1	Groundwork: Modeling Tools for Image Formation	1
1.1	Introduction	1
1.2	Orthonormal Functions: Fourier Transform Pairs	2
1.3	Point Sources and a Bandlimited Plane Wave	7
1.4	Coherent Optical Systems: Bandlimited Description	8
1.5	Coherent Transfer Matrix	11
1.6	Optical Similarity	13
1.7	Final Remarks	16
1.8	Problems	16
	References	17
2	Scalar Diffraction: Differential Operators, Matrices, and Eigen Functions	19
2.1	Wave Packet Solutions	19
2.2	Differential Diffraction Operator and its Eigen Functions	22
2.3	Paraxial Wave Optics	24
2.4	Evolution Operators: Some Analogies	26
2.5	Wave Aberrations: Differential Operators	32
2.6	Final Remarks	36
2.7	Problems	36
	References	37
3	Optical Linear Systems Under Coherent Illumination	39
3.1	Two Sets Conjugate Planes: Single Lens Processors	39
3.2	The Virtual Fraunhofer Diffraction Pattern	42
3.3	Preliminaries of Phase-Space Representations	50
3.4	Linear Systems Under Coherent Illumination	57
3.5	Concluding Remarks	61
	References	61

4	Relevant Parameters: Insightful Roadmaps	65
4.1	Visual Guides for Optical Engineering: Twisted Slit	66
4.2	Controllable Attenuations: Nonconventional Young Slits	71
4.3	Twisted Slits: A Potpourri of Applications	74
4.4	Final Remarks	76
	References	77
5	Optical Linear Systems Under Noncoherent Illumination	79
5.1	An Empirical Description: Linking Picture Dictionaries	79
5.2	Basic Postulates and Common Notations	84
5.3	In-register Superposition Process	91
5.4	The Lau Effect as a Noncoherent Optical Processor	97
5.5	Multiframe Photography	99
5.6	Concluding Remarks	103
5.7	Problems	104
	References	104
6	Figures of Merit: Tolerances and Aberration Balancing	107
6.1	The Strehl Ratio	108
6.2	McCutchen's Theorem: Axial Irradiance Distribution	110
6.3	Surrogate Apodizing Masks	113
6.4	Zero Axial Irradiance	115
6.5	Aberration Balancing: 1-D Case	116
6.6	Residual Aberrations: 1-D Case	121
6.7	Radially Symmetric Aberrations: Shortcut to Aberration Balancing	122
6.8	Optical Prefiltering and Digital Post-Filtering	124
6.9	Final Comments	130
	References	131
7	Eclectic Blueprints: Phase-Space Representations	135
7.1	The Product Space and the Product Spectrum	135
7.2	Wigner Distribution Function: Illustrative Applications	143
7.3	The WDF of Optical Systems	146
7.4	The Ambiguity Function: Displays of the MTF	148
7.5	Concluding Remarks	150
	References	151
8	Wavefront Engineering: Phase Conjugate Masks	155
8.1	Single Element Zoom System	155
8.2	Phase Conjugated Pairs: 1-D Masks	158
8.3	Phase Conjugated Pairs: 2-D Helical Masks	162
8.4	Amplitude Masks: 2-D Helical Attenuators	167
