## Preface xvii

<b>1</b>	<b>Characterization of Protein Molecules Prepared by Total Chemical Synthesis</b>	<b>1</b>
	<i>Stephen B. H. Kent</i>	
1.1	Introduction	1
1.2	Chemical Protein Synthesis	2
1.3	Comments on Characterization of Synthetic Protein Molecules	8
1.3.1	Homogeneity	8
1.3.2	Amino Acid Sequence	9
1.3.3	Chemical Analogues	10
1.3.4	Limitations of SPPS	10
1.3.5	Folding as a Purification Step	10
1.4	Summary	12
	References	12
<b>2</b>	<b>Automated Fast Flow Peptide Synthesis</b>	<b>17</b>
	<i>Mark D. Simon, Alexander J. Mijalis, Kyle A. Totaro, Daniel Dunkelmann, Alexander A. Vinogradov, Chi Zhang, Yuta Maki, Justin M. Wolfe, Jessica Wilson, Andrei Loas, and Bradley L. Pentelute</i>	
2.1	Introduction	17
2.2	Results	19
2.2.1	Summary	19
2.2.1.1	Mechanical Principles	20
2.2.1.2	Chemical Principles	20
2.2.1.3	User Interface Principles	20
2.2.1.4	Data Analysis Method	20
2.2.1.5	Outcome	21
2.2.2	First-generation Automated Fast Flow Peptide Synthesis	21
2.2.2.1	Key Findings	21
2.2.2.2	Design of First-generation AFPS	21
2.2.2.3	Characterization of First-generation AFPS	23
2.2.3	Second-generation Automated Fast Flow Peptide Synthesis	24

2.2.3.1	Key Findings	24
2.2.3.2	Design of Second-generation AFPS	24
2.2.3.3	Characterization and Use of Second-generation AFPS	26
2.2.4	Third-generation Automated Fast Flow Peptide Synthesis	32
2.2.4.1	Key Findings	32
2.2.4.2	Design of Third-generation AFPS	34
2.2.4.3	Characterization of Third-generation AFPS	39
2.2.4.4	Reagent Stability Study	43
2.2.5	Fourth-generation Automated Fast Flow Peptide Synthesis	45
2.2.5.1	Key Findings	45
2.2.5.2	Effect of Solvent on Fast Flow Synthesis	45
2.2.5.3	Design and Characterization of Fourth-generation AFPS	45
2.3	Conclusions	49
	Acknowledgments	53
	References	53
<b>3</b>	<b><i>N,S</i>- and <i>N,Se</i>-Acyl Transfer Devices in Protein Synthesis</b>	<b>59</b>
	<i>Vincent Diemer, Jennifer Bouchenna, Florent Kerdraon, Vangelis Agouridas, and Oleg Melnyk</i>	
3.1	Introduction	59
3.2	<i>N,S</i> - and <i>N,Se</i> -Acyl Transfer Devices: General Presentation, Reactivity and Statistical Overview of Their Utilization	61
3.2.1	General Presentation of <i>N,S</i> - and <i>N,Se</i> -Acyl Transfer Devices	61
3.2.2	Relative Reactivity of <i>N,S</i> - and <i>N,Se</i> -Acyl Transfer Devices	63
3.2.3	A Statistical Overview of the Synthetic Use of <i>N,S</i> - and <i>N,Se</i> -Acyl Transfer Devices for Protein Total Chemical Synthesis	64
3.3	Preparation of SEA/SeEA <sup>off</sup> and SEALide Peptides	68
3.3.1	Preparation of SEA and SeEA Peptides	68
3.3.2	Preparation of SEALide Peptides	70
3.4	Redox-controlled Assembly of Biotinylated NK1 Domain of the Hepatocyte Growth Factor (HGF) Using SEA and SeEA Chemistries	71
3.5	The Total Chemical Synthesis of GM2-AP Using SEALide-based Chemistry	75
3.6	Conclusion	79
	References	80
<b>4</b>	<b>Chemical Synthesis of Proteins Through Native Chemical Ligation of Peptide Hydrazides</b>	<b>87</b>
	<i>Chao Zuo, Xiaodan Tan, Xianglong Tan, and Lei Liu</i>	
4.1	Introduction	87
4.2	Development of Peptide Hydrazide-based Native Chemical Ligation	88
4.2.1	Conversion of Peptide Hydrazide to Peptide Azide	88
4.2.2	Acyl Azide-based Solid-phase Peptide Synthesis	88
4.2.3	Acyl Azide-based Solution-phase Peptide Synthesis	89
4.2.4	The Transesterification of Acyl Azide	90

