.1	Forces on a single particle in fluid flow	11
2.2.2	Particle-fluid interaction at a particle group	17
2.2.3	Discussion	21
3	Research Objectives and Methodology	23
4	Numerical Fundamentals of the Coupled CFD-DEM Method	27
4.1	Discrete Element Method - Disperse Phase	27
4.1.1	Governing Equations	28
4.1.2	Contact detection	30
4.2	Coupled CFD-DEM - Fluid-Particle Interaction	31
4.2.1	Governing Equations	31
4.2.2	Momentum exchange model and coupling algorithm	32
4.2.3	Interaction forces	33
4.2.4	Voidfraction estimation	33
4.2.5	Smoothing	34
4.2.6	Turbulence modelling	34
5	Sedimentation of Spheres	37
5.1	Fundamentals of Sedimentation	37
5.2	Development of numerical model	41
5.2.1	Spatial discretisation	42
5.2.2	Parametrisation fluid phase	43
5.2.3	Parametrisation particle phase	44
5.2.4	Coupling properties	46
5.3	Numerical Simulation of the Sedimentation of a Single Particle	46
5.3.1	Sensitivity study	46

5.3.2	Results of the sedimentation process	55
5.4	Conclusion	60
6	Investigations of Granular Flows: Collapse of a Particle Column	61
6.1	Fundamentals of Granular Slumping	62
6.2	Physical Tests on the Column Collapse under Dry Conditions	65
6.2.1	Fundamentals about the PIV analysis	65
6.2.2	Test setup and evaluation for slow collapse tests	66
6.2.3	Test results of slow collapse	69
6.2.4	Test setup and evaluation for fast collapse tests	77
6.2.5	Test results of fast collapse	78
6.3	Numerical Simulation of the Column Collapse under Dry Conditions	84
6.3.1	Development of a numerical model for slow collapse	84
6.3.2	Results of numerical simulation of slow collapse	87
6.3.3	Sensitivity study on slow collapse	98
6.3.4	Conclusion for slow collapse simulation	113
6.3.5	Development of numerical model for fast collapse	115
6.3.6	Numerical simulation of fast collapse	117
6.3.7	Sensitivity study on fast collapse	125
6.3.8	Conclusion for fast collapse simulation	136
6.4	Physical Tests on the Submerged Column Collapse	138
6.4.1	Test setup and evaluation for fast collapse tests	139
6.4.2	Test results of fast collapse under submerged conditions	139
6.5	Numerical Simulation of the Submerged Column Collapse	145
6.5.1	Development of numerical model	145
6.5.2	Results of fast collapse simulation under submerged conditions	148
6.5.3	Variation of drag force model	157
6.6	Conclusion	160
7	Investigations on the Initiation of Sediment Transport	167
7.1	Fundamentals on Boundary Layer Flow	168
7.1.1	Boundary layer flow at a smooth surface	168
7.1.2	Boundary layer flow over rough walls	172
7.1.3	Boundary layer flow over permeable particle systems	176
7.2	Fundamentals on Incipient Motion of Particle Transport	181
7.2.1	Incipient motion on a micro scale	182
7.2.2	Incipient motion on empirical thresholds: Sediment transport models	189
7.3	Physical Tests on Incipient Motion on a Particle Bed	194
7.3.1	Setup of physical tests	195
7.3.2	Analysis of the external flow field in the physical tests	200
7.3.3	Analysis of flow characteristics according to boundary layer flow theory	208
7.3.4	Analysis of motion threshold in physical tests	211
7.4	Numerical Simulations on Incipient Motion	212
7.4.1	Flow over a rough surface with a CFD approach	213
7.4.2	Flow over a rough surface with the coupled CFD-DEM approach	218

Contents	XIX
7.4.3 Erosion processes on a particle bed with the coupled CFD-DEM . .	225
7.5 Conclusion and Discussion	227
8 Summary and Outlook	231
