Foreword *xiii*

Preface *xv*

Foreword *xvii*

1	Introductory NMR Concepts	1
1.1	Historical Aspects	1
1.2	Basic Description of NMR Spectroscopy	5
1.2.1	Nuclear Spins and Nuclear Zeeman Effect	8
1.2.2	Spin Ensembles	11
1.2.3	Single Pulse Experiment, Bloch Equations, and Fourier Transformation	17
1.2.4	Populations and Coherences	27
1.3	Liquid-state NMR Spectroscopy: Basic Concepts	29
1.3.1	Chemical Shift	29
1.3.2	Indirect Spin-Spin Coupling and Spin Decoupling	32
1.3.3	Nuclear Spin Relaxation	38
1.3.4	Nuclear Overhauser Effect	44
1.4	Liquid-state NMR Spectroscopy: Some Experiments	47
1.4.1	Relaxation Experiments	47
1.4.2	Insensitive Nuclei Enhanced by Polarization Transfer	53
1.4.3	2D NMR Spectroscopy	53
1.4.4	Chemical Exchange	57
1.5	Solid Materials and NMR Spectroscopy	63
	References	69
2	Mathematical and Quantum-mechanical Tools	73
2.1	Definitions and Basic Concepts	73
2.1.1	Operators and Functions	73
2.1.2	Eigenvalue Equations	74
2.1.3	Eigenstates and Superposition States: Pure and Mixed Ensembles	75
2.1.4	Nuclear Spin and Angular Momentum	76

2.2	Rotations and Frame Transformations	77
2.2.1	Active and Passive Transformations	78
2.2.2	Rotation Operators	78
2.2.3	Rotation Matrices and Euler Angles	79
2.3	Time-Independent Features: Energy Levels and Related Aspects	81
2.3.1	Time-Independent Schrödinger Equation and Spin Hamiltonians	81
2.3.2	Time-Independent Perturbation Theory	81
2.3.3	Matrix Representation of Operators and Density Matrix Theory	83
2.3.3.1	Isolated Nucleus with Spin $1/2$	84
2.3.3.2	Isolated Nucleus with Spin 1	87
2.3.3.3	Pair of Coupled Nuclei with Spin $1/2$	87
2.3.4	Spin Temperature	89
2.4	Dealing with Time Dependence	90
2.4.1	Time-Dependent Schrödinger and Liouville–von Neumann Equations	90
2.4.2	Average Hamiltonian Theory	91
	References	93
3	Nuclear Spin Interactions	95
3.1	Introduction	95
3.2	Interactions with External Magnetic Fields	97
3.3	Internal Interactions	100
3.3.1	Shielding or Chemical Shift Interaction	100
3.3.2	Knight Shift Interaction	105
3.3.3	Quadrupolar Interaction	106
3.3.4	Dipolar Coupling	112
3.3.5	Indirect Spin–Spin (J) Coupling	116
3.3.6	Paramagnetic Coupling	117
	References	119
4	Broadline NMR Spectroscopy	121
4.1	Introductory Remarks	121
4.2	Finite Pulse Duration and Adiabatic Pulses	133
4.2.1	Finite Pulse Duration: Excitation Profile and Spectral Distortions	133
4.2.2	Adiabatic Pulses	138
4.3	Inhomogeneous and Homogeneous Line Broadening Mechanisms	141
4.4	Dilute Spin- $1/2$ Nuclei	142
4.4.1	Broadline NMR Spectra	142
4.4.2	Cross-polarization	149
4.4.2.1	Pulse Sequence and Hartmann–Hahn Conditions	149
4.4.2.2	CP Explained by AHT	151
4.4.2.3	CP Explained by the Thermodynamic Model	157
4.4.2.4	CP Dynamics	160
4.4.2.5	CP-related Techniques	167
4.4.3	Heteronuclear Spin Decoupling	169