4.2.5	Development of Peptide Hydrazide-based Native Chemical Ligation	90
4.3	Optimization of Peptide Hydrazide-based Native Chemical Ligation	91
4.3.1	Preparation of Peptide Hydrazides	91
4.3.1.1	2-Cl-Trt-Cl Resin	91
4.3.1.2	Peptide Hydrazides from Expressed Proteins	92
4.3.1.3	Sortase-mediated Hydrazide Generation	93
4.3.2	Activation Methods of Peptide Hydrazide	94
4.3.2.1	Knorr Pyrazole Synthesis	94
4.3.2.2	Activation in TFA	94
4.3.3	Ligation Sites of Peptide Hydrazide	95
4.3.4	Multiple Fragment Ligation Based on Peptide Hydrazide	96
4.3.4.1	N-to-C Sequential Ligation	96
4.3.4.2	Convergent Ligation	96
4.3.4.3	One-pot Ligation	96
4.4	Application of Peptide Hydrazide-based Native Chemical Ligation	99
4.4.1	Peptide Drugs and Diagnostic Tools	99
4.4.1.1	Peptide Hydrazides for Cyclic Peptide Synthesis	99
4.4.1.2	Screening for $\alpha$ Peptide Inhibitors Targeting PD-L1	99
4.4.1.3	Chemical Synthesis of DCAF for Targeted Antibody Blocking	101
4.4.1.4	Peptide Toxins	101
4.4.2	Synthesis and Application of Two-photon Activatable Chemokine CCL5	102
4.4.3	Proteins with Posttranslational Modification	103
4.4.3.1	The Synthesis of Glycosylation-modified Full-length IL-6	103
4.4.3.2	The Chemical Synthesis of EPO	105
4.4.3.3	Chemical Synthesis of Homogeneous Phosphorylated p62	105
4.4.3.4	Chemical Synthesis of K19, K48 Bi-acetylated Atg3 Protein	105
4.4.4	Ubiquitin Chains	108
4.4.4.1	Synthesis of K27-linked Ubiquitin Chains	108
4.4.4.2	Synthesis of Atypical Ubiquitin Chains by Using an Isopeptide-linked Ub Isomer	109
4.4.4.3	Synthesis of Atypical Ubiquitin Chains Using an Isopeptide-linked Ub Isomer	109
4.4.5	Modified Nucleosomes	110
4.4.5.1	Synthesis of DNA-barcoded Modified Nucleosome Library	110
4.4.5.2	Synthesis of Modified Histone Analogs with a Cysteine Aminoethylation-assisted Chemical Ubiquitination Strategy	111
4.4.5.3	Synthesis of Ubiquitylated Histones for Examination of the Deubiquitination Specificity of USP51	111
4.4.6	Membrane Proteins	112
4.4.7	Mirror-image Biological Systems	112
4.5	Summary and Outlook	113
	References	114

