

Contents

1	Introduction	1
1.1	Initial Situation and Problem Definition	1
1.2	Objectives and Work Structure	3
1.3	Classification in the Fields of Information Systems and Research Methods	6
2	Simulation-Based Optimization	9
2.1	Modeling and Simulation	10
2.1.1	Continuous and Discrete Simulation	14
2.1.2	Hybrid Modeling and Simulation	19
2.2	Optimization Methods	24
2.2.1	Terminology in Optimization	25
2.2.2	Exact and Heuristic Optimization Methods	26
2.3	Combination of Simulation and Optimization Methods	28
2.3.1	Coupling and Interaction Modes of Simulation and Optimization	30
2.3.2	Objectives and Challenges of Simulation-based Optimization	32
2.3.3	Optimization Packages Interfaced With Simulation Software	35
3	Energy	39
3.1	Development of the Global Energy Market	40
3.2	The Concept of Energy	41
3.2.1	Work, Energy and Power	41
3.2.2	Energy Efficiency	49

3.2.3	Energy Consumption of Manufacturing Processes and Systems	50
3.3	Energy Costs	57
3.4	Energy Saving Potentials and Energy Efficiency in Manufacturing	61
3.4.1	Energy Saving Potentials in Manufacturing	61
3.4.2	Energy Performance Indicators	63
4	State of the Art	67
4.1	Selection and Evaluation of Relevant Research Approaches	68
4.1.1	General Limitations for the Selection of Research Approaches	71
4.1.2	Studies on the Optimization of the Energy Demand in Production Systems	72
4.1.3	Studies on Simulation-Based Modeling of the Energy Demand in Production Systems	75
4.1.4	Studies on Simulation-Based optimization of Energy Efficiency in Production	80
4.2	Comparison of Results and Discussion	83
4.3	Derivation of Research Demand	87
5	Development of a Simulation-based Methodology for Energy Efficiency Optimization	91
5.1	Concept Objective and Requirements	92
5.2	Conceptual Framework	94
5.3	Description of the M&S Approach	94
5.3.1	Production Flow Component	97
5.3.2	Machine Component	100
5.3.3	Energy Component	104
5.3.4	Interaction Point Definition	106
5.4	Description of the Optimization Approach	109
5.4.1	Energy Optimization Scenarios	111
5.4.2	Optimization Objectives	116
5.4.3	Optimization Parameters and Constraints	117
5.4.4	Interdependencies between the Simulation Model and the Optimization Process	119
5.5	Software Evaluation and Selection	121
5.5.1	Overview of Multi-method Simulators	122
5.5.2	Software Selection	123
5.6	Prototypical Implementation	126

5.6.1	Description of the Fictional Production Scenario	126
5.6.2	Simulation Model Details	128
5.6.3	Adaptions of the Simulation Model in Preparation for the Simulation-based Optimization of Energy Efficiency	132
5.6.4	Depiction of the Optimization Potential	136
5.6.5	Evaluation of the Optimization	145
5.6.6	Conclusions for the Practical Application of the Methodology	152
6	Experimental Validation of the Methodology	155
6.1	Presentation of the Practical Area of Application	156
6.1.1	Presentation of the Data Basis	156
6.1.2	Data Acquisition, Processing, and Validation	159
6.2	Simulation Model Details	163
6.3	Optimization Experiments	168
6.3.1	Optimization Parameter Adaptations	168
6.3.2	Simulation-based Optimization using the 1-Min Resolution Data	169
6.3.3	Simulation-based Optimization using the 1-sec Resolution	174
6.3.4	Examination of the Necessity of Combined Simulation in Practice	178
6.3.5	Summary and Evaluation of Simulation-based Optimization Results	184
6.3.6	Financial Evaluation of the Increase in Energy Efficiency	188
6.4	Recommendations for Action for Bosch Derived from the Simulation-based Optimization Methodology	190
6.5	Evaluation of the Practical Applicability of the Simulation-based Optimization Methodology	191
7	Summary and Outlook	195
7.1	Summary	195
7.2	Critical Appraisal of the Methodology	197
7.3	Outlook and Future Work	204