4.4.3.1	CW Heteronuclear Spin Decoupling Explained by AHT	171
4.4.3.2	Beyond CW: Off-resonance Effects and Pulse Decoupling Schemes	172
4.4.4	Echo Experiments	176
4.5	Abundant Spin-1/2 Nuclei	184
4.5.1	Broadline NMR Spectra	184
4.5.2	Spin Diffusion	187
4.5.2.1	Fick's Equation of Diffusion	187
4.5.2.2	The Goldman–Shen Experiment	189
4.5.2.3	Influence of Spin Diffusion on Spin-Lattice Relaxation Times	191
4.5.3	Moment Analysis	192
4.5.4	Echo Experiments for Refocusing the Homonuclear Dipolar Interaction	194
4.5.4.1	Solid Echo	194
4.5.4.2	Magic-sandwich Echo	197
4.6	Quadrupolar Nuclei	200
4.6.1	Broadline NMR Spectra	200
4.6.2	Selective and Non-selective RF Pulses	205
4.6.3	Cross-polarization	209
4.6.4	Echo and Sensitivity Enhancement Experiments	210
4.6.4.1	Quadrupolar Echo	210
4.6.4.2	Solomon and Hahn Echoes	211
4.6.4.3	Quadrupolar Carr–Purcell–Meiboom–Gill	218
4.6.4.4	Other Sensitivity Enhancement Techniques	219
	References	224
5	1D High-resolution Solid-state NMR Spectroscopy	227
5.1	Dilute Spin-1/2 Nuclei	227
5.1.1	Sample Rotation	228
5.1.2	Spinning Sideband Suppression	236
5.1.3	Heteronuclear Spin Decoupling and Sample Spinning	244
5.1.4	Cross-polarization and Sample Spinning	257
5.1.5	Basic Pulse Experiments Under MAS Conditions	268
5.1.5.1	Pulse Sequences for the Measurement of Relaxation Times	269
5.1.5.2	Pulse Sequences for Spectral Editing: Distinguishing Components with Different Dynamic Properties	270
5.1.5.3	Pulse Sequences for Spectral Editing: Distinguishing Rare Nuclei With Different Chemical Bonds	271
5.1.5.4	Pulse Sequences for Quantitative Determinations: CP vs SPE	273
5.2	Abundant Spin-1/2 Nuclei	275
5.2.1	Sample Rotation	275
5.2.2	Multiple Pulse Experiments	275
5.2.3	Combined Pulse and Sample Rotation Experiments	282
5.3	Quadrupolar Nuclei	289
5.3.1	Sample Rotation	289
5.3.2	Integer Spin Nuclei	290

5.3.3	Half-integer Spin Nuclei	291
5.3.3.1	CT Spectra	294
5.3.3.2	Double Angle Rotation	297
5.3.3.3	Satellite Transition Spectroscopy	300
5.3.4	Sensitivity Enhancement	301
	References	305
6	2D Solid-State NMR Spectroscopy	309
6.1	Basic Concepts	311
6.1.1	Basic Structure of 2D Experiments	311
6.1.2	Need for Recoupling	313
6.1.3	Double (Multiple) Quantum Spectroscopy	316
6.2	Experiments Based on Chemical Shift Anisotropy	317
6.2.1	MAH, MAT, 5- π , and Related Experiments	318
6.2.2	STAG, S ³ , SASS	321
6.2.3	VACSYS	322
6.2.4	TOSS-ReverseTOSS and 2D-PASS	322
6.2.5	CSA Amplification Methods	324
6.2.6	Pulse Sequences Recoupling Chemical Shift Anisotropy	326
6.2.7	Pulse Sequences for Abundant Spin-1/2 Nuclei	326
6.2.8	Rotary Resonance (RR)	328
6.3	Experiments Based on Heteronuclear Dipolar Coupling	329
6.3.1	Heteronuclear Correlation Through Dipolar Interaction	330
6.3.2	Separated Local Field (SLF)	333
6.3.3	Rotary Resonance Recoupling (R ³)	337
6.3.4	REDOR	337
6.3.5	REAPDOR and TRAPDOR	348
6.3.6	TEDOR	352
6.3.7	HARDSHIP	354
6.4	Experiments Based on Homonuclear Dipolar Coupling	355
6.4.1	WISE	355
6.4.2	Rotational Resonance (R ²)	358
6.4.3	Broadband Homonuclear Dipolar Recoupling	360
6.4.3.1	DRAMA and MELODRAMA	362
6.4.3.2	RFDR and SEDRA	365
6.4.3.3	2Q-HORROR, MSD-HORROR, and DREAM	366
6.4.3.4	BABA	370
6.4.3.5	Symmetry-based Recoupling Schemes: C7 and POST-C7	370
6.4.3.6	Dipolar Truncation and High-order Recoupling Schemes	371
6.4.4	Homonuclear Correlation Through Dipolar Interaction	372
6.5	Experiments Based on <i>J</i> -coupling	375
6.5.1	Heteronuclear Correlation Through <i>J</i> -coupling	376
6.5.2	Homonuclear Correlation Through <i>J</i> -coupling	378
6.6	Experiments Based on Quadrupolar Interaction	380
6.6.1	Nutation	380