<b>5</b>	<b>Expanding Native Chemical Ligation Methodology with Synthetic Amino Acid Derivatives</b>	<b>119</b>
	<i>Emma E. Watson, Lara R. Malins, and Richard J. Payne</i>	
5.1	Native Chemical Ligation	120
5.2	Desulfurization Chemistries	120
5.3	Aspartic Acid (Asp, D)	122
5.4	Glutamic Acid (Glu, E)	124
5.5	Phenylalanine (Phe, F)	125
5.6	Isoleucine (Ile, I)	127
5.7	Lysine (Lys, K)	130
5.8	Leucine (Leu, L)	133
5.9	Asparagine (Asn, N)	135
5.10	Proline (Pro, P)	138
5.11	Glutamine (Gln, Q)	139
5.12	Arginine (Arg, R)	139
5.13	Threonine (Thr, T)	140
5.14	Valine (Val, V)	142
5.15	Tryptophan (Trp, W)	144
5.16	Application of Selenocysteine (Sec) to Ligation Chemistry	146
5.17	Aspartic Acid (Asp, D)	147
5.18	Glutamic Acid (Glu, E)	148
5.19	Phenylalanine (Phe, F)	149
5.20	Leucine (Leu, L)	151
5.21	Proline (Pro, P)	151
5.22	Serine (Ser, S)	153
	References	155
 <b>6</b>	 <b>Peptide Ligations at Sterically Demanding Sites</b>	 <b>161</b>
	<i>Yinglu Wang and Suwei Dong</i>	
6.1	Introduction	161
6.2	Ligations Using Thioesters	162
6.2.1	Exogenous Additive-promoted Ligations	162
6.2.2	Ligations Using Reactive Thioesters	167
6.2.3	Internal Activation Strategy in Peptide Ligations	169
6.3	Ligations Using Oxo-esters	170
6.4	Peptide Ligations Based on Selenoesters	170
6.5	Microfluidics-promoted NCL	175
6.6	Representative Applications in Protein Synthesis	178
6.7	Summary and Outlook	181
	References	181
 <b>7</b>	 <b>Controlling Segment Solubility in Large Protein Synthesis</b>	 <b>185</b>
	<i>Riley J. Giesler, James M. Fulcher, Michael T. Jacobsen, and Michael S. Kay</i>	
7.1	Solvent Manipulation	185

7.2	Isoacyl Strategy	187
7.3	Semipermanent Solubilizing Tags	191
7.3.1	N- or C-Terminal Solubilizing “Tails”	192
7.3.2	Reversible Backbone Modifications as Solubilizing Tags	194
7.3.3	Building Block Solubilizing Tags	195
7.3.4	Extendable Side-chain-based Solubilizing Tags	195
	References	198
<b>8</b>	<b>Toward HPLC-free Total Chemical Synthesis of Proteins</b>	<b>211</b>
	<i>Phuc Ung and Oliver Seitz</i>	
8.1	Introduction	211
8.1.1	Capture and Release Purification	212
8.1.2	Solid-phase Chemical Ligations (SPCL)	212
8.2	Synthesis of Peptide Segments for Native Chemical Ligation	213
8.2.1	HPLC-free Preparation of N-terminal Peptide Segments for NCL	213
8.2.2	HPLC-free Preparation of C-terminal Peptide Segments for NCL	217
8.3	Synthesis of Proteins Using the His <sub>6</sub> Tag	220
8.3.1	Reversible His <sub>6</sub> -based Capture Tags	220
8.3.2	His <sub>6</sub> -based Immobilization for C-to-N Assembly of Crambin	221
8.3.3	His <sub>6</sub> -based Immobilization for Assembly of Proteins on Microtiter Plates	222
8.3.4	His <sub>6</sub> and Hydrazide Tags for Sequential N-to-C Capture and Release	225
8.4	Synthesis of Proteins via Oxime Formation	227
8.4.1	Reversible Oxime-based Capture Tags	227
8.4.2	Oxime-based Immobilization for N-to-C Solid-phase Chemical Ligations	227
8.4.3	Oxime-based Immobilization for C-to-N Solid-phase Chemical Ligations	233
8.4.4	Oxime-based C-to-N Solid-phase Chemical Ligations	237
8.5	Synthesis of Proteins via Hydrazone Formation	238
8.5.1	Reversible Hydrazone-based Capture Tags	238
8.5.2	Hydrazone-based Immobilization for Assembly of Proteins on Microtiter Plates	239
8.6	Synthesis of Proteins Using Click Chemistry	242
8.6.1	Click-based Immobilization for N-to-C Solid-phase Peptide Ligations Using a Protected Alkyne	242
8.6.2	Click-based Immobilization for N-to-C Solid-phase Peptide Ligations Using a Sea Group	243
8.7	Synthesis of Proteins Using the KAHA Ligation	244
8.7.1	The KAHA Ligation	244
8.7.2	HPLC-free Synthesis of Proteins Using the KAHA Ligation	245
8.8	Synthesis of Proteins Using Photocleavable Tags	246
8.8.1	Synthesis of Proteins Using a Photocleavable Biotin-based Purification Tag	246

8.8.2	Synthesis of Proteins Using a Photocleavable His <sub>6</sub> -based Purification Tag	247
8.9	Conclusion	249