6.6.2	DAH and DAS	381
6.6.3	MQMAS	384
6.6.4	STMAS	388
	References	391

7	Molecular Dynamics by Solid-State NMR	397
7.1	Experimental Observables and Motional Timescales	399
7.1.1	Spectral Lineshapes	399
7.1.1.1	High-Resolution Spectra	400
7.1.1.2	Powder Spectra	401
7.1.1.3	Spectra Acquired by “Exchange” Experiments	403
7.1.2	Relaxation Times in Solids	404
7.1.2.1	Spin–Spin Relaxation Times	406
7.1.2.2	Spin–Lattice Relaxation Times of Abundant Nuclei	409
7.1.2.3	Spin–Lattice Relaxation Times of Rare Nuclei	410
7.1.2.4	Dipolar and Quadrupolar Spin–Lattice Relaxation Times	411
7.1.2.5	Theory of Relaxation	412
7.1.3	Absolute Frequency Regimes	416
7.2	Motional Models	419
7.2.1	Models for Lineshape Analysis	419
7.2.2	Spectral Densities	422
7.2.3	Dependence of Correlation Times on Temperature	423
7.3	Broadline Experiments	424
7.3.1	Acquisition of 1D Spectra	425
7.3.2	Measurement of Relaxation Times	426
7.3.2.1	Spin–Spin Relaxation Times, FID Analysis, and DQ Techniques	426
7.3.2.2	Spin–Lattice Relaxation Times	432
7.3.3	Other Techniques	435
7.3.3.1	Stationary Stimulated Echo	436
7.3.3.2	2D Exchange	436
7.3.3.3	Spin Alignment	437
7.4	High-Resolution Experiments	438
7.4.1	Acquisition of 1D and 2D Spectra	438
7.4.1.1	1D Chemical Exchange	438
7.4.1.2	Line Broadening from Interferences	439
7.4.1.3	Lineshapes from 2D Experiments	440
7.4.2	Measurement of Relaxation Times	440
7.4.2.1	Abundant Nuclei	440
7.4.2.2	Rare Nuclei	441
7.4.3	Other Techniques	442
7.4.3.1	2D Chemical Exchange	442
7.4.3.2	1D and 2D Exchange of Spinning Sidebands	442
7.4.3.3	CODEX	443
	References	444

8	Application of SSNMR to Selected Classes of Systems	447
8.1	Pharmaceuticals	447
8.1.1	Introduction	447
8.1.2	Polymorphs, Solvates, and Salts	449
8.1.3	Molecular Complexes and Cocrystals	454
8.1.4	NMR Crystallography	456
8.1.5	Molecular Dynamics	459
8.1.6	Disordered and Amorphous Forms	461
8.1.7	Identification of API Forms in Formulations	461
8.1.8	Miscibility and Interactions in Drug Formulations and Dispersions	463
8.2	Polymeric Materials	465
8.2.1	Introduction	465
8.2.2	Primary Structure	466
8.2.3	Secondary and Tertiary Structure	466
8.2.4	Phase Properties	470
8.2.4.1	Polymorphism	470
8.2.4.2	Heterophasicity	470
8.2.4.3	Phase Transformations	474
8.2.5	Interfaces and Domain Dimensions	474
8.2.6	Molecular Dynamics	479
8.2.6.1	Motions in Glassy and Crystalline Phases	480
8.2.6.2	Motions in Rubbers and Melts	481
8.3	Inorganic and Organic–Inorganic Materials	485
8.3.1	Introduction	485
8.3.2	Inorganic Systems	486
8.3.2.1	Silicates	486
8.3.2.2	Zeolites	489
8.3.2.3	Aluminophosphates	491
8.3.2.4	Amorphous Materials: Cements, Geopolymers, and Glasses	493
8.3.3	Organic–Inorganic Materials	497
8.3.3.1	Organometallic Complexes	497
8.3.3.2	Metal–Organic Frameworks	500
8.3.3.3	Organically Modified Fillers and Polymer/Filler Composites	502
8.4	Liquid Crystals and Model Membranes	507
8.4.1	Introduction	507
8.4.2	Mesogens and Mesophases	507
8.4.3	SSNMR Techniques for Investigating Mesophases	511
8.4.4	Orientational Order	515
8.4.5	Phase Structure	519
8.4.6	Molecular Dynamics	523
	References	525
